**amazing tanks 2: The Blood Tub** Jonathan Walker, 2015-03-31 This controversial and stirring account of one of the bloodiest battles of the Great War recounts a heroic but disastrous engagement which left a lasting rift between the British and Australians. Drawing from a wealth of unpublished sources and eyewitness accounts, Jonathan Walker's study of the Battle of Bullecourt is vital to an understanding of the difficulties that faced Great War commanders. Central to The Blood Tub is a reassessment of Sir Hubert Gough, one of the Great War's most colourful generals. In the late spring of 1917, the Allies attacked at Arras, and a combined British and Australian force under General 'Thruster' Gough assaulted the fortress village of Bullecourt. Despite using the new wonder weapon, the tank, Gough's first attack ended in disaster and bitter recriminations. He then launched a second massive attack. For the next two weeks, the Battle of Bullecourt dominated British offensive action on the Western Front. It was the excessive brutality and ferocity of the hand-to-hand fighting that earned Bullecourt the name 'Blood Tub.'

**amazing tanks 2: Donny's Unauthorized Technical Guide to Harley-Davidson, 1936 to Present** Donny Petersen, 2010-03-01 Donny is the Winner of the 2012 International Book Awards. Donny Petersen has been educating motorcycle enthusiasts about Harley-Davidson bikes for years. Now, he has combined all his knowledge into a twelve-volume series masterpiece and this third book is one that every rider will treasure. Petersen, who has studied privately with Harley-Davidson engineers and has spent thirty-six years working on motorcycles, is sharing all of his secrets! As the founder of Toronto's Heavy Duty Cycles in 1974, North America's premier motorcycle shop, the dean of motorcycle technology teaches about the theory, design, and mechanical aspects of Harleys. In this third volume, discover: 1. How to identify the Evolution models. 2. Why the Evolution models are better. 3. Everything you need to know about engines. 4. Troubleshooting every facet of the Evolution. And so much more! The Harley-Davidson Evolution The Japanese had more than quality. Their arsenal included acceleration and speed combining with good braking and handling. They could design, tool-up and build a new motorcycle in a mere eighteen months. The flavor of the day could easily be accomplished with this organizational skill and dexterity. On top of this they had lower prices. The Gang of 13 took over a failing company or did they? By 1982, Harley-Davidson sales went into a tailspin with plunging production. The USA was in a deep recession. Adding to the perfect storm was the flood of Asian imports that many believe were being sold in the U.S. below their manufactured costs. Whether this was true or not, how did a small country a half-world away manufacture a quality product that was faster, handled better, and was less expensive? Furthermore, these import motorcycles were more functional. Well, of course they did because USA motorcycle manufacturing offered old clunker styling that was slower, did not handle well, and broke down all the time! And for all of this, Harley-Davidson's cost more. Insulting if one thinks about it. It is not that the Evolution was that good relative to their competitors because in my opinion it was not. However, the Evolution was stellar relative to what went before. I was a loyal Shovelhead rider, necessarily becoming a mechanic along the way. I like the rest of my ilk would never consider riding any other product. I did not care that a Honda might be functionally better, less expensive, and not require my newfound mechanical skills. Honda simply did not give what my psyche craved. Importantly, H-D dropped its lackadaisical attitude towards copyright infringement, particularly with knock-off products. Harley-Davidson became extremely aggressive against the counterfeiting of their trademarks. It licensed use of its logos with all manner merchandise that was embraced by mainstream America followed by the world including the Japanese. H-D then saw the birth of HOG, the most successful marketing and loyalty campaign in the annals of corporate

sustenance. The world embraced this pasteurized version of the outlaw subculture. You might meet the nicest people on a Honda but Harley riders are all about cool. They adapt a pseudo-outlaw lifestyle that emulates freedom and individualism. They spend much of their time adopting one charity or another to prove they really aren't bad. Many charities benefitted greatly during the Harley boom. Can these riders be contesting the Honda mantra of niceness? The previous owners AMF deserve much credit for the success of Harley-Davidson. They gave the Gang of 13 a platform from, which to launch. These new guys were brighter than bright. They put a management team together that knew no bounds in success. I am sure that Marketing 101 in every business school teaches and will continue to teach their brilliant story. Harley-Davidson became the epitome of American manufacturing and marketing, the darling of capitalism at its finest. Think about it! How could a rusty old manufacturer whose time had drifted by reach such pinnacles of success? Well, H-D had a little help along the way with two main sociological factors: 1. The post World War II baby boom, the aging bulge in American demographics looking for adventure and whatever (safely) came their way. 2. A generation that worked hard; raised families and then looked back at what they had missed in their youth. Harley-Davidson embodied the freedom and adventure they lacked. Harley-Davidson was granted two decades, in which to plan a lasting and viable future. It sought to be the motorcycle of mainstream America. The world would follow. This venerable company almost pulled it off. The Motor Company updated technology both in their manufacturing venue and in the product itself. H-D balanced on a near-impossible fulcrum, maintaining tradition on one side and complying with environmental dictates on the other. The Evolution's successor, the air-cooled Twin Cam introduced in 1999 with great success. H-D continued to grow and prosper. I have always viewed the Twin Cam as a transitional model embracing the past but leading into a future of overhead cams and water jackets. The new H-D V-Rod's technological marvels are a wonderful attempt but as much as the Factory hoped, mainstream Harley riders did not take the bait en masse. After all they had their psychological needs. These attempts did not prevent dark clouds from appearing on the horizon: 1. Inexorably, the post World War II baby boom's bulge has grown older, losing interest in reclaiming youth with interests shifting elsewhere. Who is to take over this downsizing market? Who will be left to support the Motor Company in the style it has become accustomed? 2. In my humble opinion, the masters of marketing did not fill the coming void of consumers. I think H-D is good at pretty much everything except lowering prices for the incoming generations. Nor have they developed affordable and desirable product lines for the youth. Certainly, the Factory began to enjoy economies of scale in manufacturing. I for one do not think they have used their profits wisely for continued prosperity. Will I continue to ride a Harley at age 62? Sure I will but I was riding them before they became cool. I am not a dentist looking for a safe walk on the wild side or a movie star acquiring the in-bauble of the day. The Evolution motorcycle saved the Hog's bacon but a new savior is now required.

