

nursing diagnosis for homicidal ideation

nursing diagnosis for homicidal ideation is a critical aspect of psychiatric nursing that focuses on identifying, assessing, and managing individuals at risk of harming others. Nurses play a pivotal role in recognizing homicidal ideation, developing appropriate care plans, and implementing safety interventions. This article explores the essential elements of nursing diagnosis for homicidal ideation, including risk factors, assessment techniques, intervention strategies, and documentation requirements. Readers will gain a comprehensive understanding of how to address homicidal ideation in various clinical settings, the importance of multidisciplinary collaboration, and the legal and ethical considerations involved. By the end of this article, healthcare professionals will be better equipped to ensure patient and public safety while providing compassionate and effective care. Let's delve into the critical components of nursing diagnosis for homicidal ideation and how nurses can make a positive impact in this challenging area of mental health care.

- Understanding Homicidal Ideation in Nursing
- Key Components of Nursing Diagnosis for Homicidal Ideation
- Risk Factors Associated with Homicidal Ideation
- Assessment Strategies for Homicidal Ideation
- Effective Nursing Interventions
- Multidisciplinary Collaboration and Communication
- Documentation and Legal Considerations
- Promoting Safety and Recovery

Understanding Homicidal Ideation in Nursing

Homicidal ideation refers to thoughts or plans about causing harm or death to another person. In a nursing context, recognizing these ideations is crucial, as timely intervention can prevent harm and save lives. Nurses often encounter patients expressing aggressive behaviors or verbalizing threats, making it essential to differentiate between fleeting thoughts and serious intentions. The nursing diagnosis for homicidal ideation provides a structured approach for identifying individuals at risk and implementing necessary precautions. Understanding the underlying psychological, social, and medical factors contributing to homicidal ideation is fundamental for accurate assessment and intervention.

Key Components of Nursing Diagnosis for Homicidal

Ideation

The nursing diagnosis for homicidal ideation typically involves several core components. These include the identification of risk for other-directed violence, assessment of contributing factors, and formulation of nursing interventions aimed at reducing risk. Nursing diagnoses are guided by standardized language, such as those provided by NANDA International, to ensure clarity and consistency in care planning. The main objective is to address the potential for violence and develop individualized strategies to enhance safety for both the patient and others in the environment.

NANDA-I Diagnostic Statement

A commonly used NANDA-I diagnosis related to homicidal ideation is "Risk for Other-Directed Violence." This diagnosis is defined as an increased risk for behaviors in which an individual demonstrates that they can be physically, emotionally, or sexually harmful to others. The diagnostic statement is supported by signs, symptoms, and contributing factors observed during patient assessment.

Risk Factors Associated with Homicidal Ideation

Recognizing the risk factors for homicidal ideation is essential for early intervention. Certain personal, clinical, and environmental factors can increase the likelihood of an individual developing homicidal thoughts or behaviors. Nurses must be vigilant in identifying these risk factors to implement effective prevention and intervention strategies.

Common Risk Factors

- History of violence or aggression
- Substance abuse or withdrawal
- Severe mental illness (e.g., schizophrenia, bipolar disorder)
- Acute psychosis or delusional thinking
- Impulsive personality traits
- History of trauma or abuse
- Access to weapons
- Socioeconomic stressors or lack of support

Awareness of these risk factors enables nurses to prioritize patients who may require more intensive monitoring and intervention.

Assessment Strategies for Homicidal Ideation

A thorough assessment is the foundation for an accurate nursing diagnosis for homicidal ideation. Nurses use a combination of direct questioning, observation, and validated assessment tools to gather relevant information. Prompt identification of warning signs can prevent escalation and facilitate timely intervention.

Interview Techniques and Screening Tools

When assessing for homicidal ideation, nurses should use clear, direct questions in a nonjudgmental manner. Examples include: "Are you having thoughts about harming someone else?" or "Do you have a plan to hurt another person?" Standardized tools such as the Brief Psychiatric Rating Scale (BPRS) or the HCR-20 Violence Risk Assessment may also be utilized to assess risk and guide clinical decision-making.

Warning Signs and Behavioral Cues

Certain behaviors may indicate increased risk, such as agitation, verbal threats, physical aggression, or fascination with weapons. Changes in mood, withdrawal from social interactions, and sudden outbursts should be carefully documented and communicated to the healthcare team.

Effective Nursing Interventions

Once a nursing diagnosis for homicidal ideation is established, prompt intervention is critical to protect the safety of the patient, staff, and others. Interventions should be individualized based on the patient's risk level, mental status, and environmental factors.

Immediate Safety Measures

- Ensuring a safe environment by removing potential weapons
- Establishing close observation or one-to-one supervision if needed
- Utilizing de-escalation techniques to reduce agitation
- Implementing crisis intervention protocols when necessary

These measures help prevent violent incidents while allowing for further assessment and treatment.

Long-Term Interventions

Long-term strategies may include psychiatric evaluation, medication management, counseling, anger management programs, and involvement of family or support systems. Teaching coping skills and problem-solving techniques empowers patients to manage their emotions and reduce the risk of future violence.

Multidisciplinary Collaboration and Communication

Collaboration with other healthcare professionals is vital in managing patients with homicidal ideation. Nurses must communicate effectively with psychiatrists, psychologists, social workers, and security personnel to coordinate care and maintain safety. Regular team meetings, case conferences, and handoff reports ensure that all team members are aware of the patient's status and intervention plan.

Role of the Multidisciplinary Team

- Psychoeducation for the patient and family
- Coordinated crisis intervention and safety planning
- Ongoing risk assessment and monitoring
- Legal consultation when necessary

This collaborative approach optimizes outcomes and supports the patient's recovery process.

