craigslis in el pasc tx: Threatcasting Brian David Johnson, Cyndi Coon, Natalie Vanatta, 2022-06-01 Impending technological advances will widen an adversary's attack plane over the next decade. Visualizing what the future will hold, and what new threat vectors could emerge, is a task that traditional planning mechanisms struggle to accomplish given the wide range of potential issues. Understanding and preparing for the future operating environment is the basis of an analytical method known as Threatcasting. It is a method that gives researchers a structured way to envision and plan for risks ten years in the future. Threatcasting uses input from social science, technical research, cultural history, economics, trends, expert interviews, and even a little science fiction to recognize future threats and design potential futures. During this human-centric process, participants brainstorm what actions can be taken to identify, track, disrupt, mitigate, and recover from the possible threats. Specifically, groups explore how to transform the future they desire into reality while avoiding an undesired future. The Threatcasting method also exposes what events could happen that indicate the progression toward an increasingly possible threat landscape. This book begins with an overview of the Threatcasting method with examples and case studies to enhance the academic foundation. Along with end-of-chapter exercises to enhance the reader's understanding of the concepts, there is also a full project where the reader can conduct a mock Threatcasting on the topic of "the next biological public health crisis." The second half of the book is designed as a practitioner's handbook. It has three separate chapters (based on the general size of the Threatcasting group) that walk the reader through how to apply the knowledge from Part I to conduct an actual Threatcasting activity. This book will be useful for a wide audience (from student to practitioner) and will hopefully promote new dialogues across communities and novel developments in the area.

craigslis in el pasc tx: Somatic Descent Reginald A. Ray, 2020-08-25 A powerful meditation practice for connecting with your body's innate, guiding wisdom. Have you ever had a gut feeling about a certain person or situation? Or a sense of intuition about how to respond to a particular challenge in your life? There's nothing magical or mystical about those kinds of scenarios. In fact, our body contains immense wisdom not directly available to our conscious mind, and it is continually communicating to us in the form of bodily feelings, impressions, sensations, corporeal intuitions, and felt senses. However, because most of us are so cut off from our somatic experience, we are quite unaware of this dimension of our body's expression. Although this intelligence may feel hidden most of the time, the wisdom of the body can actually be a guide for us in living our lives fully and also in responding compassionately to others. Through a meditation practice called Somatic Descent, Reggie Ray shows us how to connect with our body's intuitive intelligence. In Somatic Descent we see that the body is always showing us what sort of response, direction, or action may be called for at any given time, and can in fact be relied upon as a primary practical resource for decision-making in our everyday life. The book will include links to online audio recordings of the guided meditations to further aid the reader.

Paul, Mark Dredze, 2017-08-31 Public health thrives on high-quality evidence, yet acquiring meaningful data on a population remains a central challenge of public health research and practice. Social monitoring, the analysis of social media and other user-generated web data, has brought advances in the way we leverage population data to understand health. Social media offers advantages over traditional data sources, including real-time data availability, ease of access, and reduced cost. Social media allows us to ask, and answer, questions we never thought possible. This book presents an overview of the progress on uses of social monitoring to study public health over the past decade. We explain available data sources, common methods, and survey research on social monitoring in a wide range of public health areas. Our examples come from topics such as disease surveillance, behavioral medicine, and mental health, among others. We explore the limitations and concerns of these methods. Our survey of this exciting new field of data-driven research lays out future research directions.

In their island community, friends Liesl Clark and Rebecca Rockefeller discovered that the beaches of Puget Sound were spoiled by a daily influx of plastic items and trash washing on shore. From pens and toothbrushes to toys and straws, they wondered, where did it all come from? Of course, it comes from us—our homes, our backyards, our cars, and our workplaces. And so, a rallying cry against excess stuff was born. In 2013, they launched the first Facebook Buy Nothing Project group in their small town off the coast of Seattle, and they never expected it to become a viral sensation. Today there are thousands of Buy Nothing groups all over the world, boasting more than a million members, and 5,000 highly active volunteers. Inspired by the ancient practice of gift economies, where neighbors share and pool resources, *The Buy Nothing, Get Everything Plan* introduces an environmentally conscious 7-step guide that teaches us how to buy less, give more, and live generously. At once an actionable plan and a thought-provoking exploration of our addiction to stuff, this powerful program will help you declutter your home without filling landfills, shop more thoughtfully and discerningly, and let go of the need to buy new things. Filled with helpful lists and practical suggestions including 50 items you never need to buy (Ziploc bags and paper towels) and 50 things to make instead (gift cards and salad dressing), *The Buy Nothing, Get Everything Plan*

encourages you to rethink why you shop and embrace a space-saving, money-saving, and earth-saving mindset of buying less and sharing more.

Americans striving to build their skills to get jobs in a rapidly changing economy, the workforce development field has seen a significant increase in sector strategies, which focus on the specific skills that employers need and address the real-world challenges facing low-income workers. Maureen Conway and Robert P. Giloth deliver a robust volume featuring perspectives from prominent nonprofit and philanthropy leaders, academics and researchers to capture how sector-based workforce development, in industries ranging from health to construction, has evolved over 30 years - and how it can continue to grow and inform future investments and policy decisions. The book offers lessons for policymakers, philanthropic investors, researchers and local leaders interested in policies and practices that support strong businesses while helping struggling Americans connect to good jobs. *Connecting People to Work* features case studies of organizations implementing sector-based workforce development strategies in the health care, construction, manufacturing and restaurant industries, and highlights how policy and economic changes and new practices among education and training institutions are affecting workforce development efforts. It also includes evaluation results and a review of major sector-financing strategies. The book discusses the need for these workforce strategies at a time when many people are out of work or underemployed and face a labor market that is difficult to navigate. Too many workers today earn too little to make ends meet, and they often lack the time or resources to participate in local education programs that may or may not help them find work. Many low-wage workers often need additional support as they go through training, an approach generally adopted by sector strategies. The results chronicled in the book make clear that such strategies can help create viable opportunities for more Americans to gain the skills they need to achieve greater financial stability.

craigslist in el paso tx: *United States Code* United States, 2013 The United States Code is the official codification of the general and permanent laws of the United States of America. The Code was first published in 1926, and a new edition of the code has been published every six years since 1934. The 2012 edition of the Code incorporates laws enacted through the One Hundred Twelfth Congress, Second Session, the last of which was signed by the President on January 15, 2013. It does not include laws of the One Hundred Thirteenth Congress, First Session, enacted between January 2, 2013, the date it convened, and January 15, 2013. By statutory authority this edition may be cited U.S.C. 2012 ed. As adopted in 1926, the Code established prima facie the general and permanent laws of the United States. The underlying statutes reprinted in the Code remained in effect and controlled over the Code in case of any discrepancy. In 1947, Congress began enacting individual titles of the Code into positive law. When a title is enacted into positive law, the underlying statutes are repealed and the title then becomes legal evidence of the law. Currently, 26 of the 51 titles in the Code have been so enacted. These are identified in the table of titles near the beginning of each volume. The Law Revision Counsel of the House of Representatives continues to prepare legislation pursuant to 2 U.S.C. 285b to enact the remainder of the Code, on a title-by-title basis, into positive law. The 2012 edition of the Code was prepared and published under the supervision of Ralph V. Seep, Law Revision Counsel. Grateful acknowledgment is made of the contributions by all who helped in this work, particularly the staffs of the Office of the Law Revision Counsel and the Government Printing Office--Preface.
