language starts with p: Languages and Their Speakers Timothy Shopen, 1987-05-29
Languages and Their Speakers provides an introduction both to languages themselves and to their social functions. Written especially for nonlinguistics majors, the book considers how speakers know their languages—know them as grammatical systems and know them as part of a cultural matrix.

language starts with p: *Dominant Language Constellations* Joseph Lo Bianco, Larissa Aronin,

2020-09-07 This volume is dedicated to the concept and several applications of Dominant Language Constellations (DLC), by which it advances understanding of current multilingualism through addition of a novel perspective from which to view contemporary language use and acquisition. The term Dominant Language Constellation denotes the set of a person's or group's most expedient languages, functioning as an entire unit and enabling an individual or group to meet their needs in a multilingual environment. The volume presents pioneering contributions that employ DLC as the lens for analysing a wide array of issues. These include multilingual syntactic development, cross-linguistic interaction and multilingual production in formal and informal educational contexts, as well as linguistic profiles of multilingual groups used in elementary school and higher education. Other DLC issues include discussions of how identity, emotions and attitudes operate in various minority and majority contexts. Because the DLC concept does not assume any inherent hierarchy of languages it can serve as a framework public policy in multilingual countries/communities faced with challenging policy determinations regarding choice of languages for use in education settings and more widely in social institutions and the economy. Some chapters develop and extend the DLC concept, others adapt and apply it to a variety of contexts, both global and local. Many chapters feature educational and social settings across large parts of the world- Africa, Australia, Europe, North America (Canada and the USA) and Southeast Asia. The volume can serve as supplementary reading for courses on multilingualism, sociolinguistics, language policy and planning, educational linguistics, Second and Third Language Acquisition.

language starts with p: Language Development Over the Lifespan Kees de Bot, Robert W. Schrauf, 2010-05-26 Language Development Over the Lifespan is a reference resource for those conducting research on language development and the aging process, as well as a supplementary textbook for courses in applied linguistics/bilingualism programs that focus on language attrition/aging and adult literacy development in second languages. It offers an integrative approach to language development that examines changes in language over a lifetime, organized by different theoretical perspectives, which are presented by well-known international scholars.

language starts with p: A Language Management Approach to Language Problems Goro Christoph Kimura, Lisa Fairbrother, 2020-05-20 In recent years there has been increased interest in examining the treatment of language problems across different levels of society, ranging from individual interactional issues to language policy and planning at the national or supra-national level. Among the various approaches to tackle this issue, Language Management Theory (LMT) provides a framework to address behaviour towards language problems on different levels explicitly and comprehensively. Using LMT as a unifying theoretical concept, the chapters in this volume examine the links between micro and macro dimensions in their analyses of a variety of language problems in Asian and European contexts. This body of work illustrates that the LMT framework is

able to show the characteristics of different dimensions clearly, especially when combined with a conceptualization of the micro and macro as a continuum of intertwining elements. This volume will appeal both to those interested in language policy and planning as well as those interested in interaction between speakers from different language backgrounds.

A raucous trip through the odd corners of our alphabet. —The New York Times Let's get real—the English language is bizarre. A might be for apple, but it's also for aisle and aeons. Why does the word gnat start with a G but the word knot doesn't start with an N? It doesn't always make sense, but don't let these rule-breaking silent letters defeat you! This whimsical, funky book from Raj Halder (aka rapper Lushlife) turns the traditional idea of an alphabet book on its head, poking fun at the most mischievous words in the English language and demonstrating how to pronounce them. Fun and informative for word nerds of all ages!

language starts with p: *Phenomenology of Life. Meeting the Challenges of the Present-Day World* Anna-Teresa Tymieniecka, 2006-03-30 Philosophy has been always received or bypassed for its resonance or aloofness with the spirit of the time. Should not philosophy/phenomenology of life be expected to do more to ascertain its validity? Should it not pass the pragmatic test, that is to respond directly to the life-concerns of its time? What is the role of the philosopher and philosophy today? Due to the ever-advancing scientific, technological, social and cultural changes that are shaping human life and the life-world-in-transformation, we are desperately seeking a measure to estimate life's unfolding, a compass to stir the course between Scylla and Charibda to maintain human-hood and creative insight for laying the cornerstones for the unforeseeable unfolding of life dynamisms. It is this challenge which philosophy/phenomenology of life meets with underlying onto-poietic unraveling of the hidden logico concatenations of beingness-in-becoming. The present collection of essays offers contributions to answer this challenge by focusing upon measure, sharing-in-life, intersubjectivity and communication, societal equilibrium, education, and more. It will be of great interest to those working in the fields of Phenomenology, Philosophy, History of Philosophy, and Contemporary Philosophy.

