The advent of AIDS in the following decade, the widening spectrum of other newly-emergent diseases (from Ebola to Hanta virus), and the resurgence of old diseases such as tuberculosis and malaria all suggest that the threat of epidemic diseases remains at an historic high. The *World Atlas of Epidemic Diseases* provides a timely and scholarly review of over fifty of the most important such diseases at the start of the twenty-first century. This stunningly presented collection of maps, illustrations and commentary offers an authoritative overview of the global distribution of major epidemic diseases on a variety of spatial scales from the local to the global. The Atlas is arranged in an historical sequence, beginning with classic plagues such as the 'Black Death' and cholera and moving on through smallpox and measles to 'modern' diseases such as AIDS and Legionnaires' disease. Over 400 figures are incorporated, including 150 specially drawn maps supported by micrographs of the causative agents, photographs of the disease vectors, historical prints and graphs of changing incidence. The text for each disease includes discussion of its nature and epidemiological features, its origin (where known) and historical impacts, and its global status at the start of the twenty-first century. The book concludes with an informed look towards the future, assessing the probable impacts of major medical advances on life expectancy and the chances of success of programmes for the global eradication of diseases such as polio and measles. The *World Atlas of Epidemic Diseases* makes a major new contribution to our knowledge of the global burden of disease and is an informative and fascinating reference on the changing distributions of disease. It will be an invaluable resource for anyone interested in the spread, control and eradication of epidemic disease.

Benjamin Lee Wren, 2004 The scholarship of this book is based upon the personal experience of author Benjamin Lee Wren, who taught 'World Civilization' for six years at the high school level and 35 years at the university level. The book stresses that 'World Civilization' should be taught at all levels of academia because, due to the innovations of the last hundred years, the world has evolved into a 'global village.' The author firmly believes that one cannot have a true grasp of history without an active knowledge of geography and how it is affected by terrain, climate and neighboring countries. Key elements discussed are: the importance of writing techniques and examples of major systems; the foremost philosophies, religions, and turning points in history down to 1650; major contributions to world civilization; recommended source materials for both instructors and students; and various methods and techniques for creating and fostering enthusiasm within the classroom.

pacific rim countries map: Neo-statecraft and Meta-geopolitics Nayef R. F. Al-Rodhan, 2009 This book proposes an innovative and comprehensive framework for conducting statecraft in the 21st century. Called neo-statecraft, this framework is based on the reconciliation of power, interests and justice. The author proposes four substrates of neo-statecraft: 1) a new structure he calls meta-geopolitics, which includes seven inter-related dimensions of state power and identifies a Geostrategic Tripwire Pivotal Corridor (TPC); 2) a sustainable national security paradigm that stresses the centrality of justice, symbiotic realism and transcultural synergy; 3) a new concept called just power, which states that power must be smart as well as just, and that global justice is above all a national interest of all states; and 4) a new concept called reconciliation statecraft of the eight global interests. Dr. Nayef R.F. Al-Rodhan is Senior Scholar in Geostrategy and Director of the Programme on the Geopolitical Implications of Globalisation and Transnational Security at the Geneva Centre for Security Policy, Geneva, Switzerland. This book offers a refreshing and ambitious re-examination of the nature of statecraft and geopolitics and contains a number of relevant concepts that can be translated into brand-new research and ambitious policy goals. Building on a number of his previous concepts, the author continues a remarkable endeavour aimed at updating and adapting traditional geopolitical perceptions. Step by step, brick after brick, the author is clearly building a major comprehensive contribution to strategic thinking and diplomacy. Professor Francois Gere, Director of Research at Paris 3 Sorbonne Nouvelle and President of the French Institute for Strategic Analysis (IFAS), Paris, France. This book provides a carefully crafted description of how the international system is being transformed and defines the challenges facing contemporary statecraft in handling that transformation. Nayef Al-Rodhan has undertaken this enormous task by defining the concept of meta-geopolitics and addressing potential future problems while making full use of the analytical tools that he has developed. It is a unique and intellectually

courageous undertaking that will help us gain deeper insights into the many dimensions of current and future security challenges. Ambassador Rolf Ekeus, Chairman of the Stockholm International Peace Research Institute (SIPRI), Stockholm, Sweden.

