fema ics 100b answers: **Communicating Authority in Interorganizational Collaboration**

Rebecca M. Rice, 2021-11-03 The book offers an in-depth analysis of the challenges of establishing authority within collaborative efforts. It introduces the concept of cumulative authority, arguing that communicating authority effectively is key to the creation and success of collaborations. Rice uses a communication-as-constitutive of organizations perspective to reconsider organizational authority, typically thought of in terms of leadership, as instead negotiated in communication among collaboration members as they attempt to influence the collaboration's direction. Drawing from an extensive two-year case study of emergency management collaborations, the book traces potential influences on collaborative authority, including members' knowledge and expertise, organizational structures and hierarchies, and the material world, including documents, technologies, and the natural environment. This book is a valuable empirical resource for organizational communication and management students and scholars. It will also appeal to community collaborators and organizers, and contains advice and reflection questions for practitioners.

fema ics 100b answers: Adaptive Business Continuity: A New Approach David Lindstedt Ph.D., PMP, CBCP, Mark Armour, CBCP, 2017-06-05 Have you begun to question traditional best practices in business continuity (BC)? Do you seem to be concentrating on documentation rather than preparedness? Compliance rather than recoverability? Do your efforts provide true business value? If you have these concerns, David Lindstedt and Mark Armour offer a solution in *Adaptive Business Continuity: A New Approach*. This ground-breaking new book provides a streamlined, realistic methodology to change BC dramatically. After years of working with the traditional practices of business continuity (BC) – in project management, higher education, contingency planning, and disaster recovery – David Lindstedt and Mark Armour identified unworkable areas in many core practices of traditional BC. To address these issues, they created nine Adaptive BC principles, the foundation of this book: Deliver continuous value. Document only for mnemonics. Engage at many levels within the organization. Exercise for improvement, not for testing. Learn the business. Measure and benchmark. Obtain incremental direction from leadership. Omit the risk assessment and business impact analysis. Prepare for effects, not causes. *Adaptive Business Continuity: A New Approach* uses the analogy of rebuilding a house. After the initial design, the first step is to identify and remove all the things not needed in the new house. Thus, the first chapter is “Demolition” – not to get rid of the entire BC enterprise, but to remove certain BC activities and products to provide the space to install something new. The stages continue through foundation, framework, and finishing. Finally, the last chapter is “Dwelling,” permitting you a glimpse of what it might be like to live in this new home that has been created. Through a wealth of examples, diagrams, and real-world case studies, Lindstedt and Armour show you how you can execute the Adaptive BC framework in your own organization. You will: Recognize specific practices in traditional BC that may be problematic, outdated, or ineffective. Identify specific activities that you may wish to eliminate from your practice. Learn the capability and constraint model of recoverability. Understand how Adaptive BC can be effective in organizations with vastly different cultures and program maturity levels. See how to take the steps to implement Adaptive BC in your own organization. Think through some typical challenges and opportunities that may arise as you implement an Adaptive BC approach.

fema ics 100b answers: Nursing Management of Pediatric Disaster Catherine J. Goodhue, Nancy Blake, 2020-05-13 This textbook describes what nurses need to know about pediatric disaster nursing, including public policy, and addresses preparedness for all types of disasters (natural and

man-made) and strategies for hospital, school and community preparedness. The book opens with a brief history of disaster nursing and explains the key differences between pediatric and adult disaster nursing. Recent years have been marked by numerous man-made and natural disasters, which have led nurses to seek new resources to be better prepared, in their role as nurses, for all types of disasters. Responding to this lack of resources, the book focuses on the unique needs of babies and children. It is the first and only textbook on pediatric disaster preparedness to include both the physical and psychological effects of disaster. Key aspects covered include: the psychosocial differences in and how to approach children; family reunification; medications, supplies and equipment; and decontamination. Given its breadth of coverage, the book is well suited as a textbook for nursing classes, while also offering a valuable resource for nurses working in the field.