Documentation and Legal Considerations

Accurate documentation is a legal and ethical responsibility in the nursing diagnosis for homicidal ideation. Detailed records of assessments, interventions, patient responses, and communication with the healthcare team are essential. Documentation should include the patient's statements, observed behaviors, risk assessment findings, and all actions taken to ensure safety.

Legal and Ethical Responsibilities

Nurses must be aware of mandatory reporting laws and institutional policies related to threats of violence. Failure to document or report homicidal ideation can have serious legal consequences. Ethical principles, such as confidentiality and duty to warn, must be balanced to protect both the patient and potential victims.

Promoting Safety and Recovery

The ultimate goal of nursing intervention for homicidal ideation is to ensure the safety of all individuals while supporting the patient's mental health recovery. By fostering a therapeutic nurse-patient relationship, providing education, and involving support systems, nurses can help patients develop healthier coping mechanisms and reduce the potential for future violence.

Prevention and Education

- Educating patients and families about warning signs and when to seek help
- Encouraging adherence to treatment plans and follow-up care
- Promoting nonviolent communication and conflict resolution skills

Ongoing support and education are essential to maintaining safety and promoting lasting recovery.

Q: What is the primary nursing diagnosis for homicidal ideation?

A: The primary nursing diagnosis for homicidal ideation is "Risk for Other-Directed Violence," which addresses the potential for an individual to cause harm to others.

Q: What are common warning signs of homicidal ideation in patients?

A: Common warning signs include verbal threats, aggressive behavior, fascination with weapons, sudden mood changes, and withdrawal from social interactions.

Q: Which assessment tools are useful for evaluating homicidal ideation?

A: Tools such as the Brief Psychiatric Rating Scale (BPRS) and the HCR-20 Violence Risk Assessment are commonly used to evaluate risk and guide clinical decisions.

Q: What immediate nursing interventions should be implemented for homicidal ideation?

A: Immediate interventions include removing access to weapons, close observation, de-escalation techniques, and crisis intervention protocols.

Q: How can nurses collaborate with other professionals in managing homicidal ideation?

A: Nurses work with psychiatrists, psychologists, social workers, and security staff through regular communication, case conferencing, and coordinated care plans.

Q: What legal considerations must nurses follow when dealing with homicidal ideation?

A: Nurses must adhere to mandatory reporting laws, document all assessments and interventions, and balance confidentiality with the duty to warn potential victims.

Q: What are key risk factors for homicidal ideation?

A: Key risk factors include a history of violence, substance abuse, severe mental illness, trauma, impulsivity, and access to weapons.

Q: How can education help prevent homicidal behavior in at-risk patients?

A: Education provides patients and families with knowledge about warning signs, effective coping strategies, and when to seek professional help, reducing the risk of violence.

Q: Why is documentation important in cases of homicidal ideation?

A: Documentation ensures legal protection, supports continuity of care, and provides a record of the nurse's actions and patient responses.

Q: What long-term strategies support recovery in patients with homicidal ideation?

A: Long-term strategies include medication management, counseling, anger management programs, involvement of support systems, and ongoing risk monitoring.

Nursing Diagnosis for Homicidal Ideation: A Comprehensive Guide

The chilling thought of a patient harboring homicidal ideation sends shivers down the spine of even the most seasoned healthcare professional. Understanding and addressing this serious mental health concern requires a nuanced approach, starting with accurate nursing diagnoses. This comprehensive guide delves into the complexities of identifying, diagnosing, and managing homicidal ideation, providing nurses with the knowledge and tools necessary to ensure patient safety and effective treatment. We will explore the key nursing diagnoses associated with homicidal ideation, offering practical examples and strategies for intervention.

Understanding Homicidal Ideation:

Before diving into the specific nursing diagnoses, it's crucial to understand what homicidal ideation actually encompasses. It refers to thoughts of harming or killing another person. These thoughts can range from fleeting and vague to persistent and highly detailed plans. The intensity, frequency, and context of these thoughts are vital in determining the level of risk and guiding appropriate interventions. Factors contributing to homicidal ideation can be diverse and complex, including underlying mental illnesses (such as schizophrenia, bipolar disorder, or severe depression), substance abuse, traumatic brain injury, and significant psychosocial stressors.

Key Nursing Diagnoses for Homicidal Ideation:

Several nursing diagnoses can be relevant to a patient experiencing homicidal ideation, depending on the individual's specific presentation and circumstances. The choice of diagnosis directly informs the nursing interventions and treatment plan. Here are some of the most commonly used:

1. Risk for Other-Directed Violence

This is arguably the most common and crucial diagnosis when dealing with homicidal ideation. It focuses on the potential for the patient to act on their violent thoughts and harm others. The defining characteristics might include verbal threats, aggressive behavior, history of violence, access to weapons, and expressions of intense anger or frustration.

Assessment Considerations:

Detailed assessment of the patient's thoughts, feelings, and plans regarding harming others.

Exploration of any triggers that escalate their violent tendencies.

Assessment of the patient's access to weapons and potential means to harm others.

Evaluation of the patient's support system and their ability to cope with stress.

Interventions:

Close monitoring of the patient's behavior and verbalizations.

Implementation of safety protocols, including removal of potentially harmful objects.

Development of a safety plan with the patient, involving strategies for managing anger and urges to harm others.

Collaboration with the interdisciplinary team (psychiatrists, social workers, etc.) for appropriate interventions.

2. Ineffective Coping

Patients with homicidal ideation often struggle to cope with underlying stressors and intense emotions. This diagnosis highlights the patient's inability to manage their feelings in a healthy and constructive way, contributing to their violent thoughts.

Assessment Considerations:

Identification of the patient's coping mechanisms and their effectiveness.

Assessment of the patient's stress level and ability to manage emotions.

Exploration of the patient's history of trauma or adversity.

Interventions:

Teaching the patient healthy coping strategies, such as relaxation techniques, stress management skills, and problem-solving skills.

Providing support and encouragement for the patient to engage in therapeutic activities.

