vhl central answers french: Lenses and Waves Fokko Jan Dijksterhuis, 2006-01-20 In 1690, Christiaan Huygens (1629-1695) published *Traité de la Lumière*, containing his renowned wave theory of light. It is considered a landmark in seventeenth-century science, for the way Huygens mathematized the corpuscular nature of light and his probabilistic conception of natural knowledge. This book discusses the development of Huygens' wave theory, reconstructing the winding road that eventually led to *Traité de la Lumière*. For the first time, the full range of manuscript sources is taken into account. In addition, the development of Huygens' thinking on the nature of light is put in the context of his optics as a whole, which was dominated by his lifelong pursuit of theoretical and practical dioptrics. In so doing, this book offers the first account of the development of Huygens' mathematical analysis of lenses and telescopes and its significance for the origin of the wave theory of light. As Huygens applied his mathematical proficiency to practical issues pertaining to telescopes - including trying to design a perfect telescope by means of mathematical theory - his dioptrics is significant for our understanding of seventeenth-century relations between theory and practice. With this full account of Huygens' optics, this book sheds new light on the history of seventeenth-century optics and the rise of the new mathematical sciences, as well as Huygens' oeuvre as a whole. Students of the history of optics, of early mathematical physics, and the Scientific Revolution, will find this book enlightening.

vhl central answers french: The War on Cancer Guy B. Faguet, 2008-11-23 After reviewing the history of cancer and its impact on the population, Dr. Faguet exposes the antiquated notions that have driven cancer drug development, documents the stagnation in treatment outcomes despite major advances in cancer genomics and growing NCI budgets, and identifies the multiple factors that sustain the status quo. He shows that, contrary to frequent announcements of breakthroughs, our current cancer control model cannot eradicate most cancers and the reasons why. Significantly,

this book also delineates a way forward via a shift from the discredited cell-kill approach of the past to an integrated, evidence-driven cancer control paradigm based on prevention, early diagnosis, and pharmacogenomics. The author's views are based on data published in mainstream scientific journals and other reliable references, 432 of which are cited.

vhl central answers french: Engineering Thermofluids Mahmoud Massoud, 2005-09-16 Thermofluids, while a relatively modern term, is applied to the well-established field of thermal sciences, which is comprised of various intertwined disciplines. Thus mass, momentum, and heat transfer constitute the fundamentals of thermofluids. This book discusses thermofluids in the context of thermodynamics, single- and two-phase flow, as well as heat transfer associated with single- and two-phase flows. Traditionally, the field of thermal sciences is taught in universities by requiring students to study engineering thermodynamics, fluid mechanics, and heat transfer, in that order. In graduate school, these topics are discussed at more advanced levels. In recent years, however, there have been attempts to integrate these topics through a unified approach. This approach makes sense as thermal design of widely varied systems ranging from hair dryers to semiconductor chips to jet engines to nuclear power plants is based on the conservation equations of mass, momentum, angular momentum, energy, and the second law of thermodynamics. While integrating these topics has recently gained popularity, it is hardly a new approach. For example, Bird, Stewart, and Lightfoot in *Transport Phenomena*, Rohsenow and Choi in *Heat, Mass, and Momentum Transfer*, El-Wakil, in *Nuclear Heat Transport*, and Todreas and Kazimi in *Nuclear Systems* have pursued a similar approach. These books, however, have been designed for advanced graduate level courses. More recently, undergraduate books using an integral approach are appearing.

vhl central answers french: The Emperor of All Maladies Siddhartha Mukherjee, 2011-08-09 Winner of the Pulitzer Prize and a documentary from Ken Burns on PBS, this New York Times bestseller is “an extraordinary achievement” (The New Yorker)—a magnificent, profoundly humane “biography” of cancer—from its first documented appearances thousands of years ago through the epic battles in the twentieth century to cure, control, and conquer it to a radical new understanding of its essence. Physician, researcher, and award-winning science writer, Siddhartha Mukherjee examines cancer with a cellular biologist’s precision, a historian’s perspective, and a biographer’s passion. The result is an astonishingly lucid and eloquent chronicle of a disease humans have lived with—and perished from—for more than five thousand years. The story of cancer is a story of human ingenuity, resilience, and perseverance, but also of hubris, paternalism, and misperception. Mukherjee recounts centuries of discoveries, setbacks, victories, and deaths, told through the eyes of his predecessors and peers, training their wits against an infinitely resourceful adversary that, just three decades ago, was thought to be easily vanquished in an all-out “war against cancer.” The book reads like a literary thriller with cancer as the protagonist. Riveting, urgent, and surprising, *The Emperor of All Maladies* provides a fascinating glimpse into the future of cancer treatments. It is an illuminating book that provides hope and clarity to those seeking to demystify cancer.

