Especially helpful is the information revealed through eye-movement recordings about the many subliminal factors involved in the process of reading, as well as the changes produced by today's web-based computer techniques to modify the basic visual/functional, perceptual, and information-processing skills that comprise the silent reading process. In addition, the book will serve as a resource for graduate courses that cover what occurs during silent reading and what outcomes are possible with current reading practice programs using web-based computer technology. This unique text is essential reading for all who want to understand the role of the eye in silent reading and want to increase their instructional capability as teachers and remediation specialists.

Ramon loved to draw. Anytime. Anything. Anywhere. Drawing is what Ramon does. It's what makes him happy. But in one split second, all that changes. A single reckless remark by Ramon's older brother, Leon, turns Ramon's carefree sketches into joyless struggles. Luckily for Ramon, though, his little sister, Marisol, sees the world differently. To what extent we must have achieved our purpose, our readers must decide. My good friend and associate, J. T. (Terry) McGuire, and I have been working very closely together for a long time. Our view of engineering problems and of their solutions coincide to an astonishing degree. When I was asked to prepare a second edition of my book *Centrifugal Pumps*, it was logical that I turned to Terry and suggested that he be my coauthor on this project. He agreed to do so, and his cooperation has been most valuable, both in improving the resultant work and in easing my burden. It would be presumptuous on my part to pretend that nothing has changed in the technology of centrifugal pumps during the 30 years since I prepared the manuscript for the first edition of this book. Let me, then, speak of some of these changes.
