core mandatory part 2: Web Services Anura Guruge, 2004-04-08 This is a soup-to-nuts reference guide on all aspects of Web Services - where Web Services is a fast emerging set of Internet-specific middleware technology to further promote the growth of all aspects of e-business via standardization, collaboration and franchising. This book is best characterized as an executive brief for IT and senior management rather than a nuts-and-bolts technical guide for portal implementers. Think of it as the Cliffs Notes on Web Services. Given this audience, the book consistently focuses on business needs, value propositions, ROI, proven solutions and actual examples of current implementations. Each chapter also ends with a 10-item Q&A section that consolidates and summarizes the information discussed in the chapter. The book is illustrated with detailed technical diagrams, includes lots of arresting subtitles and contains many bullet lists and tables to facilitate (and encourage) productive skimming. Decision makers - the intended readership for this book - gain increasing comfort and confidence as they get into the book that they are getting to see all facets of the issues, on a consistent basis, and that they will not be blind-sided at meetings by people asking 'difficult' questions. At the end of each chapter, Guruge summarizes and reinforces key points, allowing the reader to skim through the topics for crucial information. The book also leverages living outside resources and ensures that the readership always has ready and consistent access to any and all terms, definitions and concepts they might not be familiar with. Debate style presentation, focusing repeatedly on pros-and-cons, e.g., .NET vs. Java, open vs. proprietary and buy vs. build. core mandatory part 2: *Advances in Human Aspects of Transportation: Part II* Neville Stanton, Steven Landry, Giuseppe Di Bucchianico, Andrea Vallicelli , 2021-07-19 Human Factors and Ergonomics have made a considerable contribution to the research, design, development, operation and analysis of transportation systems which includes road and rail vehicles and their complementary infrastructure, aviation and maritime transportation. This book presents recent advances in the Human Factors aspects of Transportation. These advances include accident analysis, automation of vehicles, comfort, distraction of drivers (understanding of distraction and how to avoid it), environmental concerns, in-vehicle systems design, intelligent transport systems, methodological developments, new systems and technology, observational and case studies, safety, situation awareness, skill development and training, warnings and workload. This book brings together the most recent human factors work in the transportation domain, including empirical research, human performance and other types of modeling, analysis, and development. The issues facing engineers, scientists, and other practitioners of human factors in transportation research are becoming more challenging and more critical. The common theme across these sections is that they deal with the intersection of the human and the system. Moreover, many of the chapter topics cross section boundaries, for instance by focusing on function allocation in NextGen or on the safety benefits of a

tower controller tool. This is in keeping with the systemic nature of the problems facing human factors experts in rail and road, aviation and maritime research- it is becoming increasingly important to view problems not as isolated issues that can be extracted from the system environment, but as embedded issues that can only be understood as a part of an overall system.

core mandatory part 2: OECD Arbitration in Tax Treaty Law Alicja Majdanska, Laura Turcan, 2018-09-14 Arbitration: the solution to tackle cross-border tax disputes From the increasing integration of the world economy and the lack of rules to govern the taxation of multinational enterprises to cross-border tax disputes: arbitration is one potential solution. Arbitration is not a new development in the international tax arena, but it has not yet been widely implemented in practice. In the last few years, the concept of arbitration in tax matters was revived, mainly following the OECD/G20 BEPS Project, as well as the EU Action Plan on Corporate Taxation. Now arbitration is expected to play a more significant role and enhance the existing framework of cross-border tax dispute resolution. „OECD Arbitration in Tax Treaty Law” constitutes a comprehensive compendium on international tax arbitration and provides in-depth analysis of all relevant aspects of the topic. The introductory chapters provide background information on tax arbitration and comparisons with other areas of law. The book also takes stock of the recent developments in this area within the OECD, the EU, the UN and the United States. It addresses the main concerns that have been raised with regard to arbitration, and compares and contrasts the design of various arbitration clauses. It also considers potential future developments. This compendium on international tax arbitration shows one way how to tackle the rising tide of cross-border tax disputes.

core mandatory part 2: Health Professions Education Institute of Medicine, Board on Health Care Services, Committee on the Health Professions Education Summit, 2003-07-01 The Institute of Medicine study *Crossing the Quality Chasm* (2001) recommended that an interdisciplinary summit be held to further reform of health professions education in order to enhance quality and patient safety. *Health Professions Education: A Bridge to Quality* is the follow up to that summit, held in June 2002, where 150 participants across disciplines and occupations developed ideas about how to integrate a core set of competencies into health professions education. These core competencies include patient-centered care, interdisciplinary teams, evidence-based practice, quality improvement, and informatics. This book recommends a mix of approaches to health education improvement, including those related to oversight processes, the training environment, research, public reporting, and leadership. Educators, administrators, and health professionals can use this book to help achieve an approach to education that better prepares clinicians to meet both the needs of patients and the requirements of a changing health care system.

