To aid this process as much as possible, this book employs the didactical and methodical concept of integrating teaching and self-study. The criteria for structured learning about IR theory will be derived from an extensive discussion of the questions and problems of philosophy of science (Part 1). Theory of IR refers to the scientific study of IR and covers all of the following subtopics: the role and status of theory in the academic discipline of IR; the understanding of IR as a science and what a scientific theory is; the different assumptions upon which theory building in IR is based; the different types of theoretical constructions and models of explanations found at the heart of particular theories; and the different approaches taken on how theory and the practice of international relations are linked to each other. The criteria for the structured learning process will be applied in Part 2 of the book during the presentation of five selected theories of International Relations. The concept is based on learning through example – that is, the five theories have been chosen because, when applying the criteria developed in Part 1 of the book, each single theory serves as an example for something deeply important to learn about THEORY of IR more generally.

essentials of international relations 9th edition: *Understanding International Relations* Chris Brown, Kirsten Ainley, 2009-04-15 The fourth edition of this well-established and popular introductory textbook has been updated to cover recent developments in the field of International Relations and world events, whilst still navigating the complexities of the discipline for new students. Brown and Ainley provide systematic coverage of the classical concerns of International Relations theory - power, national interest, foreign policy and war - alongside analysis of the impact of globalization on security, governance and the world economy. The authors actively avoid using a singular theoretical lens to conduct their survey, instead evaluating and using many throughout this book to further illustrate the nuances of the discipline. This is all while maintaining the focus on the discipline's focus on real world events, with case studies ranging from the recent rise of China and Russia to the global economic downturn, to teach students how the discipline can be applied to understanding the central and difficult questions that the world faces today. Clear and accessible, but also critical and penetrating, this book is an essential text for undergraduate International Relations students today.
