core mandatory part 1: *OECD Arbitration in Tax Treaty Law* Alicja Majdanska, Laura Turcan, 2018-09-14 Arbitration: the solution to tackle cross-border tax disputes From the increasing integration of the world economy and the lack of rules to govern the taxation of multinational enterprises to cross-border tax disputes: arbitration is one potential solution. Arbitration is not a new development in the international tax arena, but it has not yet been widely implemented in practice. In the last few years, the concept of arbitration in tax matters was revived, mainly following the OECD/G20 BEPS Project, as well as the EU Action Plan on Corporate Taxation. Now arbitration is expected to play a more significant role and enhance the existing framework of cross-border tax dispute resolution. „OECD Arbitration in Tax Treaty Law” constitutes a comprehensive compendium on international tax arbitration and provides in-depth analysis of all relevant aspects of the topic. The introductory chapters provide background information on tax arbitration and comparisons with other areas of law. The book also takes stock of the recent developments in this area within the OECD, the EU, the UN and the United States. It addresses the main concerns that have been raised with regard to arbitration, and compares and contrasts the design of various arbitration clauses. It also considers potential future developments. This compendium on international tax arbitration shows one way how to tackle the rising tide of cross-border tax disputes.

The aim of ESORICS is to further the progress of research in computer security by establishing a European forum for bringing together - searchers in this area, by promoting the exchange of ideas with system developers and by encouraging links with researchers in related areas. ESORICS is coordinated by an independent steering committee. In the past it took place every two years at various locations throughout Europe. Starting this year, it will take place annually. ESORICS 2003 was organized by Gjøvik University College, and took place in Gjøvik, Norway, October 13-15, 2003. The program committee received 114 submissions, originating from 26 countries on all continents. Half the papers originated in Europe (57). The most

dominant countries were: UK (16), USA (14), Germany (6), South Korea (6), Sweden (6), Italy (5), France (4) and Poland (4). Each submission was reviewed by at least three program committee members or other experts. The program committee chair and co-chair were not allowed to submit papers. The final selection of papers was made at a program committee meeting followed by a week of e-mail discussions. Out of the 114 papers received, only 19 got accepted (17%). In comparison, ESORICS 2000 and 2002 received 75 and 83 papers and accepted 19% and 16%, respectively. core mandatory part 1: Boolean Circuit Rewiring Tak-Kei Lam, Wai-Chung Tang, Xing Wei, Yi Diao, David Yu-Liang Wu, 2016-01-06 Demonstrates techniques which will allow rewiring rates of over 95%, enabling adoption of deep sub-micron chips for industrial applications. Logic synthesis is an essential part of the modern digital IC design process in semi-conductor industry. This book discusses a logic synthesis technique called "rewiring" and its latest technical advancement in terms of rewirability. Rewiring technique has surfaced in academic research since 1993 and there is currently no book available on the market which systematically and comprehensively discusses this rewiring technology. The authors cover logic transformation techniques with concentration on rewiring. For many decades, the effect of wiring on logic structures has been ignored due to an ideal view of wires and their negligible role in the circuit performance. However in today's semiconductor technology wiring is the major player in circuit performance degeneration and logic synthesis engines can be improved to deal with this through wire-based transformations. This book introduces the automatic test pattern generation (ATPG)-based rewiring techniques, which are recently active in the realm of logic synthesis/verification of VLSI/SOC designs. Unique comprehensive coverage of semiconductor rewiring techniques written by leading researchers in the field. Provides complete coverage of rewiring from an introductory to intermediate level. Rewiring is explained as a flexible technique for Boolean logic synthesis, introducing the concept of Boolean circuit transformation and testing, with examples. Readers can directly apply the described techniques to real-world VLSI design issues. Focuses on the automatic test pattern generation (ATPG) based rewiring methods although some non-ATPG based rewiring methods such as graph based alternative wiring (GBAW), and "set of pairs of functions to be distinguished" (SPFD) based rewiring are also discussed. A valuable resource for researchers and postgraduate students in VLSI and SoC design, as well as digital design engineers, EDA software developers, and design automation experts that specialize in the synthesis and optimization of logical circuits.

core mandatory part 1: Licensing Standard Essential Patents Igor Nikolic, 2021-11-18

