**interesting facts about the southeast region: Jewish Life in Southeast Europe** Kateřina Králová, Marija Vulesica, Giorgos Antoniou, 2020-05-21 This anthology brings together eight chapters which examine the life of Jews in Southeast Europe through political, social and cultural lenses. Even though the Holocaust put an end to many communities in the region, this book chronicles how some Holocaust survivors nevertheless tried to restore their previous lives. Focusing on the once flourishing and colorful Jewish communities throughout the Balkans - many of which were organized according to the Ottoman millet system - this book provides a diverse range of insights into Jewish life and Jewish-Gentile relations in what became Greece, Yugoslavia, Romania and Bulgaria after World War II. Further, the contributors conceptualize the issues in focus from a historical perspective. In these diachronic case studies, virtually the whole 20th century is covered, with a special focus paid to the shifting identities, the changing communities and the memory of the Holocaust, thereby providing a very useful parallel to today's post-war and divided societies. Drawing on relevant contemporary approaches in historical research, this book complements the field with topics that, until now in Jewish studies and beyond, remained on the edge of the general research focus. This book was originally published as a special issue of Southeast European and Black Sea Studies.

**interesting facts about the southeast region: A Brief History of Northern Kentucky** Robert D. Webster, 2019-09-03 Thousands of years ago, the land that would become Northern Kentucky emerged above sea level when a large portion of the continental plate bulged upward. Today, the region rests on the crest of that uplift, known as the Cincinnati Arch. And just like the fascinating geology of this region, Northern Kentucky continues to grow and develop. From the arrival of the Native Americans, to the first European settlers in the late 1700s, to the building of Ark Encounter at Williamstown in 2016, Northern Kentucky's landscape and population have changed dramatically. This encompassing study delves into the region's unique past and considers its ever-evolving future. Provided is a wide-ranging overview of Northern Kentucky's rich history, including details about its early pioneers such as James Taylor Jr., Simon Kenton, and Daniel Boone, who knew the potential of the incredibly beautiful territory they had discovered at the mouth of the Licking River. The collection also chronicles significant historic moments, like the Battle of Blue Licks, the building of the Roebling Bridge, and tragedies such as the Ohio River Flood of 1937 and the Beverly Hills Supper Club fire of 1977. Famous Northern Kentuckians, such as singer and actress Rosemary Clooney, artist Frank Duveneck, and performer Kenny Price, are also featured. This well-rounded study also addresses the revitalization of the region—including the recent multi-billion-dollar riverside developments in Covington, Newport, and Bellevue—and how Northern Kentucky has evolved into one of the most desirable places in the country.

**interesting facts about the southeast region: Regreening the Bare Hills** David Lamb, 2010-10-14 In *Regreening the Bare Hills: Tropical Forest Restoration in the Asia-Pacific Region*, David Lamb explores how reforestation might be carried out both to conserve biological diversity and to improve the livelihoods of the rural poor. While both issues have attracted considerable attention in recent years, this book takes a significant step, by integrating ecological and silvicultural knowledge within the context of the social and economic issues that can determine the success or failure of tropical forest landscape restoration. Describing new approaches to the reforestation of degraded lands in the Asia-Pacific tropics, the book reviews current approaches to reforestation throughout the region, paying particular attention to those which incorporate native species - including in multi-species plantations. It presents case studies from across the Asia-Pacific region and discusses how the silvicultural methods needed to manage these 'new' plantations will differ from conventional methods. It also explores how reforestation might be made more attractive to smallholders and how trade-offs between production and conservation are most easily made at a landscape scale. The book concludes with a discussion of how future forest restoration may be affected by some current ecological and socio-economic trends now underway. The book represents a valuable resource for reforestation managers and policy makers wishing to promote these new silvicultural approaches, as well as for conservationists, development experts and researchers with an interest in forest restoration. Combining a theoretical-research perspective with practical aspects of restoration, the book will be equally valuable to practitioners and academics, while the lessons drawn from these discussions will have relevance elsewhere throughout the tropics.
