Each chapter offers secrets and deep insights, drawing from the author's extensive experience in supervising LL.B dissertations and research papers, notably in Southern Africa and India. Though primarily targeting LL.B students, *Disserted* also serves as an essential companion and indispensable resource for supervisors, law professors, jurists, and anyone interested in unraveling the complexities of writing dissertations. hot topics what to expect: *Facts Still Can't Speak for Themselves* Eric Oliver, 2015-09-11 Today, most trial lawyers and consultants accept the fact that all legal decision makers decide cases by first making up their own version of the case story. Yet, few have yet to fully adjust their practices to meet the demands of that reality. *Facts Still Can't Speak for Themselves* offers specific methods for trial professionals to increase their reach into the full range of potential stories decision makers can construct (and will construct) during any single case, and then shows you how to refine those stories into the one most compelling presentation for any legal decision maker to judge, in any legal decision-making venue. What you'll find inside: * How the stories decision makers imagine affect verdicts as much as their backgrounds and beliefs or the attorney's presentation in court * Which focus group method reveals the real range of stories decision makers can build from your case * How to profitably apply focus group results in negotiations and mediation equally well as in trials * How to run voir dire like a focus group (and a focus group like voir dire) improving both in the process and how to avoid common misleading mistakes * How focus group deliberations are the least valuable part of the process * How asking focus group participants which side in a case they "like" could be a major mistake * Why you should think twice before ever again asking a "why" question or using the word "any" during voir dire or in focus groups * How to establish immediate rapport with decision makers and to manage how they build their perceptions of your client's case story in time to affect their final judgments In this new edition, Eric Oliver dives deeply into cutting-edge research in communication, human judgment, perception, and influence and breaks down the process of turning theoretical abstractions into effective persuasive practices that help legal decision makers hear and see the case story from your client's point of view. Each chapter is now supplemented with some of the most relevant developments in the science of decision making, as well as with the decade of additional experience Eric has acquired working with trial lawyers and their clients since the first edition was published in 2005.

hot topics what to expect: *Parenting Matters* National Academies of Sciences, Engineering, and Medicine, Division of Behavioral and Social Sciences and Education, Board on Children, Youth, and Families, Committee on Supporting the Parents of Young Children, 2016-11-21 Decades of research have demonstrated that the parent-child dyad and the environment of the family—which includes all primary caregivers—are at the foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.

hot topics what to expect: **Courtroom Testimony for Fingerprint Examiners** Hillary Moses Daluz, 2021-08-30 Fingerprint examiners today are expected to develop, research and defend the scientific basis of their conclusions. Recent emphasis placed on scientific rigor and transparency through documentation has created a culture shift in the field. Many examiners are baffled by the resulting cultural, procedural and scientific distinctions, often becoming overwhelmed when

required to testify as an expert witness to explain such concepts in the courtroom. Courtroom Testimony for Fingerprint Examiners addresses all aspects of courtroom testimony as the first book to focus solely on testifying on fingerprint evidence as a comparative science. The book is presented in two parts. Section I addresses general expert witnessing for forensic scientists. This serves as a primer for the novice or a review for experienced witnesses covering such topics as the structure of the criminal justice system and federal rules of evidence, the role of the expert witness, testimony as teaching, presenting challenging scientific concepts to the layperson, court preparation, the three phases of expert witness testimony and landmark court decisions that have shaped the modern landscape of forensic testimony. Section II focuses on specific issues affecting fingerprint examiners and how to field questions during both direct and cross-examination. While such hot button topics are absent from currently available texts, this section pays particular attention to these salient, emerging topics. This includes evidentiary challenges to fingerprint evidence, relevant publications such as the PCAST report, nomenclature and standards development, issues surrounding cognitive bias and subjectivity, probability models, error rates and cases of error and how to address issues of minimum point standards in both the empirical and holistic traditions. Both Section I and Section II provide examples and present innovations applicable to latent and tenprint examiners. Features include: Presents a history of fingerprint evidence and current best practices and limits on characterizing fingerprint evidence in court, including appropriate nomenclature Provides current guidelines and recommendations for standards and the courtroom Illustrates how experts can work with attorneys so that the testimony process educates and informs jurors and judges rather than perpetuating an adversarial dynamic Addresses important issues such as cognitive bias, subjectivity, error rates, probability models and ethics As a forensic training instructor for professionals – and previously as a college professor – author Hillary Moses Daluz has spent the past ten years teaching courtroom testimony courses to forensic scientists. Courtroom Testimony for Fingerprint Examiners offers an invaluable resource to forensic scientists, latent print examiners, tenprint examiners, lab personnel in related comparative fields, attorneys, investigative professionals and students enrolled in forensic science university programs.