Referral to appropriate mental health services, including individual or group therapy.

3. Disturbed Thought Processes

This diagnosis addresses the cognitive distortions and delusional thinking that may underlie homicidal ideation, particularly in patients with psychotic disorders.

Assessment Considerations:

Assessment of the patient's thought content, including the presence of delusions, hallucinations, or disorganized thinking.

Evaluation of the patient's insight into their illness and the reality of their thoughts.

Interventions:

Administration of prescribed psychotropic medications as directed.

Cognitive behavioral therapy (CBT) to help the patient challenge and modify distorted thoughts.

Close monitoring for changes in the patient's mental status.

Planning and Implementation:

Developing a comprehensive care plan is crucial. This plan should detail specific interventions based on the chosen nursing diagnoses, including close observation, environmental modifications, medication management, and psychotherapeutic interventions. Regular reassessment is essential to track the patient's progress and adjust the plan as needed. Collaboration with the interdisciplinary team is key to ensuring a coordinated and effective approach.

Conclusion:

Nursing diagnosis for homicidal ideation requires a multifaceted and vigilant approach. By accurately identifying relevant diagnoses and implementing appropriate interventions, nurses play a pivotal role in ensuring patient safety and promoting positive outcomes. The information in this guide serves as a starting point; individual patient needs will always dictate the most appropriate nursing actions. Remember, patient safety is paramount, and seeking immediate assistance from the interdisciplinary team is crucial when homicidal ideation is present.

FAQs:

1. What if a patient only expresses passive homicidal ideation? Passive homicidal ideation, while less immediate, still requires assessment and intervention. The focus shifts to understanding the underlying reasons and implementing strategies to address those issues.

2. How do I document homicidal ideation? Documentation must be precise, objective, and detailed. Include verbatim statements, any triggers, the patient's emotional state, and all implemented interventions.

3. What is the role of medication in managing homicidal ideation? Medication, often antipsychotics or mood stabilizers, can significantly reduce the intensity of violent thoughts and improve overall mental health.

4. What is a safety plan, and how does it work? A safety plan is a collaborative document outlining strategies for managing triggers, coping with urges, and accessing support when needed.

5. When should I alert the healthcare team about a patient's homicidal ideation? Alert the healthcare team immediately upon any expression of homicidal ideation, regardless of how vague or serious it seems. Early intervention is critical.

nursing diagnosis for homicidal ideation: *Lippincott's Manual of Psychiatric Nursing Care Plans* Judith M. Schultz, Sheila L. Videbeck, 2009 Accompanying CD-ROM has nursing care plans, a customizable psychosocial assessment tool, and monographs about psychotropic drugs.

nursing diagnosis for homicidal ideation: Nursing Diagnosis Reference Manual Sheila Sparks Ralph, Cynthia M. Taylor, 2005 Nursing Diagnosis Reference Manual, Sixth Edition helps nursing students and practicing nurses prepare care plans accurately and efficiently for every NANDA-approved nursing diagnosis. The book features a life-cycle format, with sections on adult, adolescent, child, maternal-neonatal, and geriatric health. Sections on community-based health (care plans on home health, health promotion, and more) and psychiatric/mental health round out the volume. Each care plan includes clear-cut criteria for identifying the right nursing diagnosis, assessment guidelines, outcome statements, rationales with all interventions, and documentation guidelines.

nursing diagnosis for homicidal ideation: Sparks & Taylor's Nursing Diagnosis Pocket Guide Linda Phelps, 2019-12-30 This concise, easy-to-read pocket guide puts everything students need to formulate nursing diagnoses and construct care plans right at their fingertips. Incorporating the latest NANDA-I Nursing Diagnoses, this updated edition integrates the nursing process throughout and fits in a pocket for fast, efficient use in any clinical, classroom or simulation setting. A consistent, full-color design makes accessing information and designing care plans quick and easy, and up-to-date, evidence-based coverage helps students craft plans that meet patients' healthcare needs. UPDATED! 2018-2020 NANDA-I diagnosis and standards, Nursing Interventions Classification (NIC) and Nursing Outcomes Classification (NOC) labels incorporated throughout ensure clinical confidence and the most effective care plans. NEW! 17 new diagnoses keep students up to date with the latest clinical approaches in nursing practice. UPDATED! Alphabetical diagnoses organization makes it easier than ever to find the information students need in an instant. Compact, portable format puts essential information within students' grasp in any clinical setting. Color-coded care plans help students quickly navigate the full spectrum of nursing care. A unique assessment framework simplifies the writing of care plans with a comprehensive, easy-to-use template. Three Appendices — Assessment Parameters, Taxonomy of Nursing Practice and Action Intervention Types — make frequently referenced information instantly available.

nursing diagnosis for homicidal ideation: Nursing Diagnosis Manual Marilyn E. Doenges, Mary Frances Moorhouse, Alice C. Murr, 2022-02-01 Identify interventions to plan, individualize, and document care. Updated with the latest diagnoses and interventions from NANDA-I 2021-2023, here's the resource you'll turn to again and again to select the appropriate diagnosis and to plan, individualize, and document care for more than 800 diseases and disorders. Only in the Nursing Diagnosis Manual will you find for each diagnosis...defining characteristics presented subjectively and objectively - sample clinical applications to ensure you have selected the appropriate diagnoses - prioritized action/interventions with rationales - a documentation section,

and much more!

nursing diagnosis for homicidal ideation: Nursing Interventions Classification (NIC)