This book examines the nature and extent of Asian business and related activity in Latin America. It shows how investment is not just from Japan and China, with Korea and India also involved, and with Taiwan directly competing with China. It explores activity in the minerals and energy sector, and also in trade and other areas. It demonstrates how Asian activity has a wide impact on the countries of both South America and the Caribbean, making them less exclusively the United States' backyard; how different countries are affected differently by Asian activity; and how the growing links with Asia increasingly open up the possibility of greater Latin American activity in Asia.

pacific rim countries map: *The Black Pacific Narrative* Etsuko Taketani, 2014-11-04 The Black Pacific Narrative: Geographic Imaginings of Race and Empire between the World Wars chronicles

the profound shift in geographic imaginings that occurred in African American culture as the United States evolved into a bioceanic global power. The author examines the narrative of the black Pacific—the literary and cultural production of African American narratives in the face of America's efforts to internationalize the Pacific and to institute a Pacific Community, reflecting a vision of a hemispheric regional order initiated and led by the United States. The black Pacific was imagined in counterpoint to this regional order in the making, which would ultimately be challenged by the Pacific War. The principal subjects of study include such literary and cultural figures as James Weldon Johnson, George S. Schuyler, artists of the black Federal Theatre Project, Langston Hughes, W. E. B. Du Bois, and Walter White, all of whom afford significant points of entry to a critical understanding of the stakes of the black Pacific narrative. Adopting an approach that mixes the archival and the interpretive, the author seeks to recover the black Pacific produced by African American narratives, narratives that were significant enough in their time to warrant surveillance and suspicion, and hence are significant enough in our time to warrant scholarly attention and reappraisal. A compelling study that will appeal to a broad, international audience of students and scholars of American studies, African American studies, American literature, and imperialism and colonialism.

pacific rim countries map: *Pacific Languages* John Lynch, 1998-03-01 Almost one-quarter of the world's languages are (or were) spoken in the Pacific, making it linguistically the most complex region in the world. Although numerous technical books on groups of Pacific or Australian languages have been published, and descriptions of individual languages are available, until now there has been no single book that attempts a wide regional coverage for a general audience. *Pacific Languages* introduces readers to the grammatical features of Oceanic, Papuan, and Australian languages as well as to the semantic structures of these languages. For readers without a formal linguistic background, a brief introduction to descriptive linguistics is provided. In addition to describing the structure of Pacific languages, this volume places them in their historical and geographical context, discusses the linguistic evidence for the settlement of the Pacific, and speculates on the reason for the region's many languages. It devotes considerable attention to the effects of contact between speakers of different languages and to the development of pidgin and creole languages in the Pacific. Throughout, technical language is kept to a minimum without oversimplifying the concepts or the issues involved. A glossary of technical terms, maps, and diagrams help identify a language geographically or genetically; reading lists and a language index guide the researcher interested in a particular language or group to other sources of information. Here at last is a clear and straightforward overview of Pacific languages for linguists and anyone interested in the history of sociology of the Pacific.

pacific rim countries map: *Race, Ethnicity, and Place in a Changing America, Third Edition* John W. Frazier, Eugene L. Tettey-Fio, Norah F. Henry, 2017-01-12 This book examines major Hispanic, African, and Asian diasporas in the continental United States and Puerto Rico from the nineteenth century to the present, with particular attention on the diverse ways in which these immigrant groups have shaped and reshaped American places and landscapes. Through both historical and contemporary case studies, the contributors examine how race and ethnicity affect the places we live, work, and visit, illustrating along the way the behaviors and concepts that comprise the modern ethnic and racial geography of immigrant and minority groups. While primarily addressed to students and scholars in the fields of racial and ethnic geography, these case studies will be accessible to anyone interested in race-place connections, race-ethnicity boundaries, the development of racialization, and the complexity of human settlement patterns and landscapes that make up the United States and Puerto Rico. Taken together, they show how individuals and culture groups, through their ideologies, social organization, and social institutions, reflect both local and regional processes of place-making and place-remaking that occur within and beyond the continental United States.
