revive science wellness: *Integrating East Asian Medicine into Contemporary Healthcare* E-Book Volker Scheid, Hugh MacPherson, 2011-10-24 Traditional East Asian healthcare systems have moved rapidly from the fringes of healthcare systems in the West towards the centre over the past 50 years. This change of status for traditional medicines presents their practitioners with both opportunities and challenges as the focus shifts from one of opposition towards one of integration into biomedically dominated healthcare systems. *Integrating East Asian Medicine into Contemporary Healthcare* examines the opportunities and challenges of integrating East Asian medicine into Western healthcare systems from an interdisciplinary perspective. Volker Scheid and Hugh MacPherson bring together contributions from acknowledged experts from a number of different disciplines - including clinical researchers, Chinese Medicine practitioners, historians, medical anthropologists, experts in the social studies of science, technology and medicine - to examine and debate the impact of the evidence-based medicine movement on the ongoing modernization of East Asian medicines. The book considers the following questions: •What are the values, goals and ethics implicit within traditional East Asian medical practices? • What claims to effectiveness and safety are made by East Asian medical practices? •What is at stake in subjecting these medical practices to biomedical models of evaluation? • What constitutes best practice? How is it to be defined and measured? • What are the ideologies and politics behind the process of integration of East Asian medical practices into modern health care systems? • What can we learn from a variety of models of integration into contemporary healthcare?

revive science wellness: *Science Transformed?* Alfred Nordmann, Hans Radder, Gregor Schiemann, 2014-08-10 Advancements in computing, instrumentation, robotics, digital imaging, and simulation modeling have changed science into a technology-driven institution. Government, industry, and society increasingly exert their influence over science, raising questions of values and objectivity. These and other profound changes have led many to speculate that we are in the midst of an epochal break in scientific history. This edited volume presents an in-depth examination of these issues from philosophical, historical, social, and cultural perspectives. It offers arguments both for and against the epochal break thesis in light of historical antecedents. Contributors discuss topics such as: science as a continuing epistemological enterprise; the decline of the individual scientist and the rise of communities; the intertwining of scientific and technological needs; links to prior practices and ways of thinking; the alleged divide between mode-1 and mode-2 research methods; the commodification of university science; and the shift from the scientific to a technological enterprise. Additionally, they examine the epochal break thesis using specific examples, including the transition from laboratory to real world experiments; the increased reliance on computer imaging; how analog and digital technologies condition behaviors that shape the object and beholder; the cultural significance of humanoid robots; the erosion of scientific quality in experimentation; and the effect of computers on prediction at the expense of explanation. Whether these events represent a historic break in scientific theory, practice, and methodology is disputed. What they do offer is an important occasion for philosophical analysis of the epistemic, institutional and moral questions affecting current and future scientific pursuits.

revive science wellness: *The Journey from Illness to Wellness (I to WE)* Debi Prasad Acharjya, 2019-08-27 Are you ready to transform your current thoughts, beliefs and assumptions? Are you ready to optimize your health and energy, amplify your physical strength and create outrageous results in every single area of your life? Humans possess an innate self-healing potential, an 'inner wisdom of the body'. Accessing this self-healing system is the primary goal of the healing arts. And addressing the cause of any illness is the first step towards accessing the body's own healing potential. Too much health emphasis today is on the magic bullets (introduced every other day) to fix sickness. Even with drugs, the body does the healing. The medical profession will openly admit that they do not have a cure for any autoimmune disease and can only treat to offer relief to victims. Which is why natural, non-pharmaceutical measures should generally be the first approach - not the last resort! Both in the Indian system of Ayurveda and even in modern medicine, there have been attempts to stress the role of the mind in disease. William Harvey so graphically described the role of the mind in disease when he wrote in 1648 AD, "When in anger, the pupils contract, in infamy and shame, the cheeks blush, in lust does the member gets distended and erected in no time!"

revive science wellness: Critical Pedagogy for Healing Tricia Kress, Christopher Emdin, Robert Lake, 2021-12-02 This is the first book to explicitly link healing and wellness practices with critical pedagogy. Bringing together scholars from Brazil, Canada, Malta and the USA, the chapters combine critical pedagogy and social justice education to reorient the conversation around wellness in teaching and learning. Working against white Eurocentric narratives of wellness in schools which focus on the symptoms, not the causes, of society's sickness, the authors argue for a soul revival of education which tackles, head on, the causes of dis-ease in society, from institutional racism, colonialism, xenophobia and patriarchy. The contributors provide fresh perspectives that address short-term goals of wellness alongside long-term goals of healing in schools and society by attending to underlying causes of social sickness. The chapters bridge theory and practice, bringing diverse historical and contemporary philosophical discussions around wellness into contact with concrete examples of the interconnections between wellness, education, and social justice. Examples of topics covered include: Buddhist practices for healing, Black liberation theology, hip hop pedagogy, anxiety and vulnerability, art therapy and story-telling.

