module 7 drivers ed: Communities in Action National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Population Health and Public Health Practice, Committee on Community-Based Solutions to Promote Health Equity in the United States, 2017-04-27 In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. Communities in Action: Pathways to Health Equity seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

module 7 drivers ed: Disposable People Kevin Bales, 2012-04-23 Slavery is illegal throughout the world, yet more than twenty-seven million people are still trapped in one of history's oldest social institutions. Kevin Bales's disturbing story of slavery today reaches from brick kilns in Pakistan and brothels in Thailand to the offices of multinational corporations. His investigation of conditions in Mauritania, Brazil, Thailand, Pakistan, and India reveals the tragic emergence of a new slavery, one intricately linked to the global economy. The new slaves are not a long-term investment as was true with older forms of slavery, explains Bales. Instead, they are cheap, require little care, and are disposable. Three interrelated factors have helped create the new slavery. The enormous population explosion over the past three decades has flooded the world's labor markets with millions of impoverished, desperate people. The revolution of economic globalization and modernized agriculture has dispossessed poor farmers, making them and their families ready targets for enslavement. And rapid economic change in developing countries has bred corruption and violence, destroying social rules that might once have protected the most vulnerable individuals. Bales's vivid case studies present actual slaves, slaveholders, and public officials in well-drawn historical, geographical, and cultural contexts. He observes the complex economic relationships of modern slavery and is aware that liberation is a bitter victory for a child prostitute or a bonded miner if the result is starvation. Bales offers suggestions for combating the new slavery and provides examples of very positive results from organizations such as Anti-Slavery International, the Pastoral Land Commission in Brazil, and the Human Rights Commission in Pakistan. He also calls for researchers to follow the flow of raw materials and products from slave to marketplace in order to effectively target campaigns of naming and shaming corporations linked to slavery. Disposable People is the first book to point the way to abolishing slavery in today's global economy. All of the author's royalties from this book go to fund anti-slavery projects around the world.

module 7 drivers ed: An Analysis of Hans J. Morgenthau's Politics Among Nations

Ramon Pacheco Pardo, 2017-07-05 Hans Morgenthau's *Politics Among Nations* is a classic of political science, built on the firm foundation of Morgenthau's watertight reasoning skills. The central aim of reasoning is to construct a logical and persuasive argument that carefully organizes and supports its conclusions - often around a central concept or scheme of argumentation. Morgenthau's subject was international relations - the way in which the world's nations interact, and come into conflict or peace - a topic which was of vital importance during the unstable wake of the Second World War. To the complex problem of understanding the ways in which the post-war nations were jostling for power, Morgenthau brought a comprehensive schema: the concept of "realism" - or, in other words, the idea that every nation will act so as to maximise its own interests. From this basis, Morgenthau builds a systematic argument for a pragmatic approach to international relations in which nations seeking consensus should aim for a balance of power, grounding relations between states in understandings of how the interests of individual nations can be maximized. Though seismic shifts in international politics after the Cold War undeniably altered the landscape of international relations, Morgenthau's dispassionate reasoning about the nature of our world remains influential to this day.

module 7 drivers ed: *Selecting the Mercury Seven* Colin Burgess, 2011-08-17 The names of the seven Mercury astronauts were announced in April 1959 amid a flurry of publicity and patriotism. This work provides biographical details of all thirty-two finalists for the seven coveted places as America's pioneering astronauts. All of the candidates were among the nation's elite pilots involved in testing new supersonic aircraft capabilities. Most had served as wartime fighter and bomber pilots; some were test pilots on top secret and sophisticated aviation projects, while others were fleet admirals, prisoners of war, and proposed pilots for spaceflight programs such as the Dyna-Soar (X-20). The names of all 32 finalists have been kept secret until very recently. *Selecting the Mercury Seven* also relates the history and difficulties behind the initial choice of candidates. The lives, motivations, military careers, and achievements of the unsuccessful twenty-five finalists are explored first in fully authorized biographies. Test pilots for the U.S. Navy, Air Force, and Marine Corps, each man has a fascinating and very different story to tell. All thirty-two men had to endure meticulous, demeaning, and brutal week-long medical examinations at the Lovelace Clinic in New Mexico. This was followed by another torturous week at the Wright Aeromedical Laboratory in Ohio, where they were subjected to extreme fitness and physiological testing, the sole purpose of which was to sort out the Supermen from the near-supermen. The final part of the book examines the accomplishments and spaceflights of the seven successful candidates, bringing their amazing stories right up to date.
