cool math 66: Burn Albert Bates, Kathleen Draper, 2020-04-14 In order to rescue ourselves from climate catastrophe, we need to radically alter how humans live on Earth. We have to go from spending carbon to banking it. We have to put back the trees, wetlands, and corals. We have to regrow the soil and turn back the desert. We have to save whales, wombats, and wolves. We have to reverse the flow of greenhouse gases and send them in exactly the opposite direction: down, not up. We have to flip the carbon cycle and run it backwards. For such a revolutionary transformation we'll need civilization 2.0. A secret unlocked by the ancients of the Amazon for its ability to transform impoverished tropical soils into terra preta—fertile black earths—points the way. The indigenous custom of converting organic materials into long lasting carbon has enjoyed a reawakening in recent decades as the quest for more sustainable farming methods has grown. Yet the benefits of this carbonized material, now called biochar, extend far beyond the soil. Pyrolyzing carbon has the power to restore a natural balance by unmining the coal and undrilling the oil and gas. Employed to its full potential, it can run the carbon cycle in reverse and remake Earth as a garden planet. Burn looks beyond renewable biomass or carbon capture energy systems to offer a bigger and bolder vision for the next phase of human progress, moving carbon from wasted sources: • into soils and agricultural systems to rebalance the carbon, nitrogen, and related cycles; enhance nutrient density in food; rebuild topsoil; and condition urban and agricultural lands to withstand flooding and drought • to cleanse water by carbon filtration and trophic cascades within the world's rivers, oceans, and wetlands • to shift urban infrastructures such as buildings, roads, bridges, and ports, incorporating drawdown materials and components, replacing steel, concrete, polymers, and composites with biological carbon • to drive economic reorganization by incentivizing carbon drawdown Fully developed, this approach costs nothing—to the contrary, it can save companies money or provide new revenue streams. It contains the seeds of a new, circular economy in which energy, natural resources, and human ingenuity enter a virtuous cycle of improvement. Burn offers bold new solutions to climate change that can begin right now.

cool math 66: Mathematical Music Theory: Algebraic, Geometric, Combinatorial, Topological And Applied Approaches To Understanding Musical Phenomena Mariana Montiel, Robert W Peck, 2018-11-08 Questions about variation, similarity, enumeration, and classification of musical structures have long intrigued both musicians and mathematicians. Mathematical models can be found from theoretical analysis to actual composition or sound production. Increasingly in the last few decades, musical scholarship has incorporated modern mathematical content. One example is the application of methods from Algebraic Combinatorics, or Topology and Graph Theory, to the classification of different musical objects. However, these applications of mathematics in the understanding of music have also led to interesting open problems in mathematics itself. The reach and depth of the contributions on mathematical music theory presented in this volume is significant. Each contribution is in a section within these subjects: (i) Algebraic and Combinatorial Approaches; (ii) Geometric, Topological, and Graph-Theoretical Approaches; and (iii) Distance and Similarity Measures in Music.

cool math 66: The Art of Changing the Brain James E. Zull, 2023-07-03 Neuroscience tells us that the products of the mind--thought, emotions, artistic creation--are the result of the interactions of the biological brain with our senses and the physical world: in short, that thinking and learning are the products of a biological process. This realization, that learning actually alters the brain by changing the number and strength of synapses, offers a powerful foundation for

rethinking teaching practice and one's philosophy of teaching. James Zull invites teachers in higher education or any other setting to accompany him in his exploration of what scientists can tell us about the brain and to discover how this knowledge can influence the practice of teaching. He describes the brain in clear non-technical language and an engaging conversational tone, highlighting its functions and parts and how they interact, and always relating them to the real world of the classroom and his own evolution as a teacher. *The Art of Changing the Brain* is grounded in the practicalities and challenges of creating effective opportunities for deep and lasting learning, and of dealing with students as unique learners.

It is designed to help people look critically at their life, think through their decisions, set priorities and goals, develop a solid character, avoid serious mistakes and discover their true passion in life. It draws on the major ethical frameworks of Aristotle, Mill and Kant as well as the Golden Rule as tools to avoid Benjamin Franklin's warning that people tend to get old too soon and wise too late. It presents a roadmap to accomplish this mission and advocates that each reader start the journey to authentic success now!

cool math 66: See Jesus in Bible Discrepancies Lee Kah Wor, 2024-10-23 There is an apparent discrepancy between Genesis 15:13 and Exodus 12:40 with regards to the period of Israelite slavery in Egypt. One verse says 400 years while the other, 430 years. Many will be quick to use that as solid evidence to discredit God. However, there is so much more to it than meets the eye. For starters, the number 30 is “sheloshim” in Hebrew. It comprises the words “shalosh” and “im”, where “im” is the plural suffix like the English letter “s”. The numerical value of “shalosh” is 636, which is the same when read from right to left or vice versa. It points to how Jesus is the same yesterday, today, and forever. This revelation of Jesus from the number 30 is but the tip of the iceberg. Let this eBook thrill you by revealing the Gospel that is hidden in what seems to be a Biblical inconsistency. In it is also found the end time revelation as recorded in Daniels’ 70 weeks prophecy. Truly, it is God’s glory to conceal a matter and the glory of kings to search it out (Proverbs 25:2). God has designed His Holy Word to contain what seems to be Biblical contradictions so that we will dig deeper into them to see Jesus and find life. Join me on this exhilarating journey of investigative excavation and be floored by the wisdom and love of our wonderful Father God as revealed by Jesus Christ and Him crucified.
