del valle training center: Overlook Matthew Coolidge, Sarah Simons, 2006 A town at the bottom of a reservoir. A covert military installation. A downsized Olestra plant. Sites like these rarely appear on street maps. But they are windows into the American psyche, landmarks that manifest the rich ambiguities of the nation's cultural history. The Center for Land Use Interpretation draws us into such places, serving as a kind of curator of the American landscape, and a tour guide, helping people understand this vast and complex country. Here, drawing on more than a decade of work, the Center for Land Use Interpretation reflects on how the nation's lands have been parceled out, put to use, and understood. Seeking out the unusual and the exemplary, it takes us through ghost towns and show caves, past soap and shoelace factories, to open pit mines, casinos, landfills and art installations. We see the dry lakes where atomic bombs were tested and the ersatz villages where rescue workers train for toxic spills and other disasters. The Statue of Liberty and Mount Rushmore may loom large in the American imagination and draw the crowds. But the unsung places like those chronicled in *Overlook* have at least as much to say about American society, if not more. This, after all, is the America where we live.--BOOK JACKET.

del valle training center: *Austin, Cleared for Takeoff* Kenneth B. Ragsdale, 2010-01-01 Austin, Texas, entered the aviation age on October 29, 1911, when Calbraith Perry Rodgers landed his Wright EX Flyer in a vacant field near the present-day intersection of Duval and 45th Streets. Some 3,000 excited people rushed out to see the pilot and his plane, much like the hundreds of thousands who mobbed Charles A. Lindbergh and The Spirit of St. Louis in Paris sixteen years later. Though no one that day in Austin could foresee all the changes that would result from manned flight, people here—as in cities and towns across the United States—realized that a new era was opening, and they greeted it with all-out enthusiasm. This popularly written history tells the story of aviation in Austin from 1911 to the opening of Austin-Bergstrom International Airport in 1999. Kenneth Ragsdale covers all the significant developments, beginning with military aviation activities during World War I and continuing through the barnstorming era of the 1920s, the inauguration of airmail service in 1928 and airline service in 1929, and the dedication of the first municipal airport in 1930. He also looks at the University of Texas's role in training pilots during World War II, the growth of commercial and military aviation in the postwar period, and the struggle over airport expansion that occupied the last decades of the twentieth century. Throughout, he shows how aviation and the city grew together and supported each other, which makes the Austin aviation experience a case study of the impact of aviation on urban communities nationwide.

del valle training center: Museum Frictions Ivan Karp, Corinne A. Kratz, Lynn Szwaja, Tomas Ybarra-Frausto, 2006-12-07 Museum Frictions is the third volume in a bestselling series on culture, society, and museums. The first two volumes in the series, Exhibiting Cultures and Museums and Communities, have become defining books for those interested in the politics of museum display and heritage sites. Another classic in the making, Museum Frictions is a lavishly illustrated examination of the significant and varied effects of the increasingly globalized world on contemporary museum, heritage, and exhibition practice. The contributors—scholars, artists, and curators—present case studies drawn from Africa, Australia, North and South America, Europe, and Asia. Together they offer a multifaceted analysis of the complex roles that national and community museums, museums of art and history, monuments, heritage sites, and theme parks play in creating public cultures. Whether contrasting the transformation of Africa's oldest museum, the South Africa Museum, with one of its newest, the Lwandle Migrant Labor Museum; offering an interpretation of the audio guide at the Guggenheim Bilbao; reflecting on the relative paucity of art museums in Peru and Cambodia; considering representations of slavery in the United States and Ghana; or meditating on the ramifications of an exhibition of Australian aboriginal art at the Asia Society in New York City, the contributors highlight the frictions, contradictions, and collaborations emerging in museums and heritage sites around the world. The volume opens with an extensive introductory essay by Ivan Karp and Corinne A. Kratz, leading scholars in museum and heritage studies. Contributors.