revive science wellness: Encyclopedia of Science and Technology Communication Susanna Hornig Priest, 2010-07-14 In the academic world, the term science communication refers both to a set of professions (such as science journalism and public information work) and to an interdisciplinary scholarly research specialization. Much of this research is aimed at improving our understanding of the best ways to communicate complex information, especially to people who are not scientists. Science communication specialists are concerned with giving people useful information about health, environment, and technology - as well as science itself. In order to do this, we also need to improve our understanding of how people think, form opinions, and process information. Additionally, professional practitioners in science communication are engaged in strategic and ethical decisions every day, such as: How should reporters cover the issue of climate change? Should the views of scientists who do not believe that climate change has been caused by human activity be included alongside the views of those who do, in order to give a balanced story, or does this mislead the public into thinking that both of these positions are equally accepted within the scientific community? The Encyclopedia of Science and Technology Communication provides information on the entire range of interrelated issues in this interdisciplinary field in one place, along with clear suggestions on where to begin the search for more. Geared towards undergraduate and graduate students in journalism, communication, mass communication, and media studies, as well as towards working journalists, public information officers, and public relations specialists, this encyclopedia introduces this vast, fascinating field while challenging the reader to question assumptions inherent in communication across disciplinary boundaries. revive science wellness: Essentials of Medicinal and Aromatic Crops Muhammad Zia-Ul-Haq, Arwa Abdulkreem AL-Huqail, Muhammad Riaz, Umar Farooq Gohar, 2023-10-09 Medicinal and aromatic crops (MACs) are high-value crops since the natural products obtained from them are low-volume high-value commodities that have numerous applications in various sectors such as the food, beverage, food supplement, flavor and fragrance, perfumery and cosmetics, pharmaceutical and aromatherapy industries. In addition, the plant biomass is used in the production of teas and medical applications in traditional and also modern medicines. MACs are important mainly because they contain plant secondary metabolites such as essential oils, alkaloids, glycosides, saponins, tannins, vitamins and other bioactives. Plant secondary metabolites are differentiated from plant primary metabolites of photosynthesis and respiration since they are directly involved in growth and development of plants. Some MACs are used as spices and culinary herbs since they contain mainly essential oils, and are used as tonic to the digestive system, appetite modification and other systems and may facilitate nutrient uptake and utilization from various foods. A significant amount of MACs and their natural products have also demonstrated antimicrobial, antifungal and bactericidal activity and significant antioxidant capacity. In the past, MACs and their natural products have been used as a source for various medicines, in food and beverage production and in aroma products. *Essentials of Medicinal and Aromatic Crops* summarizes the current knowledge on medicinal and aromatic crops, including the agronomical practices of important MACs and their products, their beneficial effects and utilization of MAP and their products. The chapters provide a comprehensive guide to the most important and used medicinal and aromatic crops and their use in functional foods, nutraceuticals and as bioactives against various ailments, providing researchers, teachers, chemists, food scientists, agronomists and agroecologists in academia, industry and government a fully up to date singular source on this important topic.

revive science wellness: The Myth of Normal Gabor Maté, MD, 2022-09-13 The instant New York Times bestseller By the acclaimed author of *In the Realm of Hungry Ghosts*, a groundbreaking investigation into the causes of illness, a bracing critique of how our society breeds disease, and a pathway to health and healing. In this revolutionary book, renowned physician Gabor Maté eloquently dissects how in Western countries that pride themselves on their healthcare systems, chronic illness and general ill health are on the rise. Nearly 70 percent of Americans are on at least one prescription drug; more than half take two. In Canada, every fifth person has high blood pressure. In Europe, hypertension is diagnosed in more than 30 percent of the population. And everywhere, adolescent mental illness is on the rise. So what is really “normal” when it comes to health? Over four decades of clinical experience, Maté has come to recognize the prevailing understanding of “normal” as false, neglecting the roles that trauma and stress, and the pressures of modern-day living, exert on our bodies and our minds at the expense of good health. For all our expertise and technological sophistication, Western medicine often fails to treat the whole person, ignoring how today’s culture stresses the body, burdens the immune system, and undermines emotional balance. Now Maté brings his perspective to the great untangling of common myths about what makes us sick, connects the dots between the maladies of individuals and the declining soundness of society—and offers a compassionate guide for health and healing. Cowritten with his son Daniel, *The Myth Of Normal* is Maté’s most ambitious and urgent book yet.
