respiratory therapy week 2022: Critical Care Psychology and Rehabilitation Kirk J. Stucky, Jennifer Stevenson Jutte, 2021-12-03 When contemplating the broad field of critical care and all of its complexities, rehabilitation and psychology practice is not likely among the top ten services that clinicians, patients, or the public think of, and rightly so. The vast majority of patients who require intensive care arrive at death's door, and many linger in a limbo-like space somewhere between life and the afterlife. The primary focus at this juncture is often on pressing matters such as reestablishing and stabilizing basic bodily functions, optimizing life-saving machine settings, and deciding who does and does not need additional, urgent interventions. Still, just beneath the surface of this fascinating, multilayered environment, the need for psychologists and rehabilitation-oriented clinicians is everywhere, in large part because intensive care stands among the most emotionally intense and physically taxing hospital-based settings for everyone involved - patients, families, caregivers, and staff alike. Despite this, recognition that psychologists and rehabilitation-oriented professionals could and should be more integrated within the critical care team is uncommon. In fact, it can be argued that some European countries are ahead of the United States (US) in this regard (Agarwala, Ahmed, & Patil, 2011; Andreoli, Novaes, Karam, & Knobel, 2001; Jackson & Jutte, 2016; Peris et al., 2011; Sukantarat, Greer, Brett, & Williamson, 2007; Tan, Brett, & Stokes, 2009; Van den Born-van Zanten, Dongelmans, Dettling-Ihnenfeldt, Vink, & Van der Schaaf, 2016). Fortunately, there are growing integrative trends in the US. In 2010, a conference was convened by the Society of Critical Care Medicine (SCCM) with broad goals to inform stakeholders about the multiple long-term consequences of critical illness (e.g., Postintensive Care Syndrome [PICS]) and initiate--

respiratory therapy week 2022: *Disability Worlds* Faye Ginsburg, Rayna Rapp, 2024-03-18 In *Disability Worlds*, Faye Ginsburg and Rayna Rapp chronicle and theorize two decades of immersion in New York City's wide-ranging disability worlds as parents, activists, anthropologists, and disability studies scholars. They situate their disabled children's lives among the experiences of advocates, families, experts, activists, and artists in larger struggles for recognition and rights. Disability consciousness, they show, emerges in everyday politics, practices, and frictions. Chapters consider dilemmas of genetic testing and neuroscientific research, reimagining kinship and community, the challenges of "special education," and the perils of transitioning from high school. They also highlight the vitality of neurodiversity activism, disability arts, politics, and public culture. *Disability Worlds* reflects the authors' anthropological commitments to recognizing the significance of this fundamental form of human difference. Ginsburg and Rapp's conversations with diverse New Yorkers reveal the bureaucratic constraints and paradoxes established in response to the disability rights movement, as well as the remarkable creativity of disabled people and their allies who are opening pathways into both disability justice and disability futures.

Demographic projections estimate that by 2050, the number of people aged 65 and older in the world will soar to 1.5 billion, approximately one-third of the total population. Medical and technological advances have certainly contributed to enhanced longevity. However, with advanced age, there is a concomitant elevation in the prevalence of chronic diseases. These diagnoses carry the extensive costs and burdens of serious illnesses, and also mean that family caregivers of loved ones with these conditions experience significant challenges, placing them at extreme risk for a variety of stress-related illnesses and afflictions, and accounting for high rates of morbidity and mortality.
