kristen archives astr: The Glass Universe Dava Sobel, 2016-12-06 From #1 New York Times bestselling author Dava Sobel, the inspiring (People), little-known true story of women's landmark contributions to astronomy A New York Times Book Review Notable Book of 2017 Named one of the best books of the year by NPR, The Economist, Smithsonian, Nature, and NPR's Science Friday Nominated for the PEN/E.O. Wilson Literary Science Writing Award A joy to read." —The Wall Street Journal In the mid-nineteenth century, the Harvard College Observatory began employing women as calculators, or "human computers," to interpret the observations their male counterparts made via telescope each night. At the outset this group included the wives, sisters, and daughters of the resident astronomers, but soon the female corps included graduates of the new women's colleges—Vassar, Wellesley, and Smith. As photography transformed the practice of astronomy, the ladies turned from computation to studying the stars captured nightly on glass photographic plates. The "glass universe" of half a million plates that Harvard amassed over the ensuing decades—through the generous support of Mrs. Anna Palmer Draper, the widow of a pioneer in stellar photography—enabled the women to make extraordinary discoveries that attracted worldwide acclaim. They helped discern what stars were made of, divided the stars into meaningful categories for further research, and found a way to measure distances across space by starlight. Their ranks included Williamina Fleming, a Scottish woman originally hired as a maid who went on to identify ten novae and more than three hundred variable stars; Annie Jump Cannon, who designed a stellar classification system that was adopted by astronomers the world over and is still in use; and Dr. Cecilia Helena Payne, who in 1956 became the first ever woman professor of astronomy at Harvard—and Harvard's first female department chair. Elegantly written and enriched by excerpts from letters, diaries, and memoirs, *The Glass Universe* is the hidden history of the women whose contributions to the burgeoning field of astronomy forever changed our understanding of the stars and our place in the universe.

kristen archives astr: Scared Selfless Michelle Stevens, PhD, 2018-03-27 "A riveting memoir that takes readers on a roller coaster ride from the depths of hell to triumphant success."—Dave Pelzer, author of *A Child Called "It"* Michelle Stevens has a photo of the exact moment her childhood was stolen from her: She's only eight years old, posing for her mother's boyfriend, Gary Lundquist—an elementary school teacher, neighborhood stalwart, and brutal pedophile. Later that night, Gary locks Michelle in a cage, tortures her repeatedly, and uses her to quench his voracious and deviant sexual whims. Little does she know that this will become her new reality for the next six years. Michelle can also pinpoint the moment she reconstituted the splintered pieces of her life: She's in cap and gown, receiving her PhD in psychology—and the university's award for best dissertation. The distance between these two points is the improbable journey from torture, loss, and mental illness to healing, recovery, and triumph that is Michelle's powerful memoir, *Scared Selfless*. Michelle suffered from post-traumatic stress disorder, anxiety, and depression, and made multiple suicide attempts. She also developed multiple personalities. There was "Chelsey," the rebellious teenager; "Viscous," a tween with homicidal rage; and "Sarah," a sweet little girl who brought her teddy bear on a first date. In this harrowing tale, Michelle, who was inspired to help others heal by becoming a psychotherapist, sheds light on the all-too-real threat of child sexual abuse, its subsequent psychological effects, and the best methods for victims to overcome their ordeals and, ultimately, thrive. *Scared Selfless* is both an examination of the extraordinary feats of the mind that are possible in the face of horrific trauma as well as Michelle's courageous testament to their power.

