Mastenbjörk, 2021-02-07 Pharmacology doesn't have to be hard! Here's why: At Medical Creations, we are firm believers of the notion that the best way to learn a new topic is first to understand the fundamentals. Once you know the fundamentals, you will be able to understand the bigger picture. If you don't understand the bigger picture, forcing yourself to memorize any details becomes that much harder. Our Pharmacology book is meant to give you a good understanding of the topic before you can dive into the details with other, more extensive pharmacology books. The goal is to have you understand rather than memorize. It's a great alternative to the thicker and more expensive pharmacology books if you are studying for an exam and you just want a quick recap, or if you are just starting out and you want an overview. The purpose of this pharmacology book is to serve as a reference manual and

a comprehensive study guide for medical, nursing, and paramedic students. For easy understanding of this complex subject, the book has been divided into multiple units based on each body system. The addition of multiple-choice questions will make it easier for you to remember the information from previous chapters. The key therapeutic drug classes for each major system have been outlined in separate chapters. Bullet points and tables make the content easy to understand. Pharmacology is a constantly evolving field, and new drugs are being developed every day. The main aim of this book is to familiarize the reader with the different categories of drugs. The most commonly prescribed drugs are described here, but the book is by no means exhaustive and does not cover all the drugs available today. For detailed descriptions of the latest drugs on the market, and less commonly prescribed drugs, the reader is referred to one of the more exhaustive textbooks of pharmacology. This book will help you: * ..Have a clear understanding of pharmacology * ..Learn about different groups of drugs, the pharmacokinetics, and the pharmacodynamics * ..Find pharmacology much more bearable Go to the top-right of the page and click Add to Cart

ati pharm practice a: Communities of Practice Etienne Wenger, 1999-09-28 This book

presents a theory of learning that starts with the assumption that engagement in social practice is the fundamental process by which we get to know what we know and by which we become who we are. The primary unit of analysis of this process is neither the individual nor social institutions, but the informal 'communities of practice' that people form as they pursue shared enterprises over time. To give a social account of learning, the theory explores in a systematic way the intersection of issues of community, social practice, meaning, and identity. The result is a broad framework for thinking about learning as a process of social participation. This ambitious but thoroughly accessible framework has relevance for the practitioner as well as the theoretician, presented with all the breadth, depth, and rigor necessary to address such a complex and yet profoundly human topic.

ati pharm practice a: **Pain Management and the Opioid Epidemic** National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Health Sciences Policy, Committee on Pain Management and Regulatory Strategies to Address Prescription Opioid Abuse, 2017-09-28 Drug overdose, driven largely by overdose related to the use of opioids, is now the leading cause of unintentional injury death in the United States. The ongoing opioid crisis lies at the intersection of two public health challenges: reducing the burden of suffering from pain and containing the rising toll of the harms that can arise from the use of opioid medications. Chronic pain and opioid use disorder both represent complex human conditions affecting millions of Americans and causing untold disability and loss of function. In the context of the growing opioid problem, the U.S. Food and Drug Administration (FDA) launched an Opioids Action Plan in early 2016. As part of this plan, the FDA asked the National Academies of Sciences, Engineering, and Medicine to convene a committee to update the state of the science on pain research, care, and education and to identify actions the FDA and others can take to respond to the opioid epidemic, with a particular focus on informing FDA's development of a formal method for incorporating individual and societal considerations into its risk-benefit framework for opioid approval and monitoring.
