legal environment today online: The Environmental Rights Revolution David R. Boyd, 2011-11-29 The right to a healthy environment has been the subject of extensive philosophical debates that revolve around the question: Should rights to clean air, water, and soil be entrenched in law? David Boyd answers this by moving beyond theoretical debates to measure the practical effects of enshrining the right in constitutions. His pioneering analysis of 193 constitutions and the laws and court decisions of more than 100 nations in Europe, Latin America, Asia, and Africa reveals a positive correlation between constitutional protection and stronger environmental laws, smaller ecological footprints, superior environmental performance, and improved quality of life.

legal environment today online: *Law, Technology and Society* Roger Brownsword, 2019-02-18 This book considers the implications of the regulatory burden being borne increasingly by technological management rather than by rules of law. If crime is controlled, if human health and safety are secured, if the environment is protected, not by rules but by measures of technological management—designed into products, processes, places and so on—what should we make of this transformation? In an era of smart regulatory technologies, how should we understand the ‘regulatory environment’, and the ‘complexion’ of its regulatory signals? How does technological management sit with the Rule of Law and with the traditional ideals of legality, legal coherence, and respect for liberty, human rights and human dignity? What is the future for the rules of criminal law, torts and contract law—are they likely to be rendered redundant? How are human informational interests to be specified and protected? Can traditional rules of law survive not only the emergent use of technological management but also a risk management mentality that pervades the collective engagement with new technologies? Even if technological management is effective, is it acceptable? Are we ready for rule by technology? Undertaking a radical examination of the disruptive effects of technology on the law and the legal mind-set, Roger Brownsword calls for a triple act of re-imagination: first, re-imagining legal rules as one element of a larger regulatory environment of which technological management is also a part; secondly, re-imagining the Rule of Law as a constraint on the arbitrary exercise of power (whether exercised through rules or through technological measures); and, thirdly, re-imagining the future of traditional rules of criminal law, tort law, and contract law.

legal environment today online: *Environment and Public Health* I. Leslie Rubin, Joav Merrick, 2015 This book represents a body of work performed by students from a diverse set of disciplines and a variety of universities. Each project was developed by the students to break the cycle of social, economic and environmental health disparities. This book contains the projects from the ninth annual break the cycle program. Break the cycle projects are designed to raise awareness among the students of the reality of environmental health disparities and its impact on the world around them. Although the students may feel daunted by the magnitude of the challenge, they need to know that even the relatively small project they develop can make a big difference and becomes part of an inexorable process towards making the world a better place for all of its citizens. The dictum that It is not incumbent upon you to finish the task, yet, you are not free to desist from it empowers the students to take on a challenge for a lifetime and beyond. We believe that the lessons learned by the students from their own projects, from working with the other students and from appreciating the difference that each little effort can make, goes significantly towards cultivating

our future leaders. They are the people who will carry on the work and make the world a better place in their time.
