hunting the elements answers: *Hunting the Wren* Elizabeth Atwood Lawrence, 1997 A unique interdisciplinary study, this book examines the British and European tradition of the wren hunt, in which a bird ordinarily revered and protected for most of the year was killed around the time of the annual solstice. In focusing on this ancient ritual, Elizabeth Atwood Lawrence draws on her training in cultural anthropology and biology to cast a fresh light on the complexities of human-animal relationships. Following an introductory chapter on animal symbolism, Lawrence proceeds in subsequent chapters to describe the wren both as a biological entity and as the subject of numerous tales and legends, to delineate the details of the wren hunt ceremony and the various meanings ascribed to it, and, finally, to relate the ceremony to important contemporary issues in human-animal interactions and current attitudes toward the living environment. Whereas most other studies tend to concentrate solely on human perceptions of animals and fail to include the animal's role in the relationship, Lawrence's approach shows how the participation of both animal and human determines the symbolic status of the animal -- which in turn influences the treatment of that animal

within a particular society. At a time when human destructiveness toward nature has reached tragic proportions, Lawrence contends, it is critical that we understand the processes by which certain cultural beliefs, in combination with observations about the natural history of a particular animal, result in emotional and mental responses that may ultimately determine the fate of that species. The author argues persuasively that the wren hunt -- with its ancient roots, associated beliefs, and complex meanings in the preindustrialized world -- still has much to teach us.

hunting the elements answers: *Highlights of Spanish Astrophysics V* Jose M. Diego, Luis J. Goicoechea, J. Ignacio González-Serrano, Javier Gorgas, 2010-03-18 Astronomy is a scientific discipline that has developed a rapid and impressive growth in Spain. Thirty years ago, Spain occupied a purely anecdotal presence in the international context, but today it occupies the eighth position in the world in publication of astronomical articles, and, among other successes, owns and operates ninety per cent of the world's largest optical telescope GTC (Gran Telescopio Canarias). The Eighth Scientific Meeting of the Spanish Astronomical Society (Sociedad Española de Astronomía, SEA), held in Santander in July 7-11 2008, whose proceedings are in your hands, clearly shows the enthusiasm, motivation and quality of the present Spanish astronomical community. The event brought together 322 participants, who represent almost 50% of Spanish professional astronomers. This percentage, together with the continuously increasing, with respect to previous SEA meetings, number of oral presentations and poster contributions (179 and 127 respectively), confirms that the SEA conferences have become a point of reference to assess the interests and achievements of astrophysical research in Spain. The most important and current topics of modern Astrophysics were taken into account at the preliminary meeting, as well as the number and quality of participants and their contributions, to select the invited speakers and oral contributors. We took a week to enjoy the high quality contributions submitted by Spanish astronomers to the Scientific Organizing Committee. The selection was difficult. We wish to acknowledge the gentle advice and commitment of the SOC members.