language starts with p: Language, Nations, and Multilingualism Ying-Ying Tan, Pritipuspa Mishra, 2020-12-30 Language, Nations, and Multilingualism explores the legacy of Herder's ideas about the relationship between language and nationalism in the post-colonial world. Focusing on how anti-colonial and post-colonial nations reconcile their myriad multilingualisms with the Herderian model of one language-one nation, it shows how Herder's model is both attractive and problematic for such nations. Why then does the Herderian model have such valency? How has the Herderian ideal of one nation-one language continued to survive beneath the uncomfortable resolution struck by new multilingual nations as they create fictions of a singular national mother tongue? To what extent is Herder still relevant in our contemporary world? How have different nations negotiated the Herderian ideal in different ways? What does the way in which multilingual post-colonial nations deal with this crisis tell us about a possible alternative framework for understanding the relationship between language and nation? By approaching this investigation from diverse archives across Asia, Africa, Europe, Latin America, and the Caribbean, Language, Nations, and Multilingualism proposes answers to the aforementioned questions from a global perspective that takes into account the specificities of a range of colonial experiences and political regimes. And by extending the discussion backwards in time to offer a more historical reading of the making of modern nations, it allows us to see how multilingualism has always disrupted constructions of monoglot nations.

language starts with p: *New Empirical Perspectives on Translation and Interpreting* Lore Vandevoorde, Joke Daems, Bart Defrancq, 2019-12-06 Drawing on work from both eminent and emerging scholars in translation and interpreting studies, this collection offers a critical reflection on current methodological practices in these fields toward strengthening the theoretical and empirical ties between them. Methodological and technological advances have pushed these respective areas of study forward in the last few decades, but advanced tools, such as eye tracking and keystroke logging, and insights from their use have often remained in isolation and not shared across disciplines. This volume explores empirical and theoretical challenges across these areas and the subsequent methodologies implemented to address them and how they might be mutually applied across translation and interpreting studies but also brought together toward a coherent empirical theory of translation and interpreting studies. Organized around three key themes—target-text orientedness, source-text orientedness, and translator/interpreter-orientedness—the book takes stock of both studies of translation and interpreting corpora and processes in an effort to answer such key questions, including: how do written translation and interpreting relate to each other? How do technological advances in these fields shape process and product? What would an empirical theory of translation and interpreting studies look like? Taken together, the collection showcases the possibilities of further dialogue around methodological practices in translation and interpreting studies and will be of interest to students and scholars in these fields.

Established and emerging scholars of African languages who are active and current in their fields are brought together, each making use of data from a linguistic group in Africa to explicate a chosen theme within their area of expertise, and illustrate the practice of the discipline in the continent.

language starts with p: Thinking Through the Curriculum Robert Burden, Marion Williams, 2002-01-04 This book tackles the contentious issue of whether and how thinking should be taught in schools. It explores how best to help children become effective thinkers and learners. The book also examines whether there is one set of underlying cognitive skills and strategies which can be applied across all the curriculum subjects and beyond. Its main thrust, however, is a detailed examination of approaches to developing cognitive skills which are specific to the National Curriculum. The book provides chapters from both generalists and subject specialists to illustrate how teachers in different subject areas can benefit from taking a cognitive approach to their subject.

It will give teachers a clear understanding of different approaches to teaching thinking and how these fit together.

Old patterns are losing their validity and relevance, new patterns are needed and in demand. We need a new approach which can formulate, generate and engage such patterns. The pattern language approach of Christopher Alexander serves this purpose – the interdisciplinary and participatory building blocks for societal change. The PURPLSOC 2017 conference contributions cover 25 domains – from anthropology and automation to political science and systems science – for a comprehensive perspective of current pattern research and practice.

language starts with p: Second Language Acquisition and Lifelong Learning Simone E. Pfenninger, Julia Festman, David Singleton, 2023-05-05 Language fundamentally defines and distinguishes us as humans, as members of society, and as individuals. As we go through life, our relationship with language and with learning shifts and changes, but it remains significant. This book is an up-to-date resource for graduate students and researchers in second language (L2) acquisition who are interested in language learning across the lifespan. The main goal is to survey and evaluate what is known about the linguistic-cognition-affect associations that occur in L2 learning from birth through senescence (passing through the stages of childhood, adolescence, adulthood, and third age), the extent to which L2 acquisition may be seen as contributing to healthy and active aging, the impact of the development of personalized, technology-enhanced communicative L2 environments, and how these phenomena are to be approached scientifically and methodologically. The effects of certain specific variables, such as gender, socio-economic background, and bilingualism are also analyzed, as we argue that chronological age does not determine the positioning of L2 learners across the lifespan: age is part of a complex web of social distinctions such as psychological and individual factors that intersect in the construction of a learner's relative status and opportunities.