**amazing tanks 2: *Freedom's Forge*** Arthur Herman, 2013-07-02 NEW YORK TIMES BESTSELLER • SELECTED BY THE ECONOMIST AS ONE OF THE BEST BOOKS OF THE YEAR “A rambunctious book that is itself alive with the animal spirits of the marketplace.”—The Wall Street Journal *Freedom's Forge* reveals how two extraordinary American businessmen—General Motors automobile magnate William “Big Bill” Knudsen and shipbuilder Henry J. Kaiser—helped corral, cajole, and inspire business leaders across the country to mobilize the “arsenal of democracy” that

propelled the Allies to victory in World War II. Drafting top talent from companies like Chrysler, Republic Steel, Boeing, Lockheed, GE, and Frigidaire, Knudsen and Kaiser turned auto plants into aircraft factories and civilian assembly lines into fountains of munitions. In four short years they transformed America's army from a hollow shell into a truly global force, laying the foundations for the country's rise as an economic as well as military superpower. Freedom's Forge vividly re-creates American industry's finest hour, when the nation's business elites put aside their pursuit of profits and set about saving the world. Praise for Freedom's Forge "A rarely told industrial saga, rich with particulars of the growing pains and eventual triumphs of American industry . . . Arthur Herman has set out to right an injustice: the loss, down history's memory hole, of the epic achievements of American business in helping the United States and its allies win World War II."—The New York Times Book Review "Magnificent . . . It's not often that a historian comes up with a fresh approach to an absolutely critical element of the Allied victory in World War II, but Pulitzer finalist Herman . . . has done just that."—Kirkus Reviews (starred review) "A compulsively readable tribute to 'the miracle of mass production.'"—Publishers Weekly "The production statistics cited by Mr. Herman . . . astound."—The Economist "[A] fantastic book."—Forbes "Freedom's Forge is the story of how the ingenuity and energy of the American private sector was turned loose to equip the finest military force on the face of the earth. In an era of gathering threats and shrinking defense budgets, it is a timely lesson told by one of the great historians of our time."—Donald Rumsfeld

**amazing tanks 2: Those WERE the Days** Barrie C. Woods, 2017-11-22 A fascinating tale of a young school boy's exploits in his quest to spot every steam locomotive in the UK during the 1950s & 1960s, until steam finished on British Railways on 4th August 1968. at the time I lived in North Hertfordshire, so my trainspotting days began mainly at Hitchin on the ECML. I later moved to Guildford and carried on from there. I was fortunate in that I recorded virtually all my activities and furthermore have retained those records to this day. In those days before computers and mobile phones Trainspotting was one of the most popular hobbies in the country. My travels covered virtually the whole of the UK over a 10 year period. During that time along with my friends we had lots of interesting and sometimes amusing incidents; such as the Castleford 'Snow' occurrence;

contretemps with a herd of Bullocks; run-ins with the law and shed foremen; sleeping rough on many occasions; a scary walk over Crumlin viaduct; our coach catching fire on the M1; plus many more. we visited locomotive sheds over 600 times during which I recorded in excess of 21,000 engines! We travelled by any means available; coach; bus; mini-bus; bicycle; car; motorbike; train; ferry; and a lot of hitchhiking! The latter including one such ride on a 9F which took me right into the shed I was about to bunk! We would take every opportunity to be by our beloved steam engines, daily on the way to & from school, then again in the evenings and every 2-3 weeks off on a tour somewhere in the UK some of these lasted 4 -5 days, often with rather dubious overnight accommodation! these tours were to all parts of the UK, from South Wales to Aberdeen, the Northwest, Northeast, Midlands, North Wales, south to Brighton, Southampton, Isle of Wight, West country and dozens of other locations The book has full colour card covers, is A4 portrait style of 185 pages and over 100 B & W photos. At the end of the text are two appendices, the first lists every shed visited and the relevant dates, the second lists in chronological order every locomotive seen, its shed and date.