Gloria M. Bulechek, PhD, RN, FAAN, Howard K. Butcher, Joanne M. McCloskey Dochterman, PhD, RN, FAAN, Cheryl Wagner, 2012-11-01 Covering the full range of nursing interventions, Nursing Interventions Classification (NIC), 6th Edition provides a research-based clinical tool to help in selecting appropriate interventions. It standardizes and defines the knowledge base for nursing practice while effectively communicating the nature of nursing. More than 550 nursing interventions are provided - including 23 NEW labels. As the only comprehensive taxonomy of nursing-sensitive interventions available, this book is ideal for practicing nurses, nursing students, nursing administrators, and faculty seeking to enhance nursing curricula and improve nursing care. More than 550 research-based nursing intervention labels with nearly 13,000 specific activities Definition, list of activities, publication facts line, and background readings provided for each intervention. NIC Interventions Linked to 2012-2014 NANDA-I Diagnoses promotes clinical decision-making. New! Two-color design provides easy readability. 554 research-based nursing intervention labels with nearly 13,000 specific activities. NEW! 23 additional interventions include: Central Venous Access Device Management, Commendation, Healing Touch, Dementia Management: Wandering, Life Skills Enhancement, Diet Staging: Weight Loss Surgery, Stem Cell Infusion and many more. NEW! 133 revised interventions are provided for 49 specialties, including five new specialty core interventions. NEW! Updated list of estimated time and educational level has been expanded to cover every intervention included in the text.

nursing diagnosis for homicidal ideation: Mosby's Guide to Nursing Diagnosis Gail B.

Ladwig, Betty J. Ackley, 2011-01-01 This pocket-sized reference is ideal for use in clinicals, in class and at the bedside! A condensed version of the Nursing Diagnosis Handbook, 10th Edition, Mosby's Guide to Nursing Diagnosis, 4th edition uses a quick-access format to help you diagnose and formulate care plans with confidence and ease. It includes the most recent NANDA-I approved nursing diagnoses based on more than 1,300 specific symptoms and a step-by-step guide to creating care plans featuring desired outcomes, interventions, and patient teaching. UNIQUE! Care plans for every NANDA-I approved nursing diagnosis, including pediatric, geriatric, multicultural, home care, client/family teaching and discharge planning, and safety interventions Alphabetical thumb tabs provide quick access to specific symptoms and nursing diagnoses Pocketsize portability makes this book easy to carry and use in clinicals, in class, or at the bedside NEW! 4 Color Text NEW! Updated 2012-2014 NANDA-I-approved nursing diagnoses NEW! 16 new and 22 revised diagnoses NEW! Added content on safety, one of QSEN's six competencies

nursing diagnosis for homicidal ideation: Sparks and Taylor's Nursing Diagnosis Pocket

Guide Sheila S. Ralph, Cynthia M. Taylor, 2013-03-07 This is a pocket-sized companion to Sparks and Taylor's Nursing Diagnosis Reference Manual, 9e. This book offers a quick guide to authoritative plans of care for the most up-to-date 2012-2014 NANDA International (NANDA-I) approved nursing diagnoses. A unique assessment framework and a consistent full color design and layout make the process of finding and using diagnoses quick and effective. See links between NANDA-I and the Nursing Interventions Classification (NIC) and Nursing Outcomes Classification(NOC) labels, and learn how these all fit together to provide patients with a global aspect of care. This book will be useful across nursing disciplines, throughout the student curriculum, and as a clinical nurse.

nursing diagnosis for homicidal ideation: Nursing Concept Care Maps for Safe Patient Care

Ruth Wittman-Price, Brenda Reap Thompson, Suzanne M Sutton, 2012-10-11 Nursing Concept Care Maps for Providing Safe Patient Care presents 200 sample care maps covering the diseases and disorders you'll encounter most often in clinical practice. They'll also help you develop the critical-thinking skills you need to plan safe and effective nursing care.

nursing diagnosis for homicidal ideation: Fundamentals of Psychiatric Treatment Planning

James A. Kennedy, 2008-05-20 First published in 1992, Fundamentals of Psychiatric Treatment

Planning outlines an approach that quickly became the definitive standard for writing treatment plans. Developed by clinical psychiatrist James A. Kennedy, this practical, intuitive method organizes psychiatric problems into seven categories: psychological impairment, social skills, violence, activities of daily living, substance abuse, medical impairment, and ancillary impairment. Treatment plans are developed using information gathered with the Kennedy Axis V, an instrument that has proven more successful than both the Global Assessment of Functioning (GAF) scale and the Brief Psychiatric Rating Scale (BPRS) in establishing baselines and determining outcome measures. Fundamentals of Psychiatric Treatment Planning serves as a powerful, highly effective tool that Promotes a cohesive approach. By using a consistent approach to planning, the clinical team works in concert toward uniform goals and outcomes. Helps staff gather critical information to improve outcomes. For establishing baselines and determining outcome measures, the Kennedy Axis V instrument has proven more successful than both the GAF and the BPRS. Includes many examples to help staff write their own plans. Rich with real-life examples to guide staff, including problem names and descriptions, treatment modalities, and samples of individual plans for each of the seven problem categories. In addition to the Kennedy Axis V questionnaire, Fundamentals of Psychiatric Treatment Planning includes blank forms for treatment planning and tabbed sections to allow for quick reference. New features in the second edition include the integration of nursing care plans into master treatment plans, new systematic steps for building goals and modalities, refinements to the questionnaire, and the introduction of online support via the author's website. With its readily adaptable, uniform approach to a complex subject, Fundamentals of Psychiatric Treatment Planning, Second Edition, is a powerful, highly effective planning tool for all members of the clinical staff.

