cool math games double cheeseburger medium fries: *Modeling Life* Alan Garfinkel, Jane Shevtsov, Yina Guo, 2017-09-06 This book develops the mathematical tools essential for students in the life sciences to describe interacting systems and predict their behavior. From predator-prey populations in an ecosystem, to hormone regulation within the body, the natural world abounds in dynamical systems that affect us profoundly. Complex feedback relations and counter-intuitive responses are common in nature; this book develops the quantitative skills needed to explore these interactions. Differential equations are the natural mathematical tool for quantifying change, and are the driving force throughout this book. The use of Euler's method makes nonlinear examples

tractable and accessible to a broad spectrum of early-stage undergraduates, thus providing a practical alternative to the procedural approach of a traditional Calculus curriculum. Tools are developed within numerous, relevant examples, with an emphasis on the construction, evaluation, and interpretation of mathematical models throughout. Encountering these concepts in context, students learn not only quantitative techniques, but how to bridge between biological and mathematical ways of thinking. Examples range broadly, exploring the dynamics of neurons and the immune system, through to population dynamics and the Google PageRank algorithm. Each scenario relies only on an interest in the natural world; no biological expertise is assumed of student or instructor. Building on a single prerequisite of Precalculus, the book suits a two-quarter sequence for first or second year undergraduates, and meets the mathematical requirements of medical school entry. The later material provides opportunities for more advanced students in both mathematics and life sciences to revisit theoretical knowledge in a rich, real-world framework. In all cases, the focus is clear: how does the math help us understand the science?

cool math games double cheeseburger medium fries: Salt, Sugar, Fat Michael Moss, 2013-02-28 The No.1 New York Times Bestseller In China, for the first time, the people who weigh too much now outnumber those who weigh too little. In Mexico, the obesity rate has tripled in the past three decades. In the UK over 60 per cent of adults and 30 per cent of children are overweight, while the United States remains the most obese country in the world. We are hooked on salt, sugar and fat. These three simple ingredients are used by the major food companies to achieve the greatest allure for the lowest possible cost. Here, Pulitzer Prize-winning investigative reporter Michael Moss exposes the practices of some of the most recognisable (and profitable) companies and brands of the last half century. He takes us inside the labs where food scientists use cutting-edge technology to calculate the 'bliss point' of sugary drinks. He unearths marketing campaigns designed - in a technique adapted from the tobacco industry - to redirect concerns about the health risks of their products, and reveals how the makers of processed foods have chosen, time and again, to increase consumption and profits, while gambling with our health. Are you ready for the truth about what's in your shopping basket?

cool math games double cheeseburger medium fries: Upper Cut Carrie White, 2015-12-15 Shampoo meets You'll Never Eat Lunch In This Town Again in a rollicking and riveting memoir from the woman who for decades styled Hollywood's most celebrated players. I was living a hairdresser's dream. I was making my mark in this all-male field. My appointment book was filled with more and more celebrities. And I was becoming competition for my heroes... Behind the scenes of every Hollywood photo shoot, TV appearance, and party in the '60s, '70s, and '80s, there was Carrie White. As the "First Lady of Hairdressing," Carrie collaborated with Richard Avedon on shoots for Vogue, partied with Jim Morrison, gave Sharon Tate her California signature style, and got high with Jimi Hendrix. She has counted Jennifer Jones, Betsy Bloomingdale, Elizabeth Taylor, Goldie Hawn, and Camille Cosby among her favorite clients. But behind the glamorous facade, Carrie's world was in perpetual disarray and always had been. After her father abandoned the family when she was still a child, she was sexually abused by her domineering stepfather, and her alcoholic mother was unstable and unreliable. Carrie was sipping cocktails before her tenth birthday, and had had five children and three husbands before her twenty-eighth. She fueled the frenetic pace of her professional life with a steady diet of champagne and vodka, diet pills, cocaine, and heroin, until she eventually lost her home, her car, her career—and nearly her children. But she battled her way back, getting sober, rebuilding her relationships and her reputation as a hairdresser, and the name Carrie White was back on the door of one of Beverly Hills's most respected salons. An unflinching portrayal of addiction and recovery, Upper Cut proves that even in Hollywood, sometimes you have to fight for a happy ending.