kristen archives astr: Disarmed Kristin Goss, 2010-12-16 More than any other advanced industrial democracy, the United States is besieged by firearms violence. Each year, some 30,000 people die by gunfire. Over the course of its history, the nation has witnessed the murders of

beloved public figures; massacres in workplaces and schools; and epidemics of gun violence that terrorize neighborhoods and claim tens of thousands of lives. Commanding majorities of Americans voice support for stricter controls on firearms. Yet they have never mounted a true national movement for gun control. Why? *Disarmed* unravels this paradox. Based on historical archives, interviews, and original survey evidence, Kristin Goss suggests that the gun control campaign has been stymied by a combination of factors, including the inability to secure patronage resources, the difficulties in articulating a message that would resonate with supporters, and strategic decisions made in the name of effective policy. The power of the so-called gun lobby has played an important role in hobbling the gun-control campaign, but that is not the entire story. Instead of pursuing a strategy of incremental change on the local and state levels, gun control advocates have sought national policies. Some 40% of state gun control laws predate the 1970s, and the gun lobby has systematically weakened even these longstanding restrictions. A compelling and engagingly written look at one of America's most divisive political issues, *Disarmed* illuminates the organizational, historical, and policy-related factors that constrain mass mobilization, and brings into sharp relief the agonizing dilemmas faced by advocates of gun control and other issues in the United States.

Aperture is pleased to present the upcoming publication and exhibition *The New York Times Magazine Photographs*, which reflects upon and interrogates the very nature of both photography and print magazines at this pivotal moment in their history and evolution. Edited by Kathy Ryan, long-time photo editor of the magazine, and with a preface by former editorial director Gerald Marzorati, this volume presents some of the finest commissioned photographs worldwide in four sections: reportage, portraiture, style, and conceptual photography, including photo illustration. Diverse in content and sensibility, and consistent in virtuosity, the photographs are accompanied by reproduced tear sheets to allow for the examination of sequencing and the interplay between text and image, simultaneously presenting the work while illuminating its distillation to magazine form. This process is explored further through texts offering behind-the-scenes perspective and anecdotes by the many photographers, writers, editors, and other collaborators whose voices have been a part of the magazine over the years. David Company contributes a critical essay that provides an in-depth history of the magazines relationship to photography, contextualizing its contributions within the larger world of magazine work. Also addressed are issues of documentary photography in relation to more conceptual photography; the efficacy of story-telling; and what makes an image evidentiary, objective, subjective, truthful, or a tool for advocacy; as well as thoughts on whether these matters are currently moot, or more critical than ever. As such, *The New York Times Magazine Photographs* aims to serve as a springboard for a rigorous, necessary, and revitalized examination of photography as presented within a modern journalistic context.

kristen archives astr: *Fire* Kristin Cashore, 2021-01-07 A must-read title for all fans of Patrick Rothfuss and Trudi Canavan, *Fire* will have you hooked on its gripping action, political intrigue, and beautiful central relationship. 'The book is REALLY good. Reading it made me very, very happy!' Tamora Pierce Set in a world of stunningly beautiful, exceptionally dangerous monsters, *Fire* is one of the most dangerous monsters of all - a human one. Marked out by her vivid red hair, she's more than attractive. *Fire* is mesmerising. But with this extraordinary beauty comes influence and power. People who are susceptible to her appeal will do anything for her attention, and for her affection. They will turn away from their families, their work, and their duties for her. They will forget their responsibilities to please her ... and worse, crush nations, neglect kingdoms and abuse their power. Aware of her power, and afraid of it, *Fire* lives in a corner of the world away from people, and away from temptation. Until the day comes when she is needed - a day when, for her king, she has to take a stand not only against his enemies, but also against herself ... Readers can't get enough of *Fire*: 'I was BLOWN AWAY! I fell in love with the world with the monsters and politics, the characters, the romance . . . Fantastic. kristen archives astr: *Pushing Ice* Alastair Reynolds, 2009-12-10 First contact with extraordinary aliens, glittering technologies that could destroy the universe in a nanosecond, huge sweeping space operas: Alastair Reynolds is back! Some centuries from now, the exploration and exploitation of the Solar System is in full swing. On the cold edge of the system, Bella Lind, captain of the huge commercial spacecraft Rockhopper IV, helps fuel this new gold rush by attaching mass-driver motors to organic-rich water-ice comets to move them back to the inner worlds. Her crew are tough, blue-collar miners, engineers and demolition experts. Around Saturn, something inexplicable happens: one of the moons leaves its orbit and accelerates out of the Solar System. The icy mantle peels away to reveal that it was never a moon in the first place, just a parked spacecraft, millions of years old, that has now decided to move on. Rockhopper IV, trapped in the pull, is hurled across time and space into the deep, distant future, arriving in a vast, alien-constructed chamber. And the crew are not alone, for each chamber contains an alien culture dragged into this cosmic

