jenius training jack in the box: **Uncommon Dissent** William Dembski, 2014-05-13 Recent years have seen the rise to prominence of ever more sophisticated philosophical and scientific critiques of the ideas marketed under the name of Darwinism. In *Uncommon Dissent*, mathematician and philosopher William A. Dembski brings together essays by leading intellectuals who find one or more aspects of Darwinism unpersuasive. As Dembski explains, Darwinism has gathered around itself an aura of invincibility that is inhospitable to rational discussion—to say the least: “Darwinism, its proponents assure us, has been overwhelmingly vindicated. Any resistance to it is futile and indicates bad faith or worse.” Indeed, those who question the Darwinian synthesis are supposed, in the famous formulation of Richard Dawkins, to be ignorant, stupid, insane, or wicked. The hostility of dogmatic Darwinians like Dawkins has not, however, prevented the advent of a growing cadre of scholarly critics of metaphysical Darwinism. The measured, thought-provoking essays in *Uncommon Dissent* make it increasingly obvious that these critics are not the brainwashed fundamentalist buffoons that Darwinism’s defenders suggest they are, but rather serious, skeptical, open-minded inquirers whose challenges pose serious questions about the viability of Darwinist ideology. The intellectual power of their contributions to *Uncommon Dissent* is bracing.

jenius training jack in the box: Now: The Physics of Time Richard A. Muller, 2016-09-20 From the celebrated author of the best-selling *Physics for Future Presidents* comes "a provocative, strongly argued book on the fundamental nature of time" (Lee Smolin). You are reading the word now right now. But what does that mean? Now has bedeviled philosophers, priests, and modern-day physicists from Augustine to Einstein and beyond. In *Now*, eminent physicist Richard A. Muller takes up the challenge. He begins with remarkably clear explanations of relativity, entropy, entanglement, the Big Bang, and more, setting the stage for his own revolutionary theory of time, one that makes testable predictions. Muller's monumental work will spark major debate about the most fundamental assumptions of our universe, and may crack one of physics' longest-standing enigmas.

jenius training jack in the box: Human Accomplishment Charles Murray, 2009-10-13 A sweeping cultural survey reminiscent of Barzun's *From Dawn to Decadence*. At irregular times and in scattered settings, human beings have achieved great things. *Human Accomplishment* is about those great things, falling in the domains known as the arts and sciences, and the people who did them.' So begins Charles Murray's unique account of human excellence, from the age of Homer to our own time. Employing techniques that historians have developed over the last century but that have rarely been applied to books written for the general public, Murray compiles inventories of the people who have been essential to the stories of literature, music, art, philosophy, and the sciences—a total of 4,002 men and women from around the world, ranked according to their eminence. The heart of *Human Accomplishment* is a series of enthralling descriptive chapters: on the giants in the arts and what sets them apart from the merely great; on the differences between great achievement in the arts and in the sciences; on the meta-inventions, 14 crucial leaps in human capacity to create great art and science; and on the patterns and trajectories of accomplishment across time and geography. Straightforwardly and undogmatically, Charles Murray takes on some controversial questions. Why has accomplishment been so concentrated in Europe? Among men? Since 1400? He presents evidence that the rate of great accomplishment has been declining in the last century, asks what it means, and offers a rich framework for thinking about the conditions under which the human spirit has expressed itself most gloriously. Eye-opening and humbling, *Human Accomplishment* is a fascinating work that describes what humans at their best can achieve,

provides tools for exploring its wellsprings, and celebrates the continuing common quest of humans everywhere to discover truths, create beauty, and apprehend the good.

In his first major book, Lotto draws

jenius training jack in the box: Donnerjack Roger Zelazny, 1998-08-01 In our world, called the Verite, he is a Scottish laird, an engineer, and a master of virtual reality design. In the computer-generated universe of Virtu, created by the crash of the World Net, he is a living legend. Scientist and poet with a warrior's soul, Donnerjack strides like a giant across the virtual landscape he helped to shape. And now he has bargained with Death himself for the return of love. The Lord of Entropy claimed Ayradyss, Donnerjack's beloved dark-haired lady of Virtu, with no warning, leaving a hole in the Engineer's heart. But Death offered to return her to him for a price: a palace of bones...and their first-born child. Since offspring have never before resulted from any union of the two worlds, Donnerjack accepts Death's conditions--and leads his reborn lover far from the detritus and perpetual twilight of Deep Fields to his ancestral Scottish lands, hoping to build a sanctuary and a self for Ayradyss in the first world. But there is no escaping, because cataclysmic change is taking place in Virtu. A bizarre new religion is sweeping through this ever-shifting universe where the homely can be virtually beautiful, the lame can walk and the blind can see. Now it's threatening to spill over into Verite. And its credo is a call for a different kind of order. For all the ancient myths still occupy Virtu. And the Great Gods on Mt. Meru are amassing great armies in anticipation of the time when a vast computer system attempts to take over the reality that constructed it.
