s95 fdny practice test: Hives of Sickness David Rosner, 1995 An 1865 report on public health in New York painted a grim picture of high brick blocks and closely-packed houses . . . literally hives of sickness propagating epidemics of cholera, smallpox, typhoid, typhus, and yellow fever, which swept through the whole city. In this stimulating collection of essays, nine historians of American medicine explore New York's responses to its public health crises from colonial times to the present. The essays illustrate the relationship between the disease environment of New York and changes in housing, population, social conditions, and the success of medical science, linking such factors to New York's experiences with smallpox, polio, and AIDS. The volume is essential reading for anyone interested in American public health and the social history of New York. The contributors are Ronald Bayer, Elizabeth Blackmar, Gretchen A. Condran, Elizabeth Fee, Daniel M. Fox, Evelyn M. Hammonds, Alan M. Kraut, Judith Walzer Leavitt, and Naomi Rogers. David Rosner is a professor of history at Baruch College and The Graduate School of the City University of New York. Robert R. Macdonald is the director of the Museum of the City of New York. A publication of the Museum of the City of New York Choice Reviews 1995 November This is one of a series of books focusing on the impact of disease intended to enhance the understanding of both past and present regarding reactions to periodic epidemics. Robert B. Macdonald, director of the Museum of the City of New York, which supports this series, states: The individual and collective responses to widespread sickness are mirrors to the cultural, religious, economic, political, and social histories of cities and nations. Rosner selected eight renowned and respected individuals to describe the reactions and responses to smallpox, polio, and AIDS epidemics in New York City since 1860, and the efforts of officials and professionals to deal with the impact of disease. Essayists present disease broadly from economic, social, political, and health perspectives. Causes of epidemics include the expected and usual: thousands of immigrants pouring into the city, inadequate water and food supplies, lack of sewage disposal, unemployment leading to poverty. An unexpected cause was the avarice of real estate investors, inexorably driving up housing costs. Highly recommended for all students of history, public health, health policy, and sociology. s95 fdny practice test: Preventing Violent Conflict in Africa Y. Mine, F. Stewart, S. Fukuda-Parr, T. Mkandawire, 2013-10-17 Horizontal inequalities are root causes of violent conflict in Africa. Yet, people take actions not because of statistical data on inequalities, of which they might not be aware, but because of injustices they perceive. This volume analyses the results of original

surveys with over 3,000 respondents in African cities and towns, exposing clear discrepancies between objective inequalities and people's subjective perceptions. The contributors examine experiences in country pairs and probe into the reasons why neighbouring countries, sharing common historical traits, sometimes took contrasting pathways of peace and violent conflict. Combining quantitative analysis and qualitative anatomy of historical experiences of conflict and reconciliation in Rwanda, Burundi, Ghana, Côte d'Ivoire, South Africa, Zimbabwe, Uganda, Tanzania, Kenya and Nigeria, the study brings forward a set of policy recommendations for development practitioners. This work further addresses the issue of institutional choice and reveals how sustainable power-sharing and decentralisation contribute to political stability in Africa.

s95 fdny practice test: The State of Food Insecurity in the World 2009 Food and Agriculture Organization of the United Nations, 2009-08-30 The State of Food Insecurity in the World 2009 presents the latest statistics on global undernourishment and concludes that structural problems of underinvestment have impeded progress toward the World Food Summit goal and the first Millennium Development Goal hunger reduction target. This disappointing state of affairs has been exacerbated by first the food crisis and now the global economic crisis that, together, have increased the number of undernourished people in the world to more than one billion for the first time since 1970. This crisis is different from the crisis developing countries have experienced in the past, because it is affecting the entire world simultaneously and because developing countries today are more integrated into the global economy than in the past. In the context of the enormous financial pressures faced by governments, the twin-track approach remains an effective way to address growing levels of hunger in the world. Investments in the agriculture sector, especially for public goods, will be critical if hunger is to be eradicated. Also published in Chinese, English, French, Russian and Spanish.