menagerie at the end of time. The crew of the Rockhopper IV know a lot about blowing up comets, but not much about first contact with ultra-advanced aliens. They have two things to worry about: can they (and their new alien allies) negotiate their way through each harrying contact? And can they assimilate the avalanche of knowledge about their own future - including all the glittering, dangerous technologies that are now theirs for the taking - without destroying themselves in the process?

kristen archives astr: Routledge International Handbook of Research Methods in Digital Humanities Kristen Schuster, Stuart Dunn, 2020-08-23 This book draws on both traditional and emerging fields of study to consider what a grounded definition of quantitative and qualitative research in the Digital Humanities (DH) might mean; which areas DH can fruitfully draw on in order to foster and develop that understanding; where we can see those methods applied; and what the future directions of research methods in Digital Humanities might look like. Schuster and Dunn map a wide-ranging DH research methodology by drawing on both 'traditional' fields of DH study such as text, historical sources, museums and manuscripts, and innovative areas in research production, such as knowledge and technology, digital culture and society and history of network technologies. Featuring global contributions from scholars in the United Kingdom, the United States, Europe and Australia, this book draws together a range of disciplinary perspectives to explore the exciting developments offered by this fast-evolving field. Routledge International Handbook of Research Methods in Digital Humanities is essential reading for anyone who teaches, researches or studies Digital Humanities or related subjects.

A gigantic fable of genuine truths. --Barbara Kingsolver, The New York Times Book Review The Overstory is a sweeping, impassioned work of activism and resistance that is also a stunning evocation of--and paean to--the natural world. From the roots to the crown and back to the seeds, Richard Powers's twelfth novel unfolds in concentric rings of interlocking fables that range from antebellum New York to the late twentieth-century Timber Wars of the Pacific Northwest and beyond. There is a world alongside ours--fast, slow, interconnected, resourceful, magnificently inventive, and almost invisible to us. This is the story of a handful of people who learn how to see that world and who are drawn up into its unfolding catastrophe.

kristen archives astr: New Worlds, New Horizons in Astronomy and Astrophysics National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, Board on Physics and Astronomy, Committee for a Decadal Survey of Astronomy and Astrophysics, 2011-02-04 Driven by discoveries, and enabled by leaps in technology and imagination, our understanding of the universe has changed dramatically during the course of the last few decades. The fields of astronomy and astrophysics are making new connections to physics, chemistry, biology, and computer science. Based on a broad and comprehensive survey of scientific opportunities, infrastructure, and organization in a national and international context, New Worlds, New Horizons in Astronomy and Astrophysics outlines a plan for ground- and space- based astronomy and astrophysics for the decade of the 2010's. Realizing these scientific opportunities is contingent upon

maintaining and strengthening the foundations of the research enterprise including technological development, theory, computation and data handling, laboratory experiments, and human resources. *New Worlds, New Horizons in Astronomy and Astrophysics* proposes enhancing innovative but moderate-cost programs in space and on the ground that will enable the community to respond rapidly and flexibly to new scientific discoveries. The book recommends beginning construction on survey telescopes in space and on the ground to investigate the nature of dark energy, as well as the next generation of large ground-based giant optical telescopes and a new class of space-based gravitational observatory to observe the merging of distant black holes and precisely test theories of gravity. *New Worlds, New Horizons in Astronomy and Astrophysics* recommends a balanced and executable program that will support research surrounding the most profound questions about the cosmos. The discoveries ahead will facilitate the search for habitable planets, shed light on dark energy and dark matter, and aid our understanding of the history of the universe and how the earliest stars and galaxies formed. The book is a useful resource for agencies supporting the field of astronomy and astrophysics, the Congressional committees with jurisdiction over those agencies, the scientific community, and the public.