Left uncorrected, civic life and national continuity will remain increasingly at risk. At stake well beyond our shores is the stability and future direction of an international political and economic system dependent on robust and continued U.S. engagement. Outdated hierarchical, industrial structures and processes configured in 1947 for the Cold War no longer provide for the security and resilience of the homeland. Security governance in this post-industrial, digital age of complex interdependencies must transform to anticipate and if necessary manage a range of cascading catastrophic effects, whether wrought by asymmetric adversaries or technological or natural disasters. Security structures and processes that perpetuate a 20th century, top-down, federal-centric governance model offer Americans no more than a single point-of-failure. The strategic environment has changed; the system has not. Changes in policy alone will not bring resolution. U.S. security governance today requires a means to begin the structural and process transformation into what this book calls Network Federalism. Charting the origins and development of borders-out security governance into and through the American Century, the book establishes how an expanding techno-industrial base enabled American hegemony. Turning to the homeland, it introduces a borders-in narrative—the convergence of the functional disciplines of emergency management, civil defense, resource mobilization and counterterrorism into what is now called homeland security. For both policymakers and students a seminal work in the yet-to-be-established homeland security canon, this book records the political dynamics behind the creation of the Department of Homeland Security, the impact of Hurricane Katrina and the ongoing development of what is now called the Homeland Security Enterprise. The work makes the case that national security governance has heretofore been one-dimensional, involving horizontal interagency structures and processes at the Federal level. Yet homeland security in this federal republic has a second dimension that is vertical, intergovernmental, involving sovereign states and local governments whose personnel are not in the President's chain of command. In the strategic environment of the post-industrial 21st century, states thus have a co-equal role in strategy and policy development, resourcing and operational execution to perform security and resilience missions. This book argues that only a Network Federal governance will provide unity of effort to mature the Homeland Security Enterprise. The places to start implementing network federal mechanisms are in the ten FEMA regions. To that end, it recommends establishment of Regional Preparedness Staffs, composed of Federal, state and local personnel serving as co-equals on Intergovernmental Personnel Act (IPA) rotational assignments. These IPAs would form the basis of an intergovernmental and interdisciplinary homeland security professional cadre to build a collaborative national preparedness culture. As facilitators of regional unity of effort with regard to prioritization of risk, planning, resourcing and operational execution, these Regional Preparedness Staffs would provide the Nation with decentralized network nodes enabling security and resilience in this 21st century post-industrial strategic environment.

fema ics 100b answers: *Hazard Mitigation Grant Program Desk Reference (FEMA 345)* Federal Emergency Management Agency, 2013-02-01 FEMA's Hazard Mitigation Grant Program is a powerful resource in the combined effort by Federal, State, and local government, as well as private

industry and homeowners, to end the cycle of repetitive disaster damage. The Robert T. Stafford Disaster Relief and Emergency Assistance Act was passed on November 23, 1988, amending Public Law 93-288, the Disaster Relief Act of 1974. The Stafford Act included Section 404, which established the Hazard Mitigation Grant Program. In 1993, the Hazard Mitigation and Relocation Act amended Section 404 to increase the amount of HMGP funds available and the cost-share to 75 percent Federal. This amendment also encouraged the use of property acquisition and other non-structural flood mitigation measures. In an effort to streamline HMGP delivery, FEMA encourages States to develop their mitigation programs before disaster strikes. States are adopting a more active HMGP management role. Increased capabilities may include: Conducting comprehensive all-hazard mitigation planning prior to disaster events; Providing applicants technical assistance on sound mitigation techniques and hazard mitigation policy and procedures; Coordinating mitigation programs through interagency teams or councils. Conducting benefit-cost analyses; and Preparing National Environmental Policy Act reviews for FEMA approval. States that integrate the HMGP with their frequently updated State Administrative and Hazard Mitigation Plans will create cohesive and effective approaches to loss reduction. This type of coordinated approach minimizes the distinction between "pre-disaster" and "post-disaster" time periods, and instead produces an ongoing mitigation effort. Hazard mitigation is any sustained action taken to reduce or eliminate long-term risk to people and property from natural hazards and their effects. A key purpose of the HMGP is to ensure that the opportunity to take critical mitigation measures to protect life and property from future disasters is not lost during the recovery and reconstruction process following a disaster. Program grant funds available under Section 404 of the Stafford Act provide States with the incentive and capability to implement mitigation measures that previously may have been infeasible. The purpose of this Desk Reference is to: Provide comprehensive information about FEMA's Hazard Mitigation Grant Program (HMGP); Increase awareness of the HMGP as an integral part of statewide hazard mitigation efforts; and Encourage deeper commitments and increased responsibilities on the part of all States and communities to reduce damage and losses from natural disasters. This Desk Reference is organized to simplify program information and assist the reader with practical guidance for successful participation in the program. Lists of program-related acronyms and definitions are included, along with appendices that amplify selected aspects of the HMGP. This Desk Reference is organized into 14 sections, each of which presents a major HMGP subject area. In each section, information is presented on the right side of the page. In several sections, job aids containing supplemental material are provided. The job aids for each section can be found at the end of the section. At the front of each section, there is a detailed table of contents to help you locate specific information.

food and water What are Points of Distribution or PODs? During a disaster, one method of issuing supplies may not be enough. A Local Emergency Management Agency (LEMA) could use other distribution systems or use all of them at once. All three complement each other and provide expanded distribution coverage. For this Guide, we will focus on Points of Distribution or PODs. PODs can accommodate vehicle traffic (drive-thru), pedestrian traffic (walk thru), and mass transit traffic (bus or rail). Each person or vehicle receives a set amount of supplies. The recommended amount is for each person/vehicle to receive enough for a household of three. The amount of supplies provided will differ depending on the type of transportation used. For instance, more supplies are provided to someone in a car than to a pedestrian who must hand carry items.