nursing diagnosis for homicidal ideation: Nursing Care Plans Meg Gulanick, Judith L. Myers, 2011-01-01 The bestselling nursing care planning book on the market, Nursing Care Plans: Diagnoses, Interventions, and Outcomes, 8th Edition covers the most common medical-surgical nursing diagnoses and clinical problems seen in adults. It includes 217 care plans, each reflecting the latest evidence and best practice guidelines. NEW to this edition are 13 new care plans and two new chapters including care plans that address health promotion and risk factor management along with basic nursing concepts that apply to multiple body systems. Written by expert nursing educators Meg Gulanick and Judith Myers, this reference functions as two books in one, with 147 disorder-specific and health management nursing care plans and 70 nursing diagnosis care plans to use as starting points in creating individualized care plans. 217 care plans --- more than in any other nursing care planning book. 70 nursing diagnosis care plans include the most common/important NANDA-I nursing diagnoses, providing the building blocks for you to create your own individualized care plans for your own patients. 147 disorders and health promotion care plans cover virtually every common medical-surgical condition, organized by body system. Prioritized care planning guidance organizes care plans from actual to risk diagnoses, from general to specific interventions, and from independent to collaborative interventions. Nursing diagnosis care plans format includes a definition and explanation of the diagnosis, related factors, defining characteristics, expected outcomes, related NOC outcomes and NIC interventions, ongoing assessment, therapeutic interventions, and education/continuity of care. Disorders care plans format includes synonyms for the disorder (for easier cross referencing), an explanation of the diagnosis, common related factors, defining characteristics, expected outcomes, NOC outcomes and NIC interventions, ongoing assessment, and therapeutic interventions. Icons differentiate independent and collaborative nursing interventions. Student resources on the Evolve companion website include 36 of the book's care plans - 5 nursing diagnosis care plans and 31 disorders care plans. Three NEW nursing diagnosis care plans include Risk for Electrolyte Imbalance, Risk for Unstable Blood Glucose Level, and Risk for Bleeding. Six NEW health promotion/risk factor management care plans include Readiness for Engaging in a Regular Physical Activity Program, Readiness for Enhanced Nutrition, Readiness for Enhanced Sleep, Readiness for Smoking Cessation, Readiness for Managing Stress, and Readiness for Weight Management. Four NEW disorders care plans include Surgical Experience: Preoperative

and Postoperative Care, Atrial Fibrillation, Bariatric Surgery, and Gastroenteritis. NEW Health Promotion and Risk Factor Management Care Plans chapter emphasizes the importance of preventive care and teaching for self-management. NEW Basic Nursing Concepts Care Plans chapter focuses on concepts that apply to disorders found in multiple body systems. UPDATED care plans ensure consistency with the latest U.S. National Patient Safety Goals and other evidence-based national treatment guidelines. The latest NANDA-I taxonomy keeps you current with 2012-2014 NANDA-I nursing diagnoses, related factors, and defining characteristics. Enhanced rationales include explanations for nursing interventions to help you better understand what the nurse does and why.

nursing diagnosis for homicidal ideation: Psychiatric Nursing Care Plans - E-Book

Katherine M. Fortinash, Patricia A. Holoday Worret, 2006-05-16 - New care plans, many that focus on the family, join completely updated and revised care plans to make this text the most comprehensive psychiatric nursing care planning text available. - Dynamic internal design emphasizes the care plans as the focus of the text; tabbed pages noting the relevant disorder and a complete list of care plans with page number references make finding a specific care plan easier than ever before. - Appropriate Nursing Interventions Classification (NIC) and Nursing Outcomes Classification (NOC) labels are presented with each care plan in order that students become familiar with these emerging classifications and practicing nurses can easily identify them for use in their care setting if applicable. - A comprehensive pharmacotherapy appendix includes the most recent psychotropic drug information and appropriate related client care. - Online Resources for the nurse, client, and family conclude each chapter.

nursing diagnosis for homicidal ideation: Nursing Diagnosis Reference Manual Linda

Phelps, 2022-05-09 Boost students' clinical confidence and practice readiness with the latest evidence-based information for nursing diagnoses. Nursing Diagnosis Reference Manual, 12th Edition, provides fast, efficient access to clearly written, comprehensive coverage of the 2021-2023 NANDA-I definitions and classifications to help students meet the evolving healthcare needs of today's patients. Approachable monographs—thoroughly updated and alphabetized for quick, easy reference—reflect the nursing process and the expertise of leading nursing clinicians, educators, and researchers to equip students for clinical success in any setting.

nursing diagnosis for homicidal ideation: *Nursing Diagnosis Handbook - E-Book* Betty J.

Ackley, Gail B. Ladwig, 2010-02-18 Use this convenient resource to formulate nursing diagnoses and create individualized care plans! Updated with the most recent NANDA-I approved nursing diagnoses, Nursing Diagnosis Handbook: An Evidence-Based Guide to Planning Care, 9th Edition shows you how to build customized care plans using a three-step process: assess, diagnose, and plan care. It includes suggested nursing diagnoses for over 1,300 client symptoms, medical and psychiatric diagnoses, diagnostic procedures, surgical interventions, and clinical states. Authors Elizabeth Ackley and Gail Ladwig use Nursing Outcomes Classification (NOC) and Nursing Interventions Classification (NIC) information to guide you in creating care plans that include desired outcomes, interventions, patient teaching, and evidence-based rationales. Promotes evidence-based interventions and rationales by including recent or classic research that supports the use of each intervention. Unique! Provides care plans for every NANDA-I approved nursing diagnosis. Includes step-by-step instructions on how to use the Guide to Nursing Diagnoses and Guide to Planning Care sections to create a unique, individualized plan of care. Includes pediatric, geriatric, multicultural, and home care interventions as necessary for plans of care. Includes examples of and suggested NIC interventions and NOC outcomes in each care plan. Allows quick access to specific symptoms and nursing diagnoses with alphabetical thumb tabs. Unique! Includes a Care Plan Constructor on the companion Evolve website for hands-on practice in creating customized plans of care. Includes the new 2009-2011 NANDA-I approved nursing diagnoses including 21 new and 8 revised diagnoses. Illustrates the Problem-Etiology-Symptom format with an easy-to-follow, colored-coded box to help you in formulating diagnostic statements. Explains the

difference between the three types of nursing diagnoses. Expands information explaining the difference between actual and potential problems in performing an assessment. Adds detailed information on the multidisciplinary and collaborative aspect of nursing and how it affects care planning. Shows how care planning is used in everyday nursing practice to provide effective nursing care.