Auer, Dan Centea, 2021-02-05 This book contains papers in the fields of Interactive, Collaborative, and Blended Learning; Technology-Supported Learning; Education 4.0; Pedagogical and Psychological Issues. With growing calls for affordable and quality education worldwide, we are currently witnessing a significant transformation in the development of post-secondary education and pedagogical practices. Higher education is undergoing innovative transformations to respond to our urgent needs. The change is hastened by the global pandemic that is currently underway. The 9th International Conference on Interactive, Collaborative, and Blended Learning: Visions and Concepts for Education 4.0 was conducted in an online format at McMaster University, Canada, from 14th to 15th October 2020, to deliberate and share the innovations and strategies. This conference’s main objectives were to discuss guidelines and new concepts for engineering education in higher

education institutions, including emerging technologies in learning; to debate new conference format in worldwide pandemic and post-pandemic conditions; and to discuss new technology-based tools and resources that drive the education in non-traditional ways such as Education 4.0. Since its beginning in 2007, this conference is devoted to new learning approaches with a focus on applications and experiences in the fields of interactive, collaborative, and blended learning and related new technologies. Currently, the ICBL conferences are forums to exchange recent trends, research findings, and disseminate practical experiences in collaborative and blended learning, and engineering pedagogy. The conference bridges the gap between 'pure' scientific research and the everyday work of educators. Schultz, Sydney Ellen Schultz, 2020-07-24 For undergraduate-level courses in Industrial and Organizational Psychology, Business Psychology, Personnel Psychology and Applied Psychology. Psychology and Work Today provides an invaluable foundation for anyone entering today's global business and industrial world. This informative, sophisticated, and entertaining text teaches students about the nature of work in modern society. By focusing on the practical and applied rather than the scientific ideal, the authors demonstrate how industrial-organizational psychology directly impacts our lives as job applicants, trainees, employees, managers, and consumers.

core mandatory part 2: Professional Ethics The City The City Law School, 2022-08-11 Written by experienced practitioners, Professional Ethics equips the reader with a solid understanding of the key ethical and professional conduct issues which underpin all types of practice at the Bar. Including full discussion of the letter and spirit of the Code of Conduct issued by the Bar Standards Board, the manual provides full coverage of the professional conduct principles which govern the working relationships of the barrister with the client, prosecution or defence counsel, the courts and other members of the legal profession. The manual also features a dedicated chapter which identifies the key principles of professional conduct applicable to the core skills of the barrister ensuring that the reader is fully able to uphold the high professional standards of the Bar across all areas of practice. Potentially problematic areas of practice are identified throughout, and practical guidance is given on the correct approach to follow in such situations should they be encountered in practice. The

manual also features a number of exercises designed to encourage the reader to consider how professional conduct principles apply to realistic scenarios. For ease of reference, relevant extracts from the Code of Conduct for barristers and a selection of some of most useful guidance from the Bar Council and the Bar Standards Board is provided at the end of the manual. Professional Ethics is essential reading for all trainee barristers, and is a useful source of reference for practitioners seeking to refresh their knowledge of the rules and principles of professional conduct which govern practice at the Bar. core mandatory part 2: *The Data Science Framework* Juan J. Cuadrado-Gallego, Yuri Demchenko, 2020-10-01 This edited book first consolidates the results of the EU-funded EDISON project (Education for Data Intensive Science to Open New science frontiers), which developed training material and information to assist educators, trainers, employers, and research infrastructure managers in identifying, recruiting and inspiring the data science professionals of the future. It then deepens the presentation of the information and knowledge gained to allow for easier assimilation by the reader. The contributed chapters are presented in sequence, each chapter picking up from the end point of the previous one. After the initial book and project overview, the chapters present the relevant data science competencies and body of knowledge, the model curriculum required to teach the required foundations, profiles of professionals in this domain, and use cases and applications. The text is supported with appendices on related process models. The book can be used to develop new courses in data science, evaluate existing modules and courses, draft job descriptions, and plan and design efficient data-intensive research teams across scientific disciplines.

core mandatory part 2: *Boolean Circuit Rewiring* Tak-Kei Lam, Wai-Chung Tang, Xing Wei, Yi Diao, David Yu-Liang Wu, 2016-03-07 Demonstrates techniques which will allow rewiring rates of over 95%, enabling adoption of deep sub-micron chips for industrial applications Logic synthesis is an essential part of the modern digital IC design process in semi-conductor industry. This book discusses a logic synthesis technique called “rewiring” and its latest technical advancement in term of rewirability. Rewiring technique has surfaced in academic research since 1993 and there is currently no book available on the market which systematically and comprehensively discusses this rewiring technology. The authors cover logic transformation techniques with concentration on rewiring. For many decades, the effect of wiring on logic structures has been ignored due to an ideal view of wires and their negligible role in the circuit performance. However in today’s semiconductor technology wiring is the major player in circuit performance degeneration and logic synthesis engines can be improved to deal with this through wire-based transformations. This book introduces the automatic test pattern generation (ATPG)-based rewiring techniques, which are recently active in the realm of logic synthesis/verification of VLSI/SOC designs. Unique comprehensive coverage of semiconductor rewiring techniques written by leading researchers in the field Provides complete coverage of rewiring from an introductory to intermediate level Rewiring is explained as a flexible technique for Boolean logic synthesis, introducing the concept of Boolean circuit transformation and testing, with examples Readers can directly apply the described techniques to real-world VLSI design issues Focuses on the automatic test pattern generation (ATPG) based rewiring methods although some non-ATPG based rewiring methods such as graph based alternative wiring (GBAW), and “set of pairs of functions to be distinguished” (SPFD) based rewiring are also discussed A valuable resource for researchers and postgraduate students in VLSI and SoC design, as well as digital design engineers, EDA software developers, and design automation experts that specialize in the synthesis and optimization of logical circuits.

core mandatory part 2: Integration of Constraint Programming, Artificial Intelligence, and

Operations Research Andre A. Cire, 2023-05-22 This book constitutes the proceedings of the 20th International Conference on the Integration of Constraint Programming, Artificial Intelligence, and Operations Research, CPAIOR 2022, held in Nice, France, during May 29–June 1, 2023. The 26 full papers and the 6 short papers presented in this book were carefully reviewed and selected from a total of 71 submissions. The content of the papers present new techniques or new applications, and provide an opportunity for researchers in one area to learn about techniques in the others. Besides they give researchers the opportunity to show how the integration of techniques from different fields can lead to interesting results on large and complex problems.