vhl central answers french: Handbook of Optical Sensing of Glucose in Biological Fluids and Tissues Valery V. Tuchin, 2008-12-22 Although noninvasive, continuous monitoring of glucose concentration in blood and tissues is one of the most challenging areas in medicine, a wide range of optical techniques has recently been designed to help develop robust noninvasive methods for glucose sensing. For the first time in book form, the *Handbook of Optical Sensing of Glucose in Biological Fluids and Tissues* analyzes trends in noninvasive optical glucose sensing and discusses its impact on tissue optical properties. This handbook presents methods that improve the accuracy in glucose prediction based on infrared absorption spectroscopy, recent studies on the influence of acute hyperglycemia on cerebral blood flow, and the correlation between diabetes and the thermo-optical response of human skin. It examines skin glucose monitoring by near-infrared spectroscopy (NIR), fluorescence-based glucose biosensors, and a photonic crystal contact lens sensor. The contributors also explore problems of polarimetric glucose sensing in transparent and turbid tissues as well as offer a high-resolution optical technique for noninvasive, continuous, and accurate blood glucose monitoring and glucose diffusion measurement. Written by world-renowned

experts in biomedical optics and biophotonics, this book gives a complete, state-of-the-art treatise on the design and applications of noninvasive optical methods and instruments for glucose sensing.

vhl central answers french: The Great Deformation David Stockman, 2013-04-02 A New York Times bestseller The Great Deformation is a searing look at Washington's craven response to the recent myriad of financial crises and fiscal cliffs. It counters conventional wisdom with an eighty-year revisionist history of how the American state -- especially the Federal Reserve -- has fallen prey to the politics of crony capitalism and the ideologies of fiscal stimulus, monetary central planning, and financial bailouts. These forces have left the public sector teetering on the edge of political dysfunction and fiscal collapse and have caused America's private enterprise foundation to morph into a speculative casino that swindles the masses and enriches the few. Defying right- and left-wing boxes, David Stockman provides a catalogue of corrupters and defenders of sound money, fiscal rectitude, and free markets. The former includes Franklin Roosevelt, who fathered crony capitalism; Richard Nixon, who destroyed national financial discipline and the Bretton Woods gold-backed dollar; Fed chairmen Greenspan and Bernanke, who fostered our present scourge of bubble finance and addiction to debt and speculation; George W. Bush, who repudiated fiscal rectitude and ballooned the warfare state via senseless wars; and Barack Obama, who revived failed Keynesian borrow and spend policies that have driven the national debt to perilous heights. By contrast, the book also traces a parade of statesmen who championed balanced budgets and financial market discipline including Carter Glass, Harry Truman, Dwight Eisenhower, Bill Simon, Paul Volcker, Bill Clinton, and Sheila Bair. Stockman's analysis skewers Keynesian spenders and GOP tax-cutters alike, showing how they converged to bloat the welfare state, perpetuate the military-industrial complex, and deplete the revenue base -- even as the Fed's massive money printing allowed politicians to enjoy deficits without tears. But these policies have also fueled new financial bubbles and favored Wall Street with cheap money and rigged stock and bond markets, while crushing Main Street savers and punishing family budgets with soaring food and energy costs. The Great Deformation explains how we got here and why these warped, crony capitalist policies are an epochal threat to free market prosperity and American political democracy.

vhl central answers french: Graphics Recognition. Algorithms and Applications Dorothea Blostein, Young-Bin Kwon, 2014-10-08 This book presents refereed and revised papers presented at GREC 2001, the 4th IAPR International Workshop on Graphics Recognition, which took place in Kingston, Ontario, Canada in September 2001. Graphics recognition is a branch of document image analysis that focuses on the recognition of two-dimensional notations such as engineering drawings, maps, mathematical notation, music notation, tables, and chemical structure diagrams. Due to the growing demand for both off-line and on-line document recognition systems, the field of graphics recognition has an exciting and promising future. The GREC workshops provide an opportunity for researchers at all levels of experience to share insights into graphics recognition methods. The workshops enjoy strong participation from researchers in both industry and academia. They are sponsored by IAPR TC-10, the Technical Committee on Graphics Recognition within the International Association for Pattern Recognition. Edited volumes from the previous three workshops in this series are available as Lecture Notes in Computer Science, Vols. 1072, 1389, and 1941. After the GREC 2001 workshop, authors were invited to submit enhanced versions of their papers for review. Every paper was evaluated by three reviewers. We are grateful to both authors and reviewers for their careful work during this review process. Many of the papers that appear in this volume were thoroughly revised and improved, in response to reviewers' suggestions.

vhl central answers french: Louis Kahn Michael Merrill, 2010 It was not by chance that Louis Kahn's move into his profession's spotlight coincided with the crisis of modern architecture: representing, as his work increasingly did, those aspects of space which modernism had so ambitiously removed from its program. Kahn's rethinking of modern architecture's paradigm of space belongs to his most important contributions to the metier. In tracing the genesis of the unbuilt project for the Dominican Motherhouse we are given a close-up view of Kahn at work on a few fundamental questions of architectural space: seeking the sources of its meaning in its social, morphological, landscape and contextual dimensions. This rich and multivalent project opens the

way to a second section, which sheds new light on several of major works in a timely reappraisal of Kahn's work. The result of extensive research, illustrated with unpublished archival material and new analytic drawings, this affordable volume is an indispensable companion to *Drawing to Find Out*.