language starts with p: Sensory Experiences Danièle Dubois, Caroline Cance, Matt Coler, Arthur Paté, Catherine Guastavino, 2021-12-15 Sensory Experiences: Exploring meaning and the senses describes the collective elaboration of a situated cognitive approach with an emphasis on the relations between language and cognition within and across different sensory modalities and practices. This approach, grounded in 40 years of empirical research, is a departure from the analytic, reductive view of human experiences as information processing. The book is structured into two parts. Each author first introduces the situated cognitive approach from their respective sensory domains (vision, audition, olfaction, gustation). The second part is the collective effort to derive methodological guidelines respecting the ecological validity of experimental investigations while formulating operational answers to applied questions (such as the sensory quality of environments and product design). This book will be of interest to students, researchers and practitioners dealing with sensory experiences and anyone who wants to understand and celebrate the cultural diversity of human productions that make life enjoyable!

language starts with p: English and the Discourses of Colonialism Alastair Pennycook, 2002-09-11 English and the Discourses of Colonialism opens with the British departure from Hong Kong marking the end of British colonialism. Yet Alastair Pennycook argues that this dramatic exit masks the crucial issue that the traces left by colonialism run deep. This challenging and provocative book looks particularly at English, English language teaching, and colonialism. It reveals how the practice of colonialism permeated the cultures and discourses of both the colonial and colonized nations, the effects of which are still evident today. Pennycook explores the extent to which English

is, as commonly assumed, a language of neutrality and global communication, and to what extent it is, by contrast, a language laden with meanings and still weighed down with colonial discourses that have come to adhere to it. Travel writing, newspaper articles and popular books on English, are all referred to, as well as personal experiences and interviews with learners of English in India, Malaysia, China and Australia. Pennycook concludes by appealing to postcolonial writing, to create a politics of opposition and dislodge the discourses of colonialism from English.

language starts with p: Learning and Memory - From Molecules and Cells to Mind and Behavior Thomas Heinbockel, 2024-06-05 This book is dedicated to "learning and memory," a concept at the heart of neuroscience. Learning is about acquiring knowledge and skills, forming memories, and how behavior changes based on past experiences. Learning is closely related to memory. Memory is about the recall and expression of what one has learned. This book presents contributions to learning and memory, ranging from molecular, cellular, anatomical, developmental, and systems to disease-oriented studies. As such, the book provides a gateway for newly interested investigators and serves as a resource for seasoned researchers of learning and memory. Targeted at students and researchers in biological, medical, and behavioral disciplines, this book offers an overview of the work that is being done in this field and highlights any gaps and areas that would benefit from further exploration. Individual chapters focus on research advances in different brain regions and experimental models. In addition, the book will contribute to the training of current and future neuroscientists.

language starts with p: *The Cambridge Handbook of Sociocultural Psychology* Jaan Valsiner, Alberto Rosa, 2007-06-04 This book, first published in 2007, is an international overview of the state of our knowledge in sociocultural psychology - as a discipline located at the crossroads between the natural and social sciences and the humanities. Since the 1980s, the field of psychology has encountered the growth of a new discipline - cultural psychology - that has built new connections between psychology, sociology, anthropology, history and semiotics. The handbook integrates contributions of sociocultural specialists from fifteen countries, all tied together by the unifying focus on the role of sign systems in human relations with the environment. It emphasizes theoretical and methodological discussions on the cultural nature of human psychological phenomena, moving on to show how meaning is a natural feature of action and how it eventually produces conventional symbols for communication. Such symbols shape individual experiences and create the conditions for consciousness and the self to emerge; turn social norms into ethics; and set history into motion.

language starts with p: Essentials of Programming Languages, third edition Daniel P. Friedman, Mitchell Wand, 2008-04-18 A new edition of a textbook that provides students with a deep, working understanding of the essential concepts of programming languages, completely revised, with significant new material. This book provides students with a deep, working understanding of the essential concepts of programming languages. Most of these essentials relate to the semantics, or meaning, of program elements, and the text uses interpreters (short programs that directly analyze an abstract representation of the program text) to express the semantics of many essential language elements in a way that is both clear and executable. The approach is both analytical and hands-on. The book provides views of programming languages using widely varying levels of abstraction, maintaining a clear connection between the high-level and low-level views. Exercises are a vital part of the text and are scattered throughout; the text explains the key concepts, and the exercises explore alternative designs and other issues. The complete Scheme code for all the interpreters and analyzers in the book can be found online through The MIT Press web site. For this new edition, each chapter has been revised and many new exercises have been added. Significant additions have been made to the text, including completely new chapters on modules and continuation-passing style. Essentials of Programming Languages can be used for both graduate and undergraduate courses, and for continuing education courses for programmers.

language starts with p: Teaching Modern Languages Ann Swarbrick, 2002-03-11 Modern language classrooms are currently dominated by the communicative method of language teaching. This reader draws together recent and newly commissioned papers to show the origins of communicative methodology, how it has developed, what its research justification is and how it can most effectively be used in the classroom. Various chapters examine the particular challenges of differentiation, teaching grammar, encouraging pupils to use the target language together and teaching a foreign language to children with special educational needs. The final section discusses ways of developing creativity in the modern languages classroom through the use of drama, creative writing and role play. Anyone involved in teaching modern languages will find this reader a rich source for reflection and good practice.
