Abishkar Subedi, Nivaldo Peroni, Marja Thijssen, Elizabeth O'Keeffe, 2013-03-12 The conservation and sustainable use of biodiversity are issues that have been high on the policy agenda since the first Earth Summit in Rio in 1992. As part of efforts to implement in situ conservation, a methodology referred to as community biodiversity management (CBM) has been developed by those engaged in this arena. CBM contributes to the empowerment of farming communities to manage their biological resources and make informed decisions on the conservation and use of agrobiodiversity. This book is the first to set out a clear overview of CBM as a methodology for meeting socio-environmental changes. CBM is shown to be a key strategy that promotes community resilience, and contributes to the conservation of plant genetic resources. The authors present the underlying concepts and theories of CBM as well as its methodology and practices, and introduce case studies primarily from Brazil, Ethiopia, France, India, and Nepal. Contributors include farmers, leaders of farmers' organizations, professionals from conservation and development organizations, students and scientists. The book offers inspiration to all those involved in the conservation and use of agrobiodiversity within livelihood development and presents ideas for the implementation of farmers' rights. The wide collection of experiences illustrates the efforts made by communities throughout the world to cope with change while using diversity and engaging in learning processes. It links these grassroots efforts with debates in policy arenas as a means to respond to the unpredictable changes, such as climate change, that communities face in sustaining their livelihoods.

craftsman dls 3500 manual: Tm 9-785 High Speed Tractor M-4 Technical Manual War Department, 2011-09 Designed by Allis Chalmers on the chassis and drive train of the M2 Light Tank, the 18-ton M4 High Speed Tractor was a prime mover for the U.S. Army during World War II. It was tasked with moving artillery, in particular 3-inch and 90mm anti-aircraft guns, 155mm guns, and 8-inch and 240mm howitzers. Built as a crawler and equipped with a 6-cylinder, water-cooled engine, the M4 could travel cross-country through swamps and sand, or on the highway at speeds up to 33 mph. Over 5,500 M4s were built between 1942 and 1945, with many remaining in service into the 1960s. Created in 1943, this official TM 9-785 Technical Manual reveals a great deal about the M4's design and capabilities. Intended as a manual for those charged with operation and maintenance, this manual shows many aspects of its engine, cooling, power, drive train and other systems. Originally labeled restricted, this manual was declassified long ago and is here reprinted in book form. Care has been taken to preserve the integrity of the text.