nursing diagnosis for homicidal ideation: *Nursing Diagnosis* Lynda Juall Carpenito, 1989 This resource offers definitive guidance on key elements of nursing diagnosis, its role in the nursing process, and its application to clinical practice.

nursing diagnosis for homicidal ideation: *Handbook of Nursing Diagnosis* Lynda Juall Carpenito, 2021-12-10 This handbook offers practical guidance on nursing diagnoses and associated care. It is a quick-reference type scope of content, easy for students to use while in clinical, in the classroom or simulation lab. It provides a condensed, organized outline of clinical nursing practice designed to communicate creative clinical nursing. It is not meant to replace nursing textbooks, but rather to provide nurses who work in a variety of settings with the information they need without requiring a time-consuming review of the literature. It will assist students in transferring their theoretical knowledge to clinical practice--

nursing diagnosis for homicidal ideation: *Psychiatric-mental Health Nursing* Sheila L. Videbeck, 2010-02 This fully updated Fifth Edition explores the full psychiatric nursing curriculum, from theoretical foundations to application of interventions for commonly encountered disorders. The focus is on treatment modalities, nursing care, therapeutic communication, and self-awareness. The built-in study guide helps reinforce student learning and knowledge retention. Abundant features highlight the most pertinent learning concepts.

nursing diagnosis for homicidal ideation: Nursing Diagnosis Handbook Betty J. Ackley, Gail B. Ladwig, 2004 This convenient reference is designed to help practicing nurses and nursing students make a nursing diagnosis and write a care plan with ease and confidence. An excellent teaching and learning tool, this handbook helps nurses correlate nursing diagnoses with known information about clients on the basis of assessment findings, established medical or psychiatric diagnoses, and the current treatment plan. This extensively revised and updated edition presents the most up-to-date information on all NANDA-approved nursing diagnoses. Further integration of both the NIC and NOC taxonomies, evidence-based nursing interventions, home care, client/family teaching, and multicultural and geriatric considerations enhance the book's relevance to today's nursing students and practitioners. Provides care plans for every NANDA-approved nursing diagnosis. Allows quick access to information with alphabetical organization of Sections II and III. Includes more geriatric, multicultural, and home care interventions as necessary for plans of care. Includes examples of and suggested NIC and NOC interventions and outcomes in each care plan. Provides care plans for every NANDA-approved nursing diagnosis Allows quick access to information with alphabetical organization of Sections II and III Includes more geriatric, multicultural, and home care interventions as necessary for plans of care Includes examples of and suggested NIC and NOC interventions and outcomes in each care plan

nursing diagnosis for homicidal ideation: *The Neurobiological Basis of Suicide* Yogesh Dwivedi, 2012-06-25 With recent studies using genetic, epigenetic, and other molecular and neurochemical approaches, a new era has begun in understanding pathophysiology of suicide. Emerging evidence suggests that neurobiological factors are not only critical in providing potential risk factors but also provide a promising approach to develop more effective treatment and prevention strategies. The Neurobiological Basis of Suicide discusses the most recent findings in suicide neurobiology. Psychological, psychosocial, and cultural factors are important in determining the risk factors for suicide; however, they offer weak prediction and can be of little clinical use. Interestingly, cognitive characteristics are different among depressed suicidal and depressed nonsuicidal subjects, and could be involved in the development of suicidal behavior. The characterization of the neurobiological basis of suicide is in delineating the risk factors associated

with suicide. The Neurobiological Basis of Suicide focuses on how and why these neurobiological factors are crucial in the pathogenic mechanisms of suicidal behavior and how these findings can be transformed into potential therapeutic applications.

nursing diagnosis for homicidal ideation: Nursing Care Plans - E-Book Meg Gulanick, Judith L. Myers, 2016-11-14 - NEW! Three all-new care plans include Readiness for Enhanced Decision-Making, Frail Elderly Syndrome, and Gender Dysphoria. - NEW! Enhanced QSEN integration includes expanded coverage of the QSEN initiative in the opening chapter, incorporation of QSEN language across care plan rationales, and a greater overall emphasis on the four key QSEN competencies: Patient- Centered Care, Teamwork and Collaboration, Evidence-Based Practice, and Safety. - NEW! Greater focus on interprofessional collaborative practice addresses the growing interest in interprofessional education and the Teamwork and Collaboration QSEN competency. - NEW! Expanded rationales now include physiological and pharmacologic effects and actions, the most current nursing interventions and medical treatments, lab values, evidence-based practice, QSEN competencies, and reference to national standards (TJC, CDC, AHA, ONS), nursing standards, and other professional standards. - NEW! Updated content throughout reflects the latest evidence-based assessments and interventions. - NEW! Detailed table of contents lists every nursing diagnosis addressed in Chapters 4 through 14 for easier navigation. - NEW! Improved design offers a more contemporary look that's easy to use. - NEW! Collaborative care map creator on the Evolve companion website helps you connect your Yoost & Crawford Fundamentals content with your care planning projects and clinical assignments. - NEW! Reorganized chapters and care plans include logical combinations and divisions of topics making it easier to navigate throughout the reference.

