Understanding Evidence-Based Practice in Nursing

Evidence-based practice (EBP) in nursing is the conscientious use of current best evidence to make decisions about patient care. It involves integrating clinical expertise, patient preferences, and the latest research findings to deliver superior healthcare. EBP ensures that nursing interventions are grounded in scientifically validated methods, ultimately enhancing patient safety and care quality. By regularly updating protocols according to new evidence, nurses play a pivotal role in promoting innovation and excellence within healthcare systems. The significance of evidence-based practice became even more apparent in 2022, as nurses adapted to evolving healthcare challenges and patient needs.

Top Evidence-Based Practice Nursing Topics in 2022

The year 2022 saw several critical evidence-based practice nursing topics gain prominence. These topics addressed pressing healthcare issues, patient safety concerns, and advances in technology and

treatment methodologies. Nursing professionals focused on these areas to ensure holistic, effective, and up-to-date care.

Infection Prevention and Control

Infection prevention remained a top priority for nurses in 2022, especially in the wake of ongoing global health threats. Evidence-based protocols for hand hygiene, personal protective equipment (PPE) usage, and environmental cleaning were rigorously updated. Research-driven interventions reduced healthcare-associated infections and promoted safer care environments.

Pain Management Strategies

Managing pain with evidence-based approaches was a major topic, focusing on multimodal pain management, non-pharmacological interventions, and opioid stewardship. Nurses adopted new guidelines to assess pain accurately and utilize both medication and alternative therapies, improving patient comfort and safety.

Pressure Injury Prevention

Pressure injuries, also known as pressure ulcers, were a significant area of focus. Evidence-based nursing practices emphasized early risk assessment, regular patient repositioning, skin care, and the use of pressure-relieving devices. Implementing these strategies reduced the incidence of pressure injuries in various healthcare settings.

Patient Falls Prevention

Preventing patient falls continued to be a priority in evidence-based nursing. Strategies included comprehensive risk assessments, environmental modifications, patient education, and the use of assistive devices. Regular audits and staff training ensured that interventions remained effective and up-to-date.

Chronic Disease Management

Evidence-based interventions for chronic conditions, such as diabetes, heart failure, and COPD, gained emphasis in 2022. Nurses implemented protocols for early detection, patient education, lifestyle modification, and medication adherence, resulting in improved long-term outcomes for patients with chronic diseases.

Telehealth and Remote Patient Monitoring

The expansion of telehealth services in 2022 required nurses to adopt evidence-based guidelines for virtual care delivery. Best practices included secure communication, accurate documentation, patient education, and monitoring chronic conditions remotely, ensuring continuity of care outside traditional settings.

evidence based practice nursing topics 2022: *The Future of Nursing 2020-2030* National Academies of Sciences Engineering and Medicine, Committee on the Future of Nursing 2020-2030, 2021-09-30 The decade ahead will test the nation's nearly 4 million nurses in new and complex ways. Nurses live and work at the intersection of health, education, and communities. Nurses work in a wide array of settings and practice at a range of professional levels. They are often the first and most frequent line of contact with people of all backgrounds and experiences seeking care and they represent the largest of the health care professions. A nation cannot fully thrive until everyone - no matter who they are, where they live, or how much money they make - can live their healthiest possible life, and helping people live their healthiest life is and has always been the essential role of nurses. Nurses have a critical role to play in achieving the goal of health equity, but they need robust education, supportive work environments, and autonomy. Accordingly, at the request of the Robert Wood Johnson Foundation, on behalf of the National Academy of Medicine, an ad hoc committee under the auspices of the National Academies of Sciences, Engineering, and Medicine conducted a study aimed at envisioning and charting a path forward for the nursing profession to help reduce inequities in people's ability to achieve their full health potential. The ultimate goal is the achievement of health equity in the United States built on strengthened nursing capacity and expertise. By leveraging these attributes, nursing will help to create and contribute comprehensively to equitable public health and health care systems that are designed to work for everyone. The Future of Nursing 2020-2030: Charting a Path to Achieve Health Equity explores how nurses can work to reduce health disparities and promote equity, while keeping costs at bay, utilizing technology, and maintaining patient and family-focused care into 2030. This work builds on the foundation set out by The Future of Nursing: Leading Change, Advancing Health (2011) report.

evidence based practice nursing topics 2022: *Exploring Evidence-based Practice* Martin Lipscomb, 2015-07-30 Despite sustained debate and progress the evolving thing that is evidence based nursing or practice (EBP) continues to dangle a variety of conceptual and practical loose threads. Moreover, when we think about what is being asked of students and registered or licenced practitioners in terms of EBP, it is difficult not to concede that this 'ask' is in many instances quite large and, occasionally, it may be unachievable. EBP has and continues to improve patient, client and user care. Yet significant questions concerning its most basic elements remain unresolved and, if nurses are to contribute to the resolution or reconfiguration of these questions then, as a first step, we must acknowledge their existence. From a range of international standpoints and perspectives, contributors to this book focus on aspects of EBP that require development. This focus is always robust and at times it is unashamedly provocative. Contributors challenge readers to engage with anomalies that surround the subject and readers are asked to consider the often precarious assumptions that underpin key aspects of EBP. While both conflict and concord are evident among the various offerings presented here, the book nonetheless creates and sustains a narrative that is bigger or more substantial than the sum of individual parts. And, across contributions, a self-assuredly critical stance towards EBP as currently practiced, conceptualized and taught coexists alongside respectful admiration for all who make it happen. *Exploring Evidence-based Practice: Debates and Challenges in Nursing* should be considered essential reading for academics and postgraduate students with an interest in evidence-based practice and nursing research.

evidence based practice nursing topics 2022: *The Future of Nursing* Institute of Medicine, Committee on the Robert Wood Johnson Foundation Initiative on the Future of Nursing, at the Institute of Medicine, 2011-02-08 *The Future of Nursing* explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles-including limits on nurses' scope of practice-should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.