cool math games double cheeseburger medium fries: *Dark Lightning* John Varley, 2014 Known for “superior science fiction” (The Philadelphia Inquirer), author John Varley returns to his Thunder and Lightning series with a novel of how one man’s volatile genius could alter a starship’s epic plunge into a future where human survival is just a theory... On a voyage to New Earth, the starship Rolling Thunder is powered by an energy no one understands, except for its eccentric inventor Jubal Broussard. Like many of the ship’s inhabitants, Jubal rests in a state of suspended animation for years at a time, asleep yet never aging. The moments when Jubal emerges from suspended animation are usually a cause for celebration for his family, including his twin daughters—Cassie and Polly—and their uncle who is captain of the Rolling Thunder. But this time, Jubal makes a shocking announcement... The ship must stop, or everyone will die. These words from the mission’s founder, the man responsible for the very existence of the Rolling Thunder, will send shock waves throughout the starship—and divide its passengers into those who believe and those who doubt. And it will be up to Cassie and Polly to stop a mutiny, discover the truth, and usher the ship into a new age of exploration...

They enslaved humanity not by force, but through an aggressive mind control that turned people into contented, unquestioning robots. Except sixteen-year-old Althea isn’t content at all, and she doesn’t need the mysterious note inside her locket to tell her she’s Something Else. It also warns her to trust no one, so she hides the pieces that make her different, even though it means being alone. The autumn she meets Lucas, everything changes. Althea and Lucas are immune to the alien mind control, and together they search for the reason why. What they uncover is a stunning truth the Others never anticipated, one with the potential to free the brainwashed human race. It’s not who they are that makes them special, but what. And what they are is a threat. One the Others are determined to eliminate for good.

cool math games double cheeseburger medium fries: *Entrepreneurial Small Business* Jerry Katz, 2008-01-01 Entrepreneurial Small Business (ESB) provides students with a clear vision of small business as it really is today: Katz focuses on the distinctive nature of small businesses that students might actually start versus high growth firms. The goal of the companies described in this textbook is personal independence with financial security; not market dominance with extreme wealth. Traditional beliefs and models in small business are discussed, as well as the latest findings and best practices from academic and consulting arenas. Katz and Green recognize the distinction between entrepreneurs who aim to start the successor to Amazon.com or the pizza place around the corner. They discuss the challenges facing entrepreneurs, while keeping focused on the small businesses students plan to start.

cool math games double cheeseburger medium fries: *A Champion's Mind* Pete Sampras, Peter Bodo, 2008-06-10 Pete Sampras is arguably the greatest tennis player ever, a man whose hard-nosed work ethic led to an unprecedented number one world ranking for 286 weeks, and whose prodigious talent made possible a record-setting fourteen Grand Slam titles. While his more vocal rivals sometimes grabbed the headlines, Pete always preferred to let his racket do the talking. Until now. In *A Champion's Mind*, the tennis great who so often exhibited visible discomfort with letting people “inside his head” finally opens up. An athletic prodigy, Pete resolved from his earliest playing days never to let anything get in the way of his love for the game. But while this single-minded determination led to tennis domination, success didn’t come without a price. The constant pressure of competing on the world’s biggest stage—in the unblinking eye of a media machine hungry for more than mere athletic greatness—took its toll. Here for the first time Pete speaks freely about what it was like to possess what he calls “the Gift.” He writes about the personal trials he faced—including the death of a longtime coach and confidant—and the struggles he gutted his way through while being seemingly on top of the world. Among the book’s most riveting scenes are an early devastating loss to Stefan Edberg that led Pete to make a monastic commitment to delivering

on his natural talent; a grueling, four-hour-plus match against Alex Corretja during which Pete became seriously ill; fierce on-court battles with rival and friend Andre Agassi; and the triumphant last match of Pete's career at the finals of the 2002 U.S. Open. In *A Champion's Mind*, one of the most revered, successful, and intensely private players in the history of tennis offers an intimate look at the life of an elite athlete.