nursing diagnosis for homicidal ideation: Sparks & Taylor's Nursing Diagnosis Reference Manual Linda Phelps, 2019-11-25 This clearly written, easy-to-use reference manual delivers the evidence-based information nursing students and practicing nurses need to make confident diagnoses and construct care plans that meet patients' healthcare needs. The perfect reference for any clinical, classroom or simulation setting, this updated edition integrates the nursing process throughout and makes it easier than ever to access the latest NANDA-I nursing diagnoses. UPDATED! 2018-2020 NANDA-I diagnosis and standards, Nursing Interventions Classification (NIC) and Nursing Outcomes Classification (NOC) labels incorporated throughout reinforce clinical confidence and quality of care. NEW! 17 new diagnoses keep students on the cutting edge of nursing practice. UPDATED! QSEN competency icons throughout reinforce important considerations for safe care. UPDATED! Alphabetical organization helps students find diagnosis information quickly and easily. Selected Nursing Diagnoses by Medical Diagnosis (Appendix I) delivers clearly written, authoritative care plans for every stage in the life cycle. Related Factors sections strengthen students' diagnostic capabilities. Quick Reference tables list diagnoses by life stages for access at a glance.

nursing diagnosis for homicidal ideation: Nursing Diagnosis and Care Planning Barbara J. Taptich, Patricia W. Iyer, Donna Bernocchi-Losey, 1989 The 2nd Edition, organized according to NANDA's Human Response Categories framework, provides a quick reference for identifying nursing diagnoses. The definition, defining characteristic and related factors are provided for diagnostic categories. The 2nd Edition also includes care planning guides for high frequency medical diagnoses and a unique section on differentiating similar diagnoses.

nursing diagnosis for homicidal ideation: Nursing Diagnosis in Clinical Practice Kathy V. Gettrust, Paula D. Brabec, 1992 This book provides easy-to-use, comprehensive, and well-organized prototypes for care plan construction.

nursing diagnosis for homicidal ideation: Sparks and Taylor's Nursing Diagnosis Reference Manual Sheila S. Ralph, Cynthia M. Taylor, 2013-01-03 Sparks and Taylor's Nursing Diagnosis Reference Manual 9th edition provides clearly written, authoritative care plan guidelines for all 2012-2014 NANDA International (NANDA-I) approved nursing diagnoses. The book is full of bright colors, and organized by life-stages and type of care. Each Part opens with a new feature, Applying

Evidence-Based Practice, which responds directly to the content. Each NANDA diagnosis includes associated Nursing Interventions Classifications (NIC) and Nursing Outcomes Classifications (NOC), and the nursing process is integrated throughout. This book is the ideal resource for any clinical setting.

nursing diagnosis for homicidal ideation: *Manual of Psychiatric Nursing Care Plans* Judith M. Schultz, Sheila Dark Videbeck, Sheila L. Videbeck, 1994 This supplemental text of 54 updated nursing care plans addresses the most commonly encountered behaviors and behavior complexes in psychiatric and mental health nursing. The thoroughly updated Sixth Edition responds to current community-based care settings, across-the-lifespan care, cultural considerations, and violence in the community. Also, this edition presents a stronger focus on interdisciplinary care; community resources available to clients and their family/support groups; Web-based resources; communication content; and a sample assessment tool. DSM-IV-TR terminology/organization and NANDA diagnoses are used. and it includes a free disk with printable nursing care plans that students can customize!

nursing diagnosis for homicidal ideation: *Psychiatric-Mental Health Nursing* Jeffrey S. Jones, DNP, RN, PMHCNS-BC, CST, LNC, Joyce J. Fitzpatrick, PhD, MBA, RN, FAAN, Vickie L. Rogers, DNP, RN, 2016-03-22 Thoroughly updated to correlate with DSM-5 diagnostic descriptions and QSEN guidelines, the second edition of this highly acclaimed undergraduate psychiatric nursing text features concrete strategies for establishing interpersonal relationships as the basis not only for working with the psychiatric patient population, but as a timeless foundation for all nursing practice. The text guides students through the essential phases of self-discovery necessary to integrate interpersonal nursing theory into practice. Modules designed to foster growth in therapeutic use of self, including the importance of boundary management, are integrated with psychodynamic and current neurobiological theories to provide sturdy theoretical underpinnings for practice. A wealth of descriptive psychiatric diagnoses of DSM-5, QSEN criteria, and NANDA-based care plans, case scenarios, evidence-based practice, patient and family education tips, drug summary lists, and complementary and alternative therapy approaches populate the text. The main body of the book focuses on common mental illnesses and weaves both the psychodynamic and neurobiological concepts into evidence-based strategies for nursing interventions. Additional features, such as examples of therapeutic dialogue and a Consumer Perspective featuring an actual consumer voice relating personal experience about living with a specific illness, provide further guidance in understanding and adopting a relationship-based approach to nursing. Web links facilitate quick access to additional information and NCLEX-style review questions prepare students for passing the NCLEX exam. New to the Second Edition: Revisions correlate to DSM-5 descriptions, QSEN criteria, and NANDA nursing diagnoses Provides new information on psychopharmacology, compassion fatigue and a recovery model, use of informed consent, and cognitive behavioral therapy Presents updates on complementary and alternative interventions Includes expanded content on cultural and life span considerations related to mental health care worldwide Key Features: Focuses on interpersonal relationships and boundary navigation as the foundation for practice Promotes psychodynamic and neurobiological perspectives within ISPN curricular guidelines Written by national and international experts in nursing education and psychiatric-mental health practice Includes a digital student companion with key chapter concepts and critical thinking questions for practice situations Provides digital faculty resources including PowerPoint slides, an expanded test bank, case studies, and critical thinking exercises

nursing diagnosis for homicidal ideation: *Nursing Diagnosis Handbook* Gail B. Ladwig, 1997 Now in its third edition, this reference continues to be a unique tool for diagnosing clients and planning client care. Explains exactly how to formulate a nursing diagnosis statement using assessment findings and other pertinent data. NANDA-approved diagnoses. 3 illus.

nursing diagnosis for homicidal ideation: *Psychiatric Nursing* Mary Ann Boyd, 2008 The AJN Book of the Year award-winning textbook, *Psychiatric Nursing: Contemporary Practice*, is now in its thoroughly revised, updated Fourth Edition. Based on the biopsychosocial model of psychiatric

nursing, this text provides thorough coverage of mental health promotion, assessment, and interventions in adults, families, children, adolescents, and older adults. Features include psychoeducation checklists, therapeutic dialogues, NCLEX® notes, vignettes of famous people with mental disorders, and illustrations showing the interrelationship of the biologic, psychologic, and social domains of mental health and illness. This edition reintroduces the important chapter on sleep disorders and includes a new chapter on forensic psychiatry. A bound-in CD-ROM and companion Website offer numerous student and instructor resources, including Clinical Simulations and questions about movies involving mental disorders.