What is the licensing framework of standard essential patents (SEPs) for connectivity standards such as 5G and Wi-Fi? How will the framework change with the Internet of Things (IoT)? This book provides comprehensive answers to these questions. For over two decades, connectivity standards have been the subject of litigation and controversy around the globe. Now, with the introduction of 5G and the emergence of the world of connected objects, or the IoT, the licensing framework for SEPs is becoming even more contentious. In order to bring clarity to the debate, this book analyses and explains key components of a fair, reasonable and non-discriminatory (FRAND) licence for SEPs; clarifies the economic, policy and market background of SEP disputes; examines the interrelated application of contract, patent and competition laws; and describes the approaches by courts and regulators in the EU, US and the UK. Importantly, the book also assesses how the experience from the smartphone and ICT industries can be applied in a new environment of the IoT, and considers what needs to be changed in the future SEP licensing landscape. The book provides a holistic coverage of SEP licensing issues in an attempt to reduce uncertainty within this highly complex and technical area, and will be useful to practitioners, policy makers, SMEs and large technology companies in the IoT, as well as academics interested in the field.

core mandatory part 1: Modern Mathematics Education for Engineering Curricula in Europe

Seppo Pohjolainen, Tuomas Myllykoski, Christian Mercat, Sergey Sosnovsky, 2018-07-16 This open access book provides a comprehensive overview of the core subjects comprising mathematical curricula for engineering studies in five European countries and identifies differences between two strong traditions of teaching mathematics to engineers. The collective work of experts from a dozen universities critically examines various aspects of higher mathematical education. The two EU Tempus-IV projects – MetaMath and MathGeAr – investigate the current methodologies of mathematics education for technical and engineering disciplines. The projects aim to improve the existing mathematics curricula in Russian, Georgian and Armenian universities by introducing modern technology-enhanced learning (TEL) methods and tools, as well as by shifting the focus of engineering mathematics education from a purely theoretical tradition to a more applied paradigm. MetaMath and MathGeAr have brought together mathematics educators, TEL specialists and experts in education quality assurance from 21 organizations across six countries. The results of a comprehensive comparative analysis of the entire spectrum of mathematics courses in the EU, Russia, Georgia and Armenia has been conducted, have allowed the consortium to pinpoint and introduce several modifications to their curricula while preserving the generally strong state of university mathematics education in these countries. The book presents the methodology, procedure and results of this analysis. This book is a valuable resource for teachers, especially those teaching mathematics, and curriculum planners for engineers, as well as for a general audience interested in scientific and technical higher education.

core mandatory part 1: A Framework for Quality of Service in Vehicle-to-Pedestrian Safety Communication Parag Sewalkar, 2021-01-01 Pedestrians and bicyclists, also known as Vulnerable Road Users (VRUs), are one of the weakest components of Intelligent Transportation Systems from a safety perspective. However, with the advent of new communication technologies, VRU protection may no longer be dependent solely on the vehicle's safety systems. VRUs may share their location information with the surrounding vehicles to increase awareness of their presence. Such communication among vehicles and VRUs is referred to as Vehicle-to-Pedestrian (V2P) communication. Although the V2P system may be built upon the existing Vehicle-to-Vehicle communication system, it has its own set of challenges, such as different VRU mobility characteristics, energy-constrained devices, and VRU density. Therefore, there needs to be a V2P system model which is adapted to the VRU characteristics. This dissertation tackles this challenge by proposing a framework that enables scalability, reliability, and energy efficiency for VRU communication.

Singaporean students routinely outperform their peers from around the world, placing first or second in international assessments, particularly in math and science. In 2015, Singaporean students topped the league table for both the Programme in International Student Achievement (PISA) and the Trends in International Mathematics and Science Study (TIMSS). With educators around the world clamoring for the Singapore secret, the reality is that Singapore's excellence is the result of a 25-year drive to improve education through systemic, long-term and ongoing, consistent, and deliberative reform with an emphasis on teacher quality. This book describes the interwoven strategies that merge context, quality, governance, and continual evolution into a consistently high-achieving student population.

core mandatory part 1: *Introduction to the Law of the United States* David Clark, Tu?rul Ansay, 2002-01-01 Introduction to the Laws.....Series Volume 5 As issues in American law turn up with ever-greater frequency in dozens of countries worldwide, some familiarity with the legal system of the United States of America has become de rigueur for practising lawyers everywhere. This incomparable handbook, now in its Second Edition, provides an authoritative description of the major elements, including all matters likely to emerge in the course of normal legal activity. Written from a clear and cogent comparative perspective, it is of great practical value for both counselling and courtroom use. Eighteen lucid chapters by distinguished American law professors, each of whom is also knowledgeable about a legal system outside that of the United States, explain the major laws, legal standards, and legal institutions of the United States. Substantive and procedural comparisons are presented in plain English, with appropriate commentary where deemed helpful to clarify particularly complex or unsettled matters. The resulting volume is an expert historical, systematic, and critical introduction to the law of the United States.
