Definition and Overview of Castration

Castration refers to the removal or destruction of the testicles, resulting in the loss of male reproductive function and a significant reduction in testosterone production. The act may be performed surgically or through traumatic means. When discussing “woman castrating a man,” the focus is on a female perpetrator and a male victim, which is a rare but notable subset of castration cases. This act may occur in various contexts, such as assault, revenge, or psychological compulsion. Understanding the definition is essential for grasping the medical, psychological, and legal frameworks surrounding the topic.

Types of Castration

Castration can be classified into several types, each with distinct motives and methods. These include:

- Surgical Castration: Performed with medical instruments, often under anesthesia
