Stockman-Shomron, Israel, *The Middle East and the Great Powers* presents the Israel-Arab conflict to the general public in a uniquely comprehensive and interdisciplinary format. Its form and content reflect the most serious efforts of Israel's intellectual community to analyze the conflict situation in which they live, objectively and honestly. The book argues that recent events have reduced the U.S. role, and changed the policy parameters in the region. A broad cross-section of Israel's foremost orientalists, historians, jurists and political scientists have contributed a selection of articles and lexicons which embody the essential aspects of the conflict in its broadest sense. Each key element is analyzed within a number of categories: the ideological-theological plane (Judaism, Zionism, the Holocaust, Jerusalem and the three monotheistic religions); the Palestinian sphere (PLO ideology, Jordan and the Judea & Samaria Region, the PLO and the war in Lebanon); the superpowers and the wider region (Iran-Iraq, the Islamic resurgence, oil, the Soviet Union and the Middle East, the United States and Israel), etc. Detailed lexicons offer concise factual breakdowns of both the Middle East (inter-Arab aspects, key Arab countries, conventional and nuclear Arab armaments) and the Arab-Israel context (chronology of the conflict, key events and personalities in Zionism, UN involvement, international legal aspects).

Over the centuries, the macroscopic view of the human being has been enhanced with an anatomical and functional degree of detail, such that no physician can no longer memorise this wealth of information. With modern imaging tools, the information which may be obtained from a particular patient will move further from the macroscopic to the microscopic detail. This information will neither be imprinted on film or paper nor stored in the PC, but will, rather, reside on the network. Intelligent processing and management of this imaging information contributes to new possibilities for computer assisted diagnosis and therapy. CARS 2000 focuses on these computer and communication tools. Radiologists, surgeons, computer scientists and engineers from over 40 countries are actively supporting these aims of CARS. This demonstrates that advancing patient care is best served by international and interdisciplinary cooperation, and this publicatio