cool math games double cheeseburger medium fries: *The Culinary Bro-Down Cookbook* Josh Scherer, 2017-08-29 The Culinary Bro-Down Cookbook is full of irreverent essays and anecdotes, but running throughout is a deep sense of soul and self that strives to answer the question: Why can't the deep-fried nonsense you eat with your bros at 2 a.m. have the same emotional gravitas as an intimate family dinner? There was never anything wrong with instant ramen. But there was never anything wrong with not being on the moon, either. That didn't stop Neil Armstrong, Buzz Aldrin, and that other guy* from changing the course of human history with a few daring steps and a super dope catchphrase. So too shall journalist and blogger Josh Scherer change the course of late-night, often-insane, sometimes-smart-but-always-monstrous munchie food that puts your MSG packet garbage to shame. You'll find more than seventy creations broken into the ten brossential food groups like: Beer, Fried Things, Tacos, and Struggle Snacks (because money is hard). Josh's recipes range from indulgent eats like Beer-Poached Bratwurst Party Subs and Mac 'n' Cheese Nachos to hella-classy dishes like Broccolini with Burnt Lemon Hollandaise and Pork Belly Tacos with Fish Sauce Caramel. Sprinkled in are the unholy commandments for bro cooking, such as bagged wine is the only wine you need, and Josh's expert advice on how to beat a hangover (it's mostly just pastrami and emotionally purging movies). Oh and there's bacon, too. Like, a lot of it.

cool math games double cheeseburger medium fries: Buyology Martin Lindstrom, 2008-10-21 NEW YORK TIMES BESTSELLER • “A fascinating look at how consumers perceive logos, ads, commercials, brands, and products.”—Time How much do we know about why we buy? What truly influences our decisions in today’s message-cluttered world? In *Buyology*, Martin Lindstrom presents the astonishing findings from his groundbreaking three-year, seven-million-dollar neuromarketing study—a cutting-edge experiment that peered inside the brains of 2,000 volunteers from all around the world as they encountered various ads, logos, commercials, brands, and products. His startling results shatter much of what we have long believed about what captures our interest—and drives us to buy. Among the questions he explores: • Does sex actually sell? • Does subliminal advertising still surround us? • Can “cool” brands trigger our mating instincts? • Can our other senses—smell, touch, and sound—be aroused when we see a product? *Buyology* is a fascinating and shocking journey into the mind of today's consumer that will captivate anyone who's been seduced—or turned off—by marketers' relentless attempts to win our loyalty, our money, and our minds.

cool math games double cheeseburger medium fries: Weighing In Julie Guthman, 2011-10-06 A bold, compelling challenge to conventional thinking about obesity and its fixes, *Weighing In* is one of the most important books on food politics to hit the shelves in a long time. —Susanne Freidberg, author of *Fresh: A Perishable History* *Weighing In* is filled with counterintuitive surprises that should make us skeptics of all kinds of food -- whether local, fast, slow, junk or health -- but also gives us the practical tools to effectively scrutinize the stale buffet of popularly-accepted health wisdom before we digest it. —Paul Robbins, professor of Geography and Development, University of Arizona If you liked Michael Pollan, this should be your next read. Guthman gives us the research behind the questions we should be asking, but, falling all over ourselves in the rush to consensus, we have overlooked. A self-described Berkeley foodie, Guthman takes on the self-satisfaction of the alternative food movement and places it in rich context, drawing on research in health, economics, labor, agriculture, sociology, and politics. This marvelous, surprising book is a true game-changer in our national conversation about food and justice. —Anna Kirkland, author of *Fat Rights: Dilemmas of Difference and Personhood* “This groundbreaking book calls into question the ubiquitous claim that ‘good food’ will solve the social and health dilemmas of today. Combining political economic analysis, cultural critique, and clear explanation of scientific discoveries, the author challenges our deeply held convictions about society, food, bodies, and environments.” —Becky Mansfield, editor of *Privatization: Property and the Remaking of Nature-Society Relations* Step back from that farmer's market -- Guthman shows us that good foods

and good eating are not enough. By questioning the fuzzy facts on obesity, the impact of environment, and capitalism's relentless push to consume, *Weighing In* challenges us to think harder, and better, about what it really takes to be healthy in the modern age. —Carolyn de la Peña, author of *Empty Pleasures: The Story of Artificial Sweetener from Saccharin to Splenda*
