loma select test: Test Policy and the Politics of Opportunity Allocation: The Workplace and the Law Bernard R. Gifford, 2012-12-06 Bernard R. Gifford In the United States, the standardized test has become one of the major sources of information for reducing uncertainty in the determination of individual merit and in the allocation of merit-based educational, training, and employment opportunities. Most major institutions of higher education require applicants to supplement their records of academic achievements with scores on standardized tests. Similarly, in the workplace, as a condition of employment or assignment to training programs, more and more employers are requiring prospective employees to sit for standardized tests. In short, with increasing frequency and intensity, individual members of the political economy are required to transmit to the opportunity marketplace scores on standardized examinations that purport to be objective measures of their and potential. In many instances, these test scores are the abilities, talents, only signals about their skills that job applicants are permitted to send to prospective employers. THE NATIONAL COMMISSION ON TESTING AND PUBLIC POLICY In view of the importance of these issues to our current national agenda, it was proposed that the Human Rights and Governance and the Education and Culture Programs of the Ford Foundation support the establishment of a "blue ribbon National Commission on Testing and Public Policy to investigate some of the major problems as well as the untapped opportunities created by recent trends in the use of standardized tests, particularly in the workplace and in schools.

loma select test: Mathematical and Numerical Modeling in Porous Media Martin A. Diaz Viera, Pratap Sahay, Manuel Coronado, Arturo Ortiz Tapia, 2012-07-24 Porous media are broadly found in nature and their study is of high relevance in our present lives. In geosciences porous media research is fundamental in applications to aquifers, mineral mines, contaminant transport, soil remediation, waste storage, oil recovery and geothermal energy deposits. Despite their importance, there is as yet no complete understanding of the physical processes involved in fluid flow and transport. This fact can be attributed to the complexity of the phenomena which include multicomponent fluids, multiphasic flow and rock-fluid interactions. Since its formulation in 1856, Darcy's law has been generalized to describe multi-phase compressible fluid flow through anisotropic and heterogeneous porous and fractured rocks. Due to the scarcity of information, a high degree of uncertainty on the porous medium properties is commonly present. Contributions to the knowledge of modeling flow and transport, as well as to the characterization of porous media at field scale are of great relevance. This book addresses several of these issues, treated with a variety of methodologies grouped into four parts: I Fundamental concepts II Flow and transport III Statistical and stochastic characterization IV Waves The problems analyzed in this book cover diverse length scales that range from small rock samples to field-size porous formations. They belong to the most active areas of research in porous media with applications in geosciences developed by diverse authors. This book was written for a broad audience with a prior and basic knowledge of porous media. The book is addressed to a wide readership, and it will be useful not only as an authoritative textbook for undergraduate and graduate students but also as a reference source for professionals including geoscientists, hydrogeologists, geophysicists, engineers, applied mathematicians and others working on porous media.

loma select test: Think Like a Nurse Linda Caputi, 2022-02-05 Over 150 colleges and universities have adopted the first edition of Think Like a Nurse: A Handbook as a required student textbook. These adoptions demonstrate a need for this clinical judgment framework and have motivated the author, Dr. Linda Caputi, to expand the Caputi Method for Learning Clinical Judgment. The overwhelming support from educational institutions is evidence that students must learn a clinical judgment framework as the basis for thinking in nursing today. Older methods of evaluating student thinking that relied solely on students correctly answering questions with the assumption that if they answer correctly, they are able to use clinical judgment, is fatally flawed. Students must learn a framework that is used to focus their thinking, stay mindful, and guide them to make sound clinical decisions. Think Like a Nurse: A Handbook was initially introduced and used in the United States. Early in 2021 representatives from Georgian College's new Honours BScN program requested a Canadian version of the book. Lesley MacMaster of Georgian College adapted the book for nursing students across Canada. At the start of that work, Ms. MacMaster obtained reviews of the first edition. Two nurse leaders in Canada graciously agreed to review the book. Their comments provide further support for the Caputi method and for a Canadian version of Think Like a Nurse: The Caputi Method for Learning Clinical Judgment. With Think Like a Nurse: The Caputi Method for Learning Clinical Judgment, students in the United States and now in Canada are learning how to think like a nurse for the end goal of becoming a self-directed thinker who makes good decisions to improve patient outcomes. For more information, Linda's Nursing Education Blog, teaching tools, and complimentary webinars, please visit Dr. Caputi's website at: <https://LindaCaputi.com>

loma select test: The Opposite Field Jesse Katz, 2010-07-13 Here is one of the most remarkable, ambitious, and utterly original memoirs of this generation, a story of the losing and finding of self, of sex and love and fatherhood and the joy of language, of death and failure and heartbreak, of Los Angeles and Portland and Nicaragua and Mexico, and the shifting sands of place and meaning that can make up a culture, or a community, or a home. Faced with the collapse of his son's Little League program-consisting mostly of Latino kids in the largely Asian suburb of Monterey Park, California-Jesse Katz finds himself thrust into the role of baseball commissioner for La Loma Park. Under its lights the yearnings and conflicts of a complex immigrant community are played out amid surprising moments of grace. Each day-and night-becomes a test of Jesse's judgment and adaptability, and of his capacity to make this peculiar pocket of L.A.'s Eastside his home. While Jesse soothes egos, brokers disputes, chases down delinquent coaches and missing equipment, and applies popsicles to bruises, he forms unlikely alliances, commits unanticipated errors, and receives the gift of unexpected wisdom. But there's no less drama in Jesse's complicated personal life as he grapples with a stepson who seems destined for trouble, comforts his mother (a legendary Oregon politician) when she's stricken with cancer, and receives hard lessons in finding-and holding on to-the love of a good woman. Through it all, Jesse's emotional mainstay is his beloved son, Max, who quietly bests his father's brightest hopes. Over nine springs and summers with Max at La Loma, Jesse learns nothing less than what it takes to be a father, a son, a husband, a coach, and, ultimately, a man. This is an epic book, a funny book, a sexy book, a rapturously evocative and achingly poignant book. Above all it is true, in that it happened, but also in a way that transcends mere facts and cuts to the quick of what it means to be alive.

loma select test: *Testing at the Speed of Light* National Academies of Sciences, Engineering, and Medicine, Division on Engineering and Physical Sciences, National Materials and Manufacturing Board, Committee on Space Radiation Effects Testing Infrastructure for the U.S. Space Program, 2018-06-08 Spacecraft depend on electronic components that must perform reliably over missions measured in years and decades. Space radiation is a primary source of degradation, reliability issues, and potentially failure for these electronic components. Although simulation and modeling are valuable for understanding the radiation risk to microelectronics, there is no substitute for testing, and an increased use of commercial-off-the- shelf parts in spacecraft may actually increase requirements for testing, as opposed to simulation and modeling. *Testing at the Speed of Light* evaluates the nation's current capabilities and future needs for testing the effects of space radiation on microelectronics to ensure mission success and makes recommendations on how to provide effective stewardship of the necessary radiation test infrastructure for the foreseeable future.
