National Research Council, Division on Engineering and Physical Sciences, Committee on Applied and Theoretical Statistics, Policy and Global Affairs, Committee on Science, Technology, and Law, Committee on Identifying the Needs of the Forensic Sciences Community, 2009-07-29 Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

precision exams new mexico: Uncommon Measures National Research Council, Division of Behavioral and Social Sciences and Education, Board on Testing and Assessment, Committee on Equivalency and Linkage of Educational Tests, 1998-12-30 The issues surrounding the comparability of various tests used to assess performance in schools received broad public attention during congressional debate over the Voluntary National Tests proposed by President Clinton in his 1997 State of the Union Address. Proponents of Voluntary National Tests argue that there is no widely understood, challenging benchmark of individual student performance in 4th-grade reading and 8th-grade mathematics, thus the need for a new test. Opponents argue that a statistical linkage among tests already used by states and districts might provide the sort of comparability called for by the president's proposal. Public Law 105-78 requested that the National Research Council study whether an equivalency scale could be developed that would allow test scores from existing commercial tests and state assessments to be compared with each other and with the National Assessment of Education Progress. In this book, the committee reviewed research literature on the statistical and technical aspects of creating valid links between tests and how the content, use, and purposes of education testing in the United States influences the quality and meaning of those links. The book summarizes relevant prior linkage studies and presents a picture of the diversity of state testing programs. It also looks at the unique characteristics of the National Assessment of Educational Progress. Uncommon Measures provides an answer to the question posed by Congress in Public Law 105-78, suggests criteria for evaluating the quality of linkages, and calls for further research to determine the level of precision needed to make inferences about linked tests. In arriving at its conclusions, the committee acknowledged that ultimately policymakers and educators must take responsibility for determining the degree of imprecision they are willing to tolerate in testing and linking. This book provides science-based information with which to make those decisions.

precision exams new mexico: Military Encounters with Extraterrestrials Frank Joseph, 2018-09-11 The first, comprehensive military history of armed confrontations between humans and extraterrestrials • Includes documentation of incidents from World War I, World War II, the Korean War, the Vietnam War, the Gulf War, and the ongoing hostilities in the Middle East • Reveals the U.S. Navy's defeat in Antarctica by ETs, the shoot-down of "flying saucers" at Roswell, alien sabotage of nuclear weapons, in-flight abductions of USAF and Soviet officers, and photographic evidence of the Battle of Los Angeles • Explains the link between the development of atomic bombs and ballistic missiles and the increase in extraterrestrial intervention in the 20th century Although close encounters with alien space craft are reported as far back as the reign of Pharaoh Thutmose III in Egypt, it wasn't until the 20th century that UFO sightings and extraterrestrial encounters were truly documented, due to advances in technology and record-keeping as well as the vast increase in incidents, particularly with military forces. Revealing his extensive research and the verifiable evidence he's discovered, Frank Joseph presents a comprehensive military history of armed confrontations between humans and extraterrestrials in the 20th and 21st centuries. He explains how, with the development of atomic bombs and ballistic missiles, the frequency of extraterrestrial intervention in human affairs increased dramatically. He documents incidents both famous and little known, including the explosive demolition of U.S. munitions factories in 1916 by unearthly aerial vehicles, the Red Baron's dogfight with a UFO during World War I, "foo fighter" sightings and battles with Allied and Axis combatants during World War II, and eye-witness reports from encounters during the Korean War, the Vietnam War, the Gulf War in Iraq, and the ongoing hostilities in the Middle East. He examines the evidence for the shoot-down of "flying saucers" at Roswell and Aztec, New Mexico, alien sabotage of nuclear weapons systems, and in-flight abductions of USAF and Soviet officers and airplanes. He explores the photo evidence for the Battle of Los Angeles, which occurred three months after Pearl Harbor, and the details of Operation Highjump, the U.S. Navy's defeat in Antarctica by ET forces 17 months after the atomic bomb was dropped on Nagasaki, while also uncovering evidence of secret Antarctic German bases. The author also examines recent, 21st-century examples of alien interdiction in Earthly affairs, such as the meltdown of the Fukushima Daiichi nuclear plant in Japan and the fiery abort of Elon Musk's Falcon 9 missile launch, both events accompanied by UFOs. Offering complete disclosure of the multitude of ET events over the past century, Frank Joseph gives us the first true reference book in the field of alien

military encounters.

precision exams new mexico: *The New Death* Shannon Lee Dawdy, Tamara Kneese, 2022-04-15 *The New Death* brings together scholars who are intrigued by today's rapidly changing death practices and attitudes. New and different ways of treating the body and memorializing the

dead are proliferating across global cities. Using ethnographic, historical, and media-based approaches, the contributors to this volume focus on new attitudes and practices around mortality and mourning—from the possibilities of digitally enhanced afterlives to industrialized “necro-waste,” the ethics of care, the meaning of secular rituals, and the political economy of death. Together, the chapters coalesce around the argument that there are two major currents running through the new death—reconfigurations of temporality and of intimacy. Pushing back against the folklorization endemic to anthropological studies of death practices and the whiteness of death studies as a field, the chapters strive to override divisions between the Global South and the Anglophone world, focusing instead on syncretization, globalization, and magic within the mundane.