Icons in page margins indicate videos, audios, and animations on the Evolve companion website that may be accessed for enhanced learning. UPDATED illustrations include photographs of common nursing skills.

nursing diagnosis for homicidal ideation: Psychiatric-Mental Health Nursing Jeffrey Schwab Jones, Joyce J. Fitzpatrick, Vickie L. Rogers, 2012-03-16 Print+CourseSmart

nursing diagnosis for homicidal ideation: Lippincott's Manual of Psychiatric Nursing Care Plans Judith M. Schultz, Sheila L. Videbeck, Sheila Dark Videbeck, 1998 With this classic text, you'll discover the essential care plan models you need to enhance the consistency and effectiveness of your nursing care and to improve communication among the health care team. Complete coverage addresses the basic concepts, issues, and interventions that provide the foundation for psychiatric nursing practice; more than 50 psychiatric nursing care plans apply theory to real-world practice; behavioral approach addresses commonly encountered challenges and makes the text equally useful inside and outside the clinical setting; nursing process focus includes the latest NANDA diagnostic criteria; therapeutic goals link assessment data to expected outcomes; assessment parameters sharpen essential diagnostic skills; rationale for interventions provides the how and why for specific actions. New sections address guidelines for delivering culturally competent care and health promotion and early interventions for care-givers; outcomes-focused care sets specific goals for nursing interventions; multiplicity of care settings, including home care and partial hospitalization discuss the growing trend away from full-time hospital care; transitions into the community reflect today's changing health care environment; psychopharmacology content is fully updated to include the latest therapeutic agents and data.

nursing diagnosis for homicidal ideation: Nursing Diagnosis Reference Manual Sheila M. Sparks, Sheila Sparks Ralph, Cynthia M. Taylor, 1998 This pocket-size manual includes alphabetically organized entries within logical, life-cycle sections. This edition also includes 15 new community-based plans of care to help nurses work with nontraditional clinical placements. Plans of care have been revised to reflect the most recent NANDA conference. Also includes new guidance on how to use plan of care information in the development of clinical pathways.

nursing diagnosis for homicidal ideation: Psychiatric Nursing Care Plans Katherine M. Fortinash, Patricia A. Holoday-Worret, 1999 Logical organization, clear presentation, consistent use of nursing process, correlation of nursing and medical diagnoses--it all adds up to the highly esteemed new third edition of this practical reference. Using a practice-oriented, problem solving approach, it gives you 48 comprehensive, up-to-date care plans on disorders such as sexual dysfunction, eating disorders, dissociative identity disorder, and more.

nursing diagnosis for homicidal ideation: Psychiatric Nursing Norman L. Keltner, 2013-12-27 Learn the therapeutic skills you need for your role in psychiatric nursing care! Psychiatric Nursing uses a practical, three-pronged approach to psychotherapeutic management that clearly explains how to care for patients with psychiatric disorders. It emphasizes the nurse's three primary tools: themselves, medications, and the environment. Written by Norman L. Keltner, Carol E. Bostrom, and Teena McGuinness, each an educator and advanced practice nurse, this text covers the latest trends and treatments and provides a solid, real-world foundation for the practice

of safe and effective psychiatric nursing care. Unique! A practical three-pronged approach to psychotherapeutic management includes: 1) the therapeutic nurse-patient relationship, 2) psychopharmacology, and 3) milieu management. Unique! Norm's Notes offer helpful tips from the lead author at the beginning of each chapter, making it easier to understand difficult topics. Unique! Putting It All Together summaries are provided at the end of each chapter. Patient and Family Education boxes highlight information that should be provided to patients and families. Family Issues boxes highlight the issues families must confront when a member suffers from mental illness. Nursing care plans emphasize assessment, planning, nursing diagnoses, implementation, and evaluation for specific disorders. Case studies depict psychiatric disorders and show the development of effective nursing care strategies. Clinical examples from the authors' own experiences illustrate concepts with real-life clinical situations. Learning objectives at the beginning of each chapter preview the important principles to follow. Study Notes summarize each chapter's important content. Critical thinking questions help you expand your clinical reasoning skills. Suicide and Other Self Destructive Behaviors chapter identifies risk factors associated with suicidality and various forms and characteristics of self-mutilation. War Related Psychiatric Disorders chapter describes the symptoms and treatment options for posttraumatic stress disorder and traumatic brain injury patients. New approach for Introduction to Milieu Management chapter recognizes the shift of the therapeutic environment from inpatient units to community settings, plus nurses' changing roles. New approach for Nutraceuticals and Mental Health chapter focuses on foods that provide health and medical benefits. Student resources on the companion Evolve website include downloadable audio chapter summaries, NCLEX® examination-style review questions, psychotropic drug monographs, and learning activities.

nursing diagnosis for homicidal ideation: *Psychiatric-Mental Health Nursing* Sheila Videbeck, Sheila Videbeck, PhD RN, 2013-07-29 Succeed in your course and prepare for effective practice with *Psychiatric Mental Health Nursing: 6th Edition*. Focused throughout on helping you develop the skills and knowledge you'll need on the job, this practical book explores the full psychiatric nursing curriculum and gives you opportunities to practice specific nursing interventions, build therapeutic communication skills, and apply content within the framework of the nursing process. A study guide built into every chapter helps you master key concepts and build critical reasoning skills--Publisher's description.
