labcorp supply order form: Preventing HIV Transmission National Research Council and Institute of Medicine, Institute of Medicine, Panel on Needle Exchange and Bleach Distribution Programs, 1995-09-14 This volume addresses the interface of two major national problems: the

epidemic of HIV-AIDS and the widespread use of illegal injection drugs. Should communities have the option of giving drug users sterile needles or bleach for cleaning needs in order to reduce the spread of HIV? Does needle distribution worsen the drug problem, as opponents of such programs argue? Do they reduce the spread of other serious diseases, such as hepatitis? Do they result in more used needles being carelessly discarded in the community? The panel takes a critical look at the available data on needle exchange and bleach distribution programs, reaches conclusions about their efficacy, and offers concrete recommendations for public policy to reduce the spread of HIV/AIDS. The book includes current knowledge about the epidemiologies of HIV/AIDS and injection drug use; characteristics of needle exchange and bleach distribution programs and views on those programs from diverse community groups; and a discussion of laws designed to control possession of needles, their impact on needle sharing among injection drug users, and their implications for needle exchange programs.

labcorp supply order form: *Plague* Kent Heckenlively, Judy Mikovits, 2017-02-21 On July 22, 2009, a special meeting was held with twenty-four leading scientists at the National Institutes of Health to discuss early findings that a newly discovered retrovirus was linked to chronic fatigue syndrome (CFS), prostate cancer, lymphoma, and eventually neurodevelopmental disorders in children. When Dr. Judy Mikovits finished her presentation the room was silent for a moment, then one of the scientists said, "Oh my God!" The resulting investigation would be like no other in science. For Dr. Mikovits, a twenty-year veteran of the National Cancer Institute, this was the midpoint of a five-year journey that would start with the founding of the Whittemore-Peterson Institute for Neuro-Immune Disease at the University of Nevada, Reno, and end with her as a witness for the federal government against her former employer, Harvey Whittemore, for illegal campaign contributions to Senate Majority Leader Harry Reid. On this journey Dr. Mikovits would face the scientific prejudices against CFS, wander into the minefield that is autism, and through it all struggle to maintain her faith in God and the profession to which she had dedicated her life. This is a story for anybody interested in the peril and promise of science at the very highest levels in our country.

labcorp supply order form: *Managing Humanitarian Logistics* B.S. Sahay, Sumeet Gupta, Vinod Chandra Menon, 2015-09-10 This book discusses emerging themes in the area of humanitarian logistics. It examines how humanitarian logistics and supply chains play a key role,

focusing on rapidly delivering the correct amount of goods, people and monetary resources to the locations needed to achieve the success of relief efforts in response to global emergencies such as flood, earthquakes, wars etc. With an increase in the frequency, magnitude and impact of both natural and manmade disasters, effective delivery of humanitarian aid is an issue that is becoming increasingly important in the context of disaster management. The book focuses on how logistics systems and supply chains responsible for delivering this aid from origin to recipients can be made more effective and efficient. It also discusses how the development of information technology systems that can provide visibility to the disaster relief supply chain marks a huge step forward for the humanitarian sector as a whole. As more organizations begin to adopt and implement these systems and visibility is established, the use of key performance indicators will then become essential to further enhance the efficiency and effectiveness of these supply chains.

During the 1980s, Michael Milken at Drexel Burnham Lambert was the Billionaire Junk Bond King. He invented such things as "the highly confident letter" ("I'm highly confident that I can raise the money you need to buy company X") and the "blind pool" ("Here's a billion dollars: let us help

you buy a company”), and he financed the biggest corporate raiders—men like Carl Icahn and Ronald Perelman. And then, on September 7, 1988, things changed... The Securities and Exchange Commission charged Milken and Drexel Burnham Lambert with insider trading and stock fraud. Waiting in the wings was the US District Attorney, who wanted to file criminal and racketeering charges. What motivated Milken in his drive for power and money? Did Drexel Burnham Lambert condone the breaking of laws?
